it is a 10 crystal unit, why would you need a manual for a crystal unit? Not much to it, either the crystal is on or off. Manual must have been all of 4 pages back in 1970.

Try reading about scanners and scanning, Talking to toher scanner users,perhaps "breaking yourself in" on a cheaper scanner before you spend so much money. You seem to be unsure of what you really want - to are at high risk for disappointment -- you will be unhappy if you spend so much money, then find the radio doesn't meet your real interests.

I need advice on a decent basic handheld model for a B-day gift.
Monitoring local police, fire, Med (not trunked here, yet) and air freqs
(especially the air freqs).

Something moderately priced (for me) and not too cumbersome for a newbie.

Thanks in advanced.

3622. yupi mtv-7100 headphone socket problem

Newsgroup: rec.radio.scanner
Date: 2001-08-19 14:15:36 UTC
From: VDYB <anonymous@anonymous.invalid>
Message-ID: <9lohi4lvc1@plutonium.btinternet.com>
Source record: 61139

my mvt-7100 works fine when I use the built in speaker, but when I plug in headphones I get a lot of interference/loss of signal strenght that comes and goes as I move the headphone lead around. Is this normal or is there something wrong with my scanner? FWIW I made the modification to get a direct NFM discriminator output, I tried unsoldering it to see if that was the cause of the problem but it made no difference. :o(

cheers

Ricky

3626. AH-100 (AH-27)

Newsgroup: rec.radio.scanner
Date: 2001-08-19 16:58:36 UTC
From: wrenn_thomas@hotmail.com
Message-ID: <aa3b9f10.0108190858.611d49@posting.google.com>
Source record: 61144

Howdy folks. I'm still looking around for a AH-100 handheld CB to buy outright or barter a flawless Sony ICF-2010 for.

My second choice would be a UK-type AH-27, or one pro-modified to upset the communists over at the FascistCC!!

In my search I found a place in Illinois that actually has the AH-100 IN-STOCK for $199, but they're factory refurbished pieces minus the backlight feature.

I understand that was a design problem (but not a functional impediment) with the AH-100, so it's fair to assume that these are the consumer returns reworked for resale.

I'll call them on Monday and post the results, so those of you who might also be interested has a shot at getting one too. No doubt they'll go fast!

If I buy a unit, I'll rescind my request, but in the meantime my 2010 is factory perfect, and my cash is (still) good everywhere.

If [seriously] interested, or have comments you'd like to share, please drop me a direct line at wrenn_thomas@hotmail.com and Thanks!

Walt Bertram wrote on 14 Aug 2001

> How do you interface the Model 100 to the 895?

when i ordered it from grove, i got the cable to go with it. you need a 9pin to 25pin adapter, but it workes ok.

> I know the Model 100 has the RS232 port, but what programs run on it?
> Did you write your own in Basic?

currently debugging one now. because it's a bit painful to write large programs on the model 100, i writing (well, porting from the dos/linux/windows versions actually) a number of smaller ones for various operations. searching for freqs is separate from scanning.

i upgraded my model 100 to 32k, so 'unlimited' scanning actually has a number attached to it :)

i'll be releasing the all the various versions when i'm finished. the windows one will be about 600k with a simple gui interface...

Is there, or is there going to be trunked systems in your area?
If not then go with something more basic and save the money for accessories
:).

Get a radio that receives the most and has the most channels. You do not necessarily have to know what you are looking for before you buy. You may discover what you like once you start. I would have never thought listening to the dog catcher would be interesting until I put the county animal control freq in. It is hilarious when you hear them calling for backup, being pinned down by an ill-mannered cocker spaniel.

Cellular is out of the question, you need an older rig (pre 1994) to receive that band, and cellular is going away to PCS anyhow.
Cordless is going away to digital, spread spectrum and higher and higher up the spectrum where many scanners do not go. Aside from the morality some people pretend, it is not ethical to listen in on private conversations, and dull also. Would you like for them to listen in on you? On the other hand if you use an older cordless phone someone probably is. It is your morality, I will leave that to you.

Good luck

Try 902-907 & 925-928.. No set steps, or rules on bandwidth, etc....
I've had some that I had to go to WFM to understand them! Usually if you hear a one sided conversation on the low band, you can run up and search the hi band for the base, with both sides talking - OR - vise versa!! They seem to be equally split as to where you'll find the base unit (which usually seems to be much weaker, too, damn it).. It's the wild, wild, west trying to find the proper step, since different mfr's make their own rules, and I usually search at 5KHz.... It's slow, but..... And there's stuff around 1.2GHz, but I hear it's digital (:-<).....
Cheers & beers.

Hello,

RS is having a sale on Direct TV and I'm hoping the wife goes for it.
49.95US for dish and rx. plus free install. 31.50US/mo. for 105 channels.
I rent, but they can do "temp. mount" , it's just that I would have to pay
for re-install if we moved. Though I know this is totally OT, I would love to
hear comments, criticism, paraise, or whathave you on Direct TV. Any
thoughtr out there?

Also, does anybody know the freq. that it's on ? Which sat.?

TIA and Death to COX ! (Ihope)

Howdy,

I saw the post above for chases, etc.
But I thought there was also a site out there
where you could sample some of the odd
sounds we sometimes hear on scanners.
Does anybody remember this?

I looked up the part number and the cat. priced it at 40.00. But you could do better. Saw a outdoor scanner ant. at local store priced at 19.95. Stated coverage was 118-1300 (less than the 20-044) and no coax included. Not a dipole, Discone I think. # screw-in radials. Coax connect built in. You might want to check it out too.

FWIW,

Andrew

3642. PRO-43 Manual

Does anyone have a copy of the manual for the PRO-43 in .pdf format, or know where I can get a hard copy without having to go back to Radio Shack (if they even still sell it!)? I bought one replacement copy already and seem to have lost that also when I last moved. Thanks for any help rendered. You can reply here or to my email: cksx@mediaone.net.

Can we also get a rec.radio.scanners.aor please?

Now I realize that AOR scanners, like FA,WTB,FA,FS posts are on topic
to rec.radio.scanners but I don't want to read about AOR scanners. Why
should I have to read these AOR posts on here?

Please, don't ask me to use a filter. 99% of the posts in question
(AOR scanners) have the letters AOR in the header that can easily be
filtered by 99.99% of the newsreaders but I saw a post last year with
a header that gave not a hint it was about AOR. I DON'T WANT TO READ
THESE POSTS and you all should conform to my requests. You can just as
easily start a e-mail list or a new newsgroup for AOR scanners if they
are so damn important. That's what those lists are for, AOR and stuff
I don't want to read. Use them!

Before you ask, NO, I can't just look at the headers and ignore the
post I don't care to read. If I wanted to do that I would use a
filter!!!!

Thanks in advance.

The AR8000 has this horrible flat ribbon type cable which usually goes
to an interface box for the scanner. There is the genuine AOR box or
the Javiation one. Not sure which owuld be cheaper. The design of this
cable is very bad. It is almost fagile, so take care when using it, as
when I had one, I discovered the contacts on the ends of the cable are
easy to damage.
Thankfully AOR have had the sense not to use this design in later
models.

The for sale etc. posts were here long before the johnny-come-latelys who have been whining about them. If they don't want to read them, they shouldn't open these posts, or they should use a filter, or if they are compelled to open these posts because they can't control themselves, they should seek help. In any case, they oughta shut up already because most people probably just don't give a rat's patootie about those who don't want to read personal for sale etc. posts.

There's no need for another newsgroup, as another has pointed out, since it already exists.

When I go to the grocery store, I don't buy everything just
because it's on the shelf, I just choose what I want. Same
thing with TV; I watch only the shows I like. Nobody forces
me to do otherwise.

It's like a few people got upset because scanner newbies
asked a few questions that had been asked before, God forbid!
What has this world come to?

I have never understood the controversy surrounding these
posts. If someone doesn't want to read the, then they should
just pass them over, or filter them out (there's an idea).

I have purchased several good scanners here when I needed
them, otherwise I just read the posts that interest me.

As far as the rec.radio.swap group is concerned, I don't want
to plow through all that stuff for scanners, and I don't feel any
new groups are required, just new attitudes. Can we all say
"tolerance".

Scanner Digest Newsletter has been providing scanner enthusiasts
informative scanner information to our subscribers for close to three
years now. We are up to over 400 readers and have a staff of over 20
writers who provide regular regional and special feature columns.

We're looking for qualified candidates to join our all-volunteer staff
to submit articles of interest within the newsletter. Whether your a
newcomer to the hobby or you've been having fun for years, we invite
you to become part of our team.

We're primarily covering the Northeast Corridor area but will include
other areas as we continue to grow. Here's a list of areas we've
looking to fill gaps in our coverage area:

Western Massachusetts
Western Connecticut
Western New York State
Eastern Pennsylvania
Philadelphia Metro (PA)
Central Pennsylvania
Western Virginia
Southern Delaware-Eastern MD (Delmrava Peninsula)
Washington DC
North Carolina

We're also looking for writers who can submit material on the
following topics:

Amateur Radio
Marine
Civilian Aviation
News Media (TV-Radio-Newspaper)
Product Reviews (Equipment & Publications)

If you think you might be interested, please contact us here at
Scanner Digest HQs for consideration. If you're still unsure what
we're all about, your invited to receive a complimentary copy of the
Scanner Digest Newsletter for the asking. Look through our publication
and decide whether or not you would like to be part of our staff.
There's no obligation on your part and it's a great chance to check
out our newsletter prior to making a commitment.

Our all-volunteer staff members receive the Scanner Digest Newsletter
FREE as long as they are a member in good standing.

[snip]

And you don't find that annoyingly distracting? :-)

That practice by the grocery stores keeps getting me in trouble. My wife sends me to get bread or milk or a package of tofu. I wind up adding a box of donuts or (in season) Mallowmars, just because they're on the shelf.

But if I hide the Mallowmars when I get home, I'm just fine.

>I have never understood the controversy surrounding these
>posts.
[snip]

Having read a lot of those threads, I don't think there's really a controversy. I think it's just one individual who keeps complainging to E-bay and FA/FS posters' ISPs. He/she really needs to get a life.

>I have purchased several good scanners here when I needed
>them, otherwise I just read the posts that interest me.

I bought a scanner advertised here. A PRO-64 that I did not really need, was not really shopping for, but was delighted to get. If not for FS posts here, there would still be an aching empty spot in my scanning life.

I wanted some info for you guys I value your opinions as you are all probaly a lot more experienced than I am :)

I want to buy a new scanner and I have narrowed it down to a BC 245 or a Pro 92. I like these because they have trunking and are configurable with the computer. Is either of these a smart choice? Would an older scanner do just as well? I live in Alabama and the best I could find was that we DO have trunking. Does anyone else know this to be true? Should I be concerned with the option to use my pc with the scanner or is that hipe?

I found an older pro 51 at a pawn shop for 100 bucks would this be something I should look into.

and last what is cell images? Is it a round about way or hearing cell calls even tho the scanner has blocked them because they come in in a different area??

Many thanks!
Tj

Yes they are very different. They use different frequencies and both are illegal to listen to. You won't be able to hear either with any scanner made after 1994 unless it's modified. But listening to either is usually boring.

Source record: 61094

Yes, there's a big difference in cell phones and cordless phones -

Generally, cell phones use800 mhz frequencies (like 823.xxx / 851.xxx and 868.xxx / 896.xxx --- most of which is (now) digital anyway and impossible to listen to (until a manufacturer comes out with a scanner to decode it) - and as stated, the analog conversations that you CAN pick up are boring, and not worth the time -- you may hear a brief "pick up some butter on the way home from...." before the conversation is transferred to another cell site which your not listening to (the technology is too complex to explain here). Most new scanners sold are "cell blocked" meaning that you can't pick up those particular cell frequencies anyway. Older scanners were often modified to pick up analog cell phones when they (cell phones) were first popular.

Cordless 900 mhz phones primarily use 902.xxx / 907.xxx and 926.xxx / 927.xxx and 43 mhz cordless phones use 43.xxx / 46.xxx and 48.xxx / 49.xxx. Again, there are some digital and some analog - analog is cheap - digital is more expensive. Just about any scanner made (new or old) will pick up the 43 mhz phones which are mostly analog. These phones are still very popular with the general public and are the 'cheap' cordless phones you see advertised all over the place for $25 bucks or so - but cheap 900mhz phones are catching up... There are also 2.4 gig phones which can't be listened to via scanner. Cordless phones are not 'passed off' as cell phones are and you can hear the entire conversation - but again, why bother?

The above freqs are just general examples, for your 'edification' - not gospel.

Get a nice scanner for police (until they go digital too that is) and other services such as fire, rescue, EMS, etc. There's plenty of stuff to listen to without worrying about cordless phone junk - which listening to (to me anyway) is a pure invasion of privacy.

Check with your local Radio Shack to see if the police departments in your area use a trunk system or not, or you may end up with the wrong scanner for police and government activities.

HTH -

John

Go to this web page and had a look: http://strongsignals.net/bc780xlt/
There is a message board also. I got one in February. I like it EDACS works well. You can do several trunk systems and conventional scan at the same time. Note: This scanner is not for the VCR challenged. The manual is pretty advanced, they don't highlight every button push too well. There are third party supplied programming software packages. Read the message board for critiques.

Yes.

The Nevada Double Discone (technically a bicone) will have a flatter
radiation pattern and will get you considerable gain over a discone.

See:

http://www.radiobooks.com/products/ant426.htm

For info.

Now if you want a directional antenna, you can get a log-periodic
(also known as a log-periodic dipola array or LPDA). A TV antenna
is a type of log-periodic.

HRO sells Create log-periodics, as does Grove. See:

http://www.grove-ent.com/ANT17.html

or the HRO catalog for info.

From my experience it is a great reciever. I would recommend the Scan*Star 780 software if you are going to run it from a pc.

Cool, currently I have a diamond discone.. Where are this company based that
sell the double discone ? Im an Aussie (Australia)

Also is there such a thing as a wideband AMP ?

The double discone is in fact a vertical. The log
periodic can be mounted vertically. So, even if you
are anally retentive, the answer is still yes.

I use a double discone... I think I know what kind of
antenna it is. Did you even bother to look at it?

Three universal truths about newsgroups:

1. No matter what you say, you will always start an argument;
every post will result in a ridiculous off-topic flame-fest.
2. There will always be whining and people whining about whining.
3. There is always somebody more ignorant than you can imagine
who is bent on proving it.

Everybody gets his turn to try to fix it, but it never has any positive
effect. Thanks for taking your turn, Rob...my glass house is already pretty
drafty. Next!

I don't have a VTVM, although I sure wish I did. They do come in handy.

Nowadays, if you mention "VTVM" to a youngster, they'll think you are talking
about some bubble-gum teenybopper rock/pop band!

Paul.

Liberty is the one thing you cannot have unless you give it to others.

They CAN be unblocked by the manufacturer, but you have to prove that you have the legal right to receive those frequencies; generally that is limited to law enforcement.

Paul.

I've written and release some free software for the Pro-92. It's
Windows-based (GUI), and from what I can tell, should replace the
not-for-free programs.

It's available at http://www.starrsoft.com/freeware/win92/index.html

Documentation is non-existent, but email me with any questions.

I don't think the manufacturers unblock them, they just don't block
them in the first place for sale outside of USA and to authorized
agencies within the USA.

The question you need to answer is do you know the difference between a vertical and vertical polarization?

I do. A double discone is not a vertical antenna it is a vertical polarized double discone antenna. A log periodic mounted for vertical polarization is not a vertical antenna it is a log periodic antenna mounted for vertical polarization.

The answer is still NO regardless of your anal misinterpretations of what a vertical antenna is. :-)

Time out. Put your weenie back in your pants and stop waving it
around, because it is impressing no one.

Mr. Rosen asked a question because he wanted information, not because
he wanted to watch a pissing contest. Assuming he is actually still
there...

He wanted to know about a "vertical" that was wideband and could
outperform the Diamond discone he mentioned. Now, you can
interpret that as narrowly as you like... but the discone is a
vertical monopole variant; the bicone (Double Discone) is
a vertical dipole variant; and the vertically polarized LPDA
will pick up the signals he is interested in.

Now, anyone who has read this group for say, more than 5 minutes,
knows that language used here is imprecise. Now, unless Mr. Rosen
wants to know about a mag-mount or mobile antenna, I think my
answers were helpful. Your one word answer, by contrast, was not.

Mr. Rosen, assuming you are still out there, I stand my my original
statements. If you want an omni wideband vertical with gain over
a discone, your best shot is a Double Discone. You won't get a
HUGE amount of gain, but you will get some.

However, if you want a LOT of gain, you will have to sacrifice
something by adding directionality. The LPDA will get you that,
and in many cases that is the desired way to go.

Radio-ware carries the Double Discone. HRO carries two variants
of the Create LPDA. Grove carries only the cheaper one, relatively
speaking.

Those web sites are:

http://www.radiobooks.com/products/ant426.htm

http://www.grove-ent.com/ANT17.html

Hopefully this provides you with the INFORMATION that you were
looking for.

Best of luck,

Eric

So, they are all vertical polarized antennas but not verticals.

> Now, anyone who has read this group for say, more than 5 minutes,
> knows that language used here is imprecise. Now, unless Mr. Rosen
> wants to know about a mag-mount or mobile antenna, I think my

Mr Rosen said he wanted to get rid of his discone for a
wideband vertical. You offer another discone and a large beam and not
a word about a vertical.

> Mr. Rosen, assuming you are still out there, I stand my my original
> statements. If you want an omni wideband vertical with gain over
> a discone, your best shot is a Double Discone.

Which is not a vertical but a dipole mounted vertical. Works okay but
still not a vertical.

> You won't get a
> HUGE amount of gain, but you will get some.
>
> However, if you want a LOT of gain, you will have to sacrifice

> looking for.

Too bad you didn't offer him some information on vertical antennas
like he asked. Maybe your information will change his mind as to what
kind of antenna he wants and convince him that a decent wideband
vertical doesn't exist.

So rather than get into your juvenile talk about body parts why not
explain that there isn't a wideband vertical but there are other
vertical polarized antennas that may or may not work for him?

So yes, the answer is still NO.

Are you sure its out of production? I just say it advertised in MT just
last month. You might want to check Groves website but I think its still
available.

George,

Yes, Grove-Ent confirmed it is no longer available. I'm trying to update the database per their review in MT 2 years ago but have yet to find where the FCC database is kept.

I may have miss understood. What I was refering to is the August 2001 MT Issue in the "What's New" colume. There is a review/ad for the "Grove Military Frequency Directory" which is on CD, part number SFT31.

Now I just went back to the grove site and they do have listed the "2001 Super Frequency List on CD-ROM" part number SFT26-01, is that was has already been discontineud? Or are you talking about something older than that...

3748. Beginner question

Newsgroup: rec.radio.scanner
Date: 2001-08-21 19:17:46 UTC
From: Jason <metty@Karson.com>
Message-ID: <utyg7.24946$P15.13751731@news1.rdc1.sfba.home.com>
Source record: 60963

I have always had an interest in scanners and I aim to get one soon to play around with. I have one question about them. I live about 3 miles away from my work and we use those big bulky motorola 2 way radios to communicate with. I know we have at least one amp (or whatever it is called) mounted in the middle of the building to make them clearer. My question is would a typical scanner be able to pick them up from my home? What type of scanner would I need? Their isn't any private information on these radios so I'm sure my work wouldn't mind it.(actually my boss was interesting in the idea and challenged me to do it)
Thanks for any help

Yes, you flamed me first anal retentive one, try and be truthful in
your folly. You also can only guess what the poster wanted and why
when he asked for a wideband vertical scanner antennas that will
receive better than the diamond D130J. The answer is no, there
isn't a wideband vertical scanner antennas that will receive better
than the diamond D130J.

It was so nice of you to offer alternatives, that is the beauty of
these discussions, but the answer is still NO, there IS NOT a wideband
vertical scanner antennas that will receive better than the diamond
D130J.

Still wonder if you know the difference between a vertical and a
vertically polarized antenna.

I don't know if that's true or not; but if it's true, you shouldn't quote
the same link in your warning followup.

3757. RADIO MART

Newsgroup: rec.radio.scanner
Date: 2001-08-21 23:54:54 UTC
From: Dean Kastoris <n8ihs@home.com>
Message-ID: <3B82F425.117DB32E@home.com>
Source record: 60973
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.scanner

This is a followup to my complaints regarding Radio Mart. After direct e-mail conversation with Martyn at Radio Mart, all issues are currently being resolved. Regardless of what each of us feels about the situation, Martyn has been more than accomodating in this matter and I certainly appreciate it. If I had to do this again, I would have settled this matter as I am in the process of doing,(via direct e-mail)but without using the newsgroups as a weapon. Anyone thinking of buying radio equipment should consider Radio Mart.

Cross-posted to: rec.radio.swap,rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.scanner

If you have a need for an SMA-TO-BNC antenna adapter that is custom
made to fit and protect your H.T. or scanner radio, I have the solution.

Adapter allows you to:
Quickly change antennas to base,mobile or different style use.
Use the more popular and wider selection available of BNC antennas.
Prevent chassis connector wear or from coming loose due to antenna
changes.

Adapter features:
Gold plated contacts with a teflon insulator.
A low profile design with a rubber covering for a factory antenna look.
The rubber base seals to the top of the radio with no spacers needed
for moisture and dirt protection.
The base also provides an excellent support for any length of antenna
or application.
No need to remove adapter once installed to make a quick and safe
antenna change.

Sizes to fit radio models:
Yaesu: VX-5, VX-1, FT-50-R, VX-10, VX-150, VX-110, VXA-100, VXA-120
Icom: IC-T8A, IC-T81A, IC-Q7A, IC-R2
Kenwood: TH-D7, TH-G71
Alinco: DJ-V5
Radio Shack: HTX-200, HTX-400, HTX-245
Aor: AR-16

Previewed in the May 2000 Issue of CQ Magazine, and the Nov. 2000 Issue
of QST Magazine.

$11.95 + $1.50 S+H(One to unlimited)
(Check or money order only in U.S.Funds)
(Specify radio model when ordering)

STEPHEN G.GULYAS
706 LALOR ST.
TRENTON, N.J. 08610

>out. Are you aware of this??
>

Interesting question. That is one I had not considered. If the antenna jack
IS polarized, then that would explain why my incoming signals are always
attenuated when I plug in an external antenna.

Paul.

Liberty is the one thing you cannot have unless you give it to others.

Of course, if you don't have the luxury of triangulation, you can use a
hand-held scanner or HT to get you into the general area. Once you get a
strong signal, remove the antenna and put the radio next to your chest. The
radio becomes a type of directional antenna, you body acting as a reflector.

You can then triangulate using others' radios in a similar fashion.

We use this method in fox hunts.

Paul, N0JAA

Liberty is the one thing you cannot have unless you give it to others.

it's not like either of these 2 groups are very high posting volumes
anyway. How hard can it possibly be to sift through a few undesirable
posts of this type to get to the real discussions?

I'm for allowing them to stay in these groups myself. What if I
someday want to add another scanner to my collection (like a trunk
tracker)? Based on reviews from others in these NG's, I would already
have an idea what to look for. From there, it would just be a matter
of seeing somebody post a message that they are offering one of
their's for sale.

I really wouldn't want to check out some other NG that I wouldn't
normally subscribe to and feel the need to download ALL headers just
to find a scant few that are still on the market and interest me.

hey, i'm new to this newsgroup, and have never posted before..... i'm wanting to buy my first scanner, but i'm not sure what i should buy. my problem is that i dont know which scanner to buy.... i dont want something which is bottom of the line and i'll outgrow quickly, but at the same time i dont want something so expensive that it contains features which may never be used or are not worth it.... so i'm basically asking for suggestions on a mid-level or so scanner which leaves room for future use and isnt too expensive... model, price, where to buy? thanks.

3772. Alienate and the hobby suffers

Newsgroup: rec.radio.scanner
Date: 2001-08-22 07:11:56 UTC
From: Chuck <manifan@yahoo.com>
Message-ID: <0XIg7.1189$q7.129224@typhoon1.gnilink.net>
Source record: 60989

Hi all,

Just wanted to know why even in scanner listening, why people fight? I have been there as a novice and couldn't find many answers when I first started with scanners. I guess now I would be considered above average in my knowledge of scanners, but by no means an expert.

In helping novices it seems everyone wants to "prove their worth" and start technical bullpucky or answer questions without regard to WHO they are talking to. This may well turn off new people to the hobby. Sure some questions may seem technical in nature but I don't think the newbies want great technical answers, they just want to know what WORKS. Adding a few lines as an aside about technical specs. is okay but having 37 people continually fight long after the original question is childish. It's about time people grow up.

A lot of people just send a message that says I have this radio or this antenna and it works great. This gives a list of potential products for a newbie. All installations are different and what works for one person may NOT work for others.

A good thing might be to develop a "standard" list for this newsgroup that isn't technical about different items. When someone asks about buying a scanner, this list might include things like "what do you want to listen to", "where do you live? urban/suburban/boonies?". Less radio traffic might lend someone to only need a 200 channel scanner as opposed to 500 channels etc.

In closing, I just want to say that I have picked up more information via posts here, than most anywhere else. Let's try to help rather than do battle, I mean it's ONLY scanner listening and should be enjoyable.

Best Regards,

Chuck
btw anyone from New Jersey and want to hook up for some scanner talk, frequency stuff etc? I use ICQ, if you have it my number is 81211457. Or take out (nospam) in the email address to write me directly. Thanks

The biggest thing to figure out first is what you want to scan. Then
find out what frequencies you need, and whether you've got to deal
with trunking.

You should be able to find that out by poking around the web, or by
asking specifically around here.

Other things to consider are whether you want to just enter
frequencies that others have found, or if you want to search yourself.
Or if you want a base vs mobile vs handheld radio.

There is a lot of good information on Rich Wells' site,
www.strongsignals.net. FAQs for beginners, reviews of what seems to
be every scanner ever made. I think if you browse there you'll be
able to think of what you want to do with a scanner, and get a feel
for what price range you get into for different features.

Catching a sale at Radio Shack is IMHO a great way to get more radio
than you would otherwise afford. Keep an eye on the sale flyers.

>The CD is out of production but I recall reading in MT that the database
>can be updated by downloading the frequency list from an FCC FTP site.

Andy,

The article was in the February, 1999 MT issue ... the "Computers and Radio"
column by John Catalano.

The site mentioned was:
www.fcc.gov/oet/info/database/raeddf.html

John's article implied that one file of about a gigabyte could be downloaded
periodically to update the database. No other information was included.

Please let us know how you make out with updating the files.

Hi,
I am currently in the process of creating www.radio-scanner.co.uk
which hopefully will be a site for British Scanner and Radio stuff
with plenty of portals. Currently im having problems with the server
and the site is not working totally perfect but im slowly bringing it
into shape. But really this is almost a Alpha version of the site. I
wasn't actually going to host it until i had got it in decent shape
but decided that I wanted to attract people to help with it. If anyone
has time to volounteer to help with the site and content it would be
great. Particularly for people to write articles and reviews.
Please contact me
Thanks
Ric - M1ENZ
Doncaster, England

As long as there are two people on the planet, there will be differences in opinions (odds go up 100/1 if both sexes involved). Differences in opinion can be GOOD, because yours might be wrong (8-0), and it could save you some grief (or face) later. Of course there's always the rectal cavities that resort to character attacks, replies totally void of any applicable and/or useful information, and other sophomoric b/s - even critique someone's language when if fact it may be the posters 2nd or 3rd, etc., etc... Ever notice you can't read a doctors handwriting? Sort the fly dung from the pepper, and continue on!

As far as answers being too technical, it begs the question: too technical for whom? If someone asks, "how does a widget WORK?" and another says, "my Ajax widget WORKS fine.", it may satisfy one of your quests for a recommendation on something that WORKS - But, you still don't know squat about why it WORKS better than a Acme widget, how to make it WORK better than your dorky neighbors, or how to make it WORK at all in many cases; which, some inquiring minds appreciate! If it's over your head, ignore it, or dig a little deeper and expand your knowledge base so you can trash the next idiot that asks the question (:->). No big deal! Otherwise we'd need some sort of test to determine the posters SIQ (scanner intelligence quotient) before he'd be allowed to join the group, and it would be displayed beside the username (ala eBay). Then anyone answering could scale the reply content up/down to match that individuals SIQ, with the stipulation that the answering user not exceed his own SIQ! Any volunteers??

Quite frequently, it leads to some amusing threads when two, or more, self proclaimed experts (drawn from 'ex', a has been, and 'spurt', a drip under pressure) get into a upwind urinating contest! True, sometimes it seems like it's going to pollute the well water; but, until we get the SIQ up and running, it's just another one of life's warts, and a minor one at that.

Go through the questions, testimonials, trolls, and replies until one WORKS for you. Like you said, what WORKS for one doesn't necessarily WORK for another, which usually makes "standard lists" somewhat vague. There are dozens of places to get primers on any activity, including scanning.

Cheers & beers y'all...
Don

>it) Thanks for any help

First, look for labels on the radios themselves that may give you either a
range of frequencies or a specific frequency. Then, head to Radio Shack
and check out their scanner selection for something that will receive in
the right range.

If that fails, track down a frequency counter, and use it to find the
frequencies they're using. Look around for someone with callsign license
plates, and ask them how to get in touch with the local amateur radio
clubs. Someone at one of the meetings is likely to have a counter they'd
be willing to check out one of your radios with.

Neil
If you are happy with a Yupi 7100 then you are obviously either very easily pleased or never had a decent scanner to compare the 7100 against.
It was the biggest load of crap I ever owned, I couldn't get rid of it quick enough.
Vinnie.

Most PRO series RS scanners are made by Uniden. If you seen shoddy assembly, blame Uniden, not Tandy. Tandy outsources most of it's manufacturing these days.

It is a great receiver. I use it for all my conventional scanning as
well as for listening to a motorola trunked system and an EDACS
trunked system. It handles its tasks flawlessly. As a previous
poster indicated, the learning curve is significant, but the payoffs
are great. It's my first scanner with built-in ctcss and dpl
capability and that alone makes conventional scanning far more
pleasant. It is an extremely capable aircraft monitoring receiver.

I have used WinScan (didn't like it), Andy's Free Program (worked
fine for database management with excel), ARC780 (excellent database
management software) and TrunkStar780. I have settled on TrunkStar780
for all my needs with the BC780XLT. It does everything it says it
will. It has a nice control interface that is intuitive and it
handles frequencies, trunking talkgroups, and alpha tag management
with ease.

The only knock on this receiver in my opinion is the somewhat
restricted internal audio. An external speaker is necessary to get
comfortable room-filling audio and easily improves that situation
greatly.

I am enjoying this scanner greatly, I don't think you will be
disappointed.

Ender

cdpd you can hear. it ISN'T DIGITAL, it is a encrypted analog signal transmitting on a old analog cell phone. To be percise, Here where I am. they used modified motorola brick phones. But others use other things. specific cell channels are dedicated with the cell phone company for this to work. Gee. even go to any scanner site that has data signals in wav files. you can even find ONE CDPD audio file there. I have seen them on many sites. it is not DIGITA. and I or anyone else DOES not need to be a friggin GENIOUS to hear it. You may not be able to decode it. but NO one HAS to be smart to HEAR it.

Matter of pure fact - I have owned over 20 scanners through the years
and my choise for pure scanning quality is a Yupi 9000 Mk2. I doesn't
trunk, but I dont need trunking. And it and the 7100, clip the wings
from my BC780XLT, my BC9000, my Pro-92, my Pro 2006.

In addition, your company should also have an FCC license to use the radios which should list the frequencies. Many times it's hanging right on the wall near the base console.

Just remember that coming into a news group is like walking
into a bar. You will find all of the same types of people you
find elsewhere else in life. Just because they like scanners makes
them no different.

There are "know it alls" who are more interested in impressing you
with their technical knowledge then answer your question. There
are also people who are profoundly mentality ill, etc. in the same
percentages as the rest of the general population.

Of course, the anonymity associated with news groups tends to
enhance the poor behavior of these people.

Just remember that everyone here only because they have access
to a PC. They have no power over any aspect of your life, so
don't let them bother you.

Thankfully, when the dust setteles, you will find mostly good
decent people who are willing to help you.

Look at the Radio Shack PRO-92. 500 channels, text tags, trunks
several different systems. Computer interface for loading and storing
setups; there are good inxpensive alternatives to Radio Shack's
official software.

Lists for $350, but periodically goes on sale for $200 or $250.

Well supported by a community that hangs out at pro-92.com.

Does not have military air bands, which is a minus if you live near an
airbase.

Definitely go to Wells' site to compare features.

FOLLOW THE INSTRUCTIONS

How to invest $6.00 and turn it into thousands.
If everyone justs sends $6.00 And posts to at least 200 groups, we will all be happy!!!!!!! Happy all the way to the BANK!!!!!!! I found this posted in another group and thought I'd try it just for a laugh. Guess what? I'm laughing the whole way to the bank. I already earned $2,500 in almost 3 weeks! Following is that original post. Take a minute to read it. I'm telling you--I'm a very skeptical, but even a skeptic likes to make money. And the initial investment is insignificant....LESS THAN $8.00!!!

Awhile back, I was browsing these newsgroups, just like you are now, and came across an article similar to this that said you could make thousands of dollars within weeks with only an initial investment of $6.00 plus stamps! So I thought, "Yeah, right, this must be a scam!" But like most of us I was curious and kept reading. It said that if you send $1.00 to each of the 6 names and addresses listed in the article, you could make thousands in a very short period of time. You then place your own name and address at the bottom of the list at #6, and post the article to at least 200 newsgroups. (There are about 32,000 of them out there and that's quite a large market pool). No catch, that was it. Even though the investment was a measly $6, I had three questions that needed to be answered before I could get involved in this sort of thing.

1. IS THIS REALLY LEGAL?? I called a lawyer first. The lawyer was a little sceptical that I would actually make any money but he said it WAS LEGAL if I wanted to try it. I told him it sounded a lot like a chain letter but the details of the system (SEE BELOW) actually made it a legitimate legal business.

2. IS OK WITH THE POST OFFICE OR IS IT MAIL FRAUD?....I called them: 1-800-725-2161 and they confirmed THIS IS ABSOLUTELY LEGAL! (See Title18, h sections1302 NS 1341 of Postal Lottery Laws). This clarifies the program of collecting names and addresses for a mailing list.

3. IS IT MORAL? Well, everyone who sends me a buck has a good chance of getting A LOT of money ... a much better chance than buying a lottery ticket!!!

So, having these questions answered, I invested EXACTLY $7.92 ... six $1.00 bills and six 32 cent postage stamps ... and boy am I glad I did!!! Within 7 days, I started getting money in the mail! I was shocked! I figured it would end soon and didn't give it another thought. But the money continued coming in. In my first week I made between $20 to $30. By the end of the second week I had a made a total of $1,000.00. In the third week I had over $10,000.00 and it was still growing. This is now my fourth week and I have

made a total of just over $42,000 and it's still coming in .....

It's certainly worth $6.00 and 6 stamps !!! Also, make sure you print a copy of this article NOW, so you can get the information off of it as you need it. I promise you that if you follow the directions exactly, that you will start making more money than you thought possible by doing something so easy! Suggestion: Read this entire message carefully! (print it out or download it.) Follow the simple directions and watch the money come in! It's easy. It's legal. And, your investment is only $6.00 (Plus postage)

IMPORTANT: This is not a rip-off; it is not indecent; it is not illegal; and it is virtually no risk - it really works!!!! If all of the following instructions are adhered to, you will receive extraordinary dividends. PLEASE NOTE: Please follow these directions EXACTLY, and $50,000 or more can be yours in 20 to 60 days. This program remains successful because of the honesty and integrity of the participants. Please continue its success by carefully adhering to the instructions. You will now become part of the Mail Order business. In this business your product is not solid and tangible, it's a service. You are in the business of developing Mailing Lists. Many large corporations are happy to pay big bucks for quality lists. However, the money made from the mailing lists is secondary to the income which is made from people like you and me asking to be included in that list.

HERE ARE 4 EASY STEPS TO SUCCESS: ----------
STEP 1: Get 6 separate pieces of paper and write the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." Now get 6 US $1.00 bills and place ONE inside EACH of the 6 pieces of paper so the bill will not be seen through the envelope (to prevent thievery). Next, place one paper in each of the 6 envelopes and seal them. You should now have 6 sealed envelopes, each with a piece of paper stating the above phrase, your name and address, and a $1.00 bill. What you are doing is creating a service. THIS IS ABSOLUTELY LEGAL! You are requesting a legitimate service and you are paying for it! Like most of us I was a little skeptical and a little worried about the legal aspects of it all. So I checked it out with the U.S. Post Office (1-800-725-2161) and they confirmed that it is indeed legal! Mail the 6 envelopes to the following addresses:

#1) J. Gibson P.O. Box 2099 Vineyard Haven, MA 02568

#2) N.Winkler 934 Roseland Ave. NW Massillon, OH 44647

#3) P. Brazil 508 11th. St. NW. Apt. G Puyallup, Wa. 98371

#4) Jose Aviles P. O. Box 446, Fort Drum, NY 13603

#5) J.R. Robertson P.O. Box 334 Ellettsville, IN 47429

#6) R.Flames P.O. Box 771331, Orlando, FL. 32877-1331

STEP 2: Now take the #1 name off the list that you see above, move the other names up (6 becomes 5, 5 becomes 4, etc...) and add YOUR Name as number 6 on the list.

STEP 3: Change anything you need to, but try to keep this article as close to original as possible.

STEP 4: Now, post your amended article to at least 200 newsgroups. (I think there are close to 32,000 groups) All you need is 200, but remember, the more you post, the more money you make!

This is perfectly legal! If you have any doubts, refer to Title 18 Sec. 1302 & 1341 of the Postal lottery laws. Keep a copy of these steps for yourself and, whenever you need money, you can use it again, and again.
PLEASE REMEMBER that this program remains successful because of the honesty and integrity of the participants and by their carefully adhering to the directions. Look at it this way. If you are a person of integrity, the program will continue and the money that so many others have received will come your way.

NOTE: You may want to retain every name and address sent to you, either on a computer or hard copy and keep the notes people send you. This VERIFIES that you are truly providing a service.
(Also, it might be a good idea to wrap the $1 bill in dark paper to reduce the risk of mail theft.) So, as each post is downloaded and the directions carefully followed, six members will be reimbursed for their participation as a List Developer with one dollar each. Your name will move up the list geometrically so that when your name reaches the #1 position you will be receiving thousands of dollars in CASH!!! What an opportunity for only $6.00 ($1.00 for each of the first six people listed above) Send it now, add your own name to the list and you're in business!
========== ---
DIRECTIONS --- FOR HOW TO POST TO NEWSGROUPS --- DIRECTIONS ---
==========
Step 1) You do not need to re-type this entire letter to do your own posting. Simply put your cursor at the beginning of this letter and drag your cursor to the bottom of this document, and select 'copy' from the edit menu. This will copy the entire letter into the computer's memory.

Step 2) Open a blank 'notepad' file and place your cursor at the top of the blank page. From the 'edit' menu select 'paste'. This will paste a copy of the letter into notepad so that you can add your name to the list.

Step 3) Save your new notepad file as a .txt file. If you want to do your postings in different settings, you'll always have this file to go back to.

Step 4) Use Netscape or Internet explorer and try searching for various newsgroups (on-line forums, message boards, chat sites, discussions.)

Step 5) Visit these message boards and post this article as a new message by highlighting the text of this letter and selecting paste from the edit menu. Fill in the Subject, this will be the header that everyone sees as they scroll through the list of postings in a particular group, click the post message button. You're done with your first one!

Congratulations...THAT'S IT! All you have to do is jump to different newsgroups and post away, after you get the hang of it, it will take about 30 seconds for each newsgroup! **REMEMBER, THE MORE NEWSGROUPS YOU POST IN,

THE MORE MONEY YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 200**
That's it! You will begin receiving money from around the world within days! You may eventually want to rent a P.O.Box due to the large amount of mail you will receive. If you wish to stay anonymous, you can invent a name to use, as long as the postman will deliver it.

JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.

Now the WHY part: Out of 200 postings, say I receive only 5 replies (a very low example). So then I made $5.00 with my name at #6 on the letter. Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #5 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at #4 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and post the MINIMUM 200 with my name at #3 and only receive 5 replies each, I will make an additional $626.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at #2 and they each only receive 5 replies, that just made me $3,125.00!!! Those 3,125 persons will all deliver this message to 200 newsgroups with my name at #1 and if still 5 persons per 200 newsgroups react I will receive $15,625,00! With an original investment of only $6.00! AMAZING!

When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $6.00 to names on the list, putting your name at number 6 again. And start posting again.

The thing to remember is: do you realize that thousands of people all over the world are joining the internet and reading these articles everyday?, JUST LIKE YOU are now!! So, can you afford $6.00 and see if it really works?? I think so...

People have said, "what if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest users and new honest people who are joining the internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with thousands of those joining the actual internet. Remember, play FAIRLY and HONESTLY and this will really work.

** By the way, if you try to deceive people by posting the messages with your name in the list and not sending the money to the rest of the people already on the list, you will NOT get as much. Someone I talked to knew someone who did that and he only made about $150.00, and that's after seven or eight weeks! Then he sent the 6 $1.00 bills, people added him to their lists, and in 4-5 weeks he had over $10k.

This is the fairest and most honest way I have ever seen to share the wealth of the world without costing anything but our time!!! You also may want to buy mailing and e-mail lists for future dollars. Make sure you print this article out RIGHT NOW! Also, try to keep a list of everyone that sends you money and always keep an eye on the newsgroups to make sure everyone is

playing fairly. Remember, HONESTY IS THE BEST POLICY. You don't need to cheat the basic idea to make the money!! GOOD LUCK to all and please play fairly and reap the huge rewards from this, which is tons of extra CASH. Please remember to declare your extra income. Thanks once again...

LEGAL ? ? ? (Comments from Bob Novak who started this new version.) "People have asked me if this is really legal. Well, it is! You are using the Internet to advertise your business. What is that business? You are assembling a mailing list of people who are interested in home based computer and online business and methods of generating income at home. Remember, people send you a small fee to be added to your mailing list. It is legal. what will you do with your list of thousands of names? That's up to you." So, build your mailing list, keep good accounts, declare the income and pay your taxes. By doing this you prove your business intentions.

Keep an eye on the newsgroups and when the cash has stopped coming (that means your name is no longer on the list), you just take the latest posting at the newsgroups, send another $6.00 to the names stated on the list, make your corrections (put your name at #6) and start posting again.
==========

NOTES: * 1. In some countries, the export of the country's exchange is illegal. But you can get the license to do this from the post office, explaining the above statements (that you have an online business, etc. You may have to pay an extra tax, but that's OK, the amount of the incoming money is HUGE! And as I said, a few countries have that restriction. *2. You may want to buy mailing and e-mail lists for future dollars. (Or Database or Spreadsheet software.) *3. If you're really not sure or still think this can't be for real, please print a copy of this article and pass it along to someone who really needs the money, and see what happens. *4. You will start getting responses within 1-2 weeks, it depends.

ALSO REMEMBER SEND YOUR $1 OUT TO EVERYONE ON THE LIST, EVEN IF THEY ARE NOT FROM THE U.S. WHAT ARE YOU WAITING FOR??? GOOD LUCK!!! ----------
---
Give It a try. ***Invest*** It's not a big loss

Message-ID: <20010822223734.23631.00002482@nso-fk.aol.com>
Source record: 60918

Off topic, but FYI for anyone planning to be in Houston this weekend.

Paul, N0JAA

JOHNSON SPACE CENTER HOSTS OPEN HOUSE AUGUST 25

The gates to NASA's Johnson Space Center will open to the public this Saturday, Aug. 25, for the center's sixth annual Open House event. Open House is the one day each year visitors are invited to a behind-the-scenes look in more than 19 buildings that house the people, exhibits and hardware that serve as the nation's human space flight center.

Open House runs from 9 a.m. to 5 p.m. and is free to the public. Visitors may enter the site through four gates: the main gate at Saturn Lane, Space Center Boulevard near Bay Area Boulevard, Space Center Boulevard near NASA Road 1 and NASA Road 1. Parking in JSC lots is available at no charge. For a small fee, convenient METRO shuttles will pick up and return Open House guests to the METRO Bay Area Park and Ride on Bay Area Boulevard in Clear Lake or to Baybrook Mall on I-45.

Open House provides visitors a variety of opportunities to meet astronauts and get their autographs, see the famed Mission Control Center, and touch and feel genuine space hardware. Visitors will be able to talk one-on-one with members of JSC's workforce and see full-size mockups of the International Space Station and the Space Shuttle used to train astronauts for space flight. Free shuttle buses will be available to transport visitors to Ellington Field to view NASA's unique aircraft and to the Sonny Carter Training Facility where astronauts train for spacewalks in the world's largest indoor pool.

Entertainment at JSC includes programs in the Teague Auditorium. On stage in front of the Building 3 cafeteria, the bands "Max Q," comprised of astronauts, and "Southern Cross," comprised of JSC employees and friends, will play golden oldies along with rock and roll. Food, refreshments and souvenirs will be available at the JSC cafeterias. JSC's Education Department will provide a variety of children's activities including launching air-powered rockets and constructing flying rings.

-MORE- -2-

Anticipated Open House guests (pending availability) include the International Space Station Expedition Three crew, Commander Frank Culbertson, Pilot Vladimir Dezhurov and Flight Engineer Mikhail Tyurin.

The Expedition Three crewmembers began their four-month stay aboard the International Space Station on Aug. 13. They will be visiting with Open House guests in the Teague Auditorium from their home in space by remote broadcast.

JSC’s Open House coincides with the annual Ballunar Liftoff Festival, scheduled to take place Friday through Sunday, Aug. 24, 25 and 26, on JSC grounds. The Ballunar Liftoff Festival is a non-profit Houston community event to benefit education. There will be an admission fee for this event.

No alcohol or pets will be allowed at JSC Open House.

For more information about JSC’s Open House, call 281-244-5312 or visit the JSC website at http://openhouse.jsc.nasa.gov/.

-END-

-end-

Liberty is the one thing you cannot have unless you give it to others.

I would also endorse the 245, it's a solid scanner. Does have a few drawbacks, such as not being able to program trunk IDs unless you are receiving a control channel, and doesn't have alpha tags, but very good otherwise. I monitor the Oklahoma Highway Patrol, the nearest repeater is about 40 miles away, but using an antenna from an old cellular bag phone, they come in clearly.

As for mil air band, as far as I know, there are scanners that trunk, or scanners that receive Mil Air, but none that do both. Why, I don't know.

Not necessarily..... if it is a signal that is constant, a person can take a measurement at three separate locations and do the math then. I almost would trust that even more because at least there would be a constant in the detection device. Three diferent people with three different recievers may not have uniform equipment. Obviously if the signal is shorter lived or intermittent you most likely need three people.

Apart from all that has been said make sure that your work is not using a trunked system cause if they are the only scanner worth getting is a trunk scanner such as Uniden 780xlt, if they trunk and your scanner dosn't then forget it.

BEWARE OF THE 245XLT. Here in Australia Motorola have already gone to three base frequencies on some trunked sites in Sydney, the 780 will allow three base frequencies but the 245 will not, the 245 in Aus is vertualy obsolete already.

Your wanting people to get along is admirable and all, but not realistic.
People disagree because that's what people do.

> A good thing might be to develop a "standard" list for this newsgroup that
> isn't technical about different items.

Okay, let's say it is a good thing. It's your idea, so YOU should come up
with this "standard list."

> Let's try to help rather than do battle, I mean it's ONLY scanner
listening and should be enjoyable.

You can start helping by not trying to change human nature. While you're at
it, instruct the steady stream of newcomers on how to use search engines so
they'll won't keep asking the same old tired questions. I know, why don't
YOU write a FAQ for this newsgroup? That will take care of most of the
concerns you raised.

What can I say, it depends on what you mean by good stuff, the 780 xlt is the only scanner that will do everthing you can do at the moment with a scanner, so if you don't know what you want to do with it you may know later and when you do know the 780 will do it, a normal scanner will not do trunking, sure you might say what is trunking and there are plenty of web sites to go and find out but if you don't buy a 780 and you want to trunk you won't be able to trunk, any thing but a trunking scanner is just a waste of money. Why you ask. Because all the major services are using trunking nowdays

Jeff,

Thanks for the FCC site. I was able to find my way to the databases, and they are available for D/L. They are split into several groups, are huge once unzipped, and need Microsoft's Excel to manage. I D/L'ed one file (128MB) but have not yet been able to merge the template file the FCC provides with the corresponding database file. It's a bit cumbersome.

I don't see any simple method of merging the Grove d'base w/the FCC current version other than writing a program to do that, or using Xcel if possible.

I just subscribed to Percon's On-line d'base and they update their system monthly, so this may be moot.

I would like to have a current updated CD available for travel, etc, but this is the best up-to-date solution I have yet seen.

3823. Will data connection to Kenwood TK-940 work with mdtw1234?

Newsgroup: rec.radio.scanner
Date: 2001-08-23 15:57:37 UTC
From: trimble@sep.com
Message-ID: <626af4aa.0108230757.496624f6@posting.google.com>
Source record: 60940

I have a TK-940 that I would like to use with mdtw1234. Can anone advise if a KCT-19 cable equipped TK-940 will work in that capacity? I'd think that the "data" port that the KCT-19 adds would be basically like a data slicer mod for the average scanner, but I'm not able to find much in the way of details on the KCT-19.

On a related note, I'd be interested to hear from anyone who's installed the KCT-19 in a TK-940. The pictures I've seen make it look like the cable exits the rear of the radio through what is now the external speaker connection hole. I think the KCT-19 plugs directly into one or more of the CN1-CN3 headers on the PCB, right?

Thanks for any info!

Todd

Nevada makes the double discone and is based in the UK.

Do a Google search on nevada double discone or nevada ant426
to find a dealer that will work out best for you.

> Also is there such a thing as a wideband AMP ?

There is, but they tend to be either noisy, or expensive, or
prone to front-end overload. I don't use them... I prefer
a sensitive receiver that can handle that sort of thing.
For more narrow-band applications, I do use an amp, but
they will often have band-pass filters on them.

From: Brian <bjergens@MailAndNews.com>
Message-ID: <3B90702A@MailAndNews.com>
Source record: 60943

I recently found out that a kid who lives down the street from us has a scanner. We have had minor problems with him before. I use a regular cheap 900 mhz phone. I'm pretty sure it's not spread spectrum or digital. How easy would it be for him to listen on our conversations? I know he could do it if he modified his scanner in a certain way but I'm pretty sure it's not modified. I dont care how he does it, I'm just wondering if it is possible or easy for him to do with a fairly new scanner.

Thanks

If his scanner covers the 900 MHz frequencies, and your phone is an analog model, yes he could listen to your conversations (without any modifications to his scanner).

As an example - I have a couple older 900 MHz phones that I use for convenience when I'm not near a corded phone and my scanners pick them perfectly. I only use them to answer the phone, and then move to a corded unit to talk.

My friends smile at my little "eccentricities", but that's okay - I value my privacy.

On Usenet, some people act like idiots for they same reason they do while driving or using a ham radio. The idiots believe they are anonymous.

For instance, most people would not cut in front of a line at the grocery store. The same people think nothing of cutting in front of a line of cars, then making a gesture when someone toots at them in protest. People will also attack others online in ways they would never do in person. The same can be said for a ham radio mic.

1=a 2006 w/CE-232

Both in orig. boxes, no manual or antennas

E-Bay pulled auctions, as these are modified to get the 800's in full

RedShift software w/CE-232

Both are in excellent condition

Make offer(s), Waremonger@msn.com

If his scanner covers 900 MHZ, then he doesn't need to modify the scanner to listen to your phone. Your best bet is to either get rid of the cordless phone or switch to a digital or spread spectrum phone. These are virtually impossible to monitor without some really expensive high-tech equipment (read that: out of the hands of ordinary consumers).

Or, if you want to have some fun with him, you could try feeding him all sorts of "disinformation." Write up a script for you and a friend, then call him up some time and read it as if it were real. Say over the phone that you've hidden some large amount of money in a garden shed, abandoned wharehouse, etc). Or better yet, say you've moved your old porn mag collection there. When you see the kid taking off for that general direction, call the cops and report a prowler or burglar at that location. Be sure to give the kid's description.

I sell new Uniden BC245XLT's for $199.00 ea not including tax and
shipping. The scanner comes with a Uniden factory warranty.

Let me know if I can help.

Much easier to simply get a decent phone and forget about the poor
kid. Don't blame the kid for your own inadequacies in being able to
purchase a proper telephone.

I would look at a new one if you want a BC245XLT. They have them
at $189.95 (plus $20.00 S&H) from

http://www.usascan.com/

But, if you look around on Ebay ect., you may do even somewhat
better.

Be advised however, that since the price on this model is now being
discounted, Uniden may be close to releasing a hand held
TrunkTracker III scanner to replace it. (Sort of a portable version of
the BC780XLT.) That would be a much more useful radio given
the newer radio systems out there, and would probably be worth
waiting for.

If you could read between the lines you would see as I said that things
are being worked out without anymore slamming on the newsgroup. It
sounds to me like you just like to hear more arguing. I think you sir
need to get some glasses to read between the lines a little better.
Damed if you do and damed if you don't. I would have been better off
not listing a follow-up because there are always people like you who
like to keep stirring the crap. I told Martyn I would do this and that
is what I am doing. If you call that sticking to a person...well I just
don't know what to say.

Dean,

Your "apology" post now appears without sincerity as you used the groups to BLAST this guy as a means to an end, as do most others who do the exact same thing.

You wanted action from Martyn, and rather then taking it up with him privately in an effort to rectify the problem, you came here blasting him. I guess it worked since Martyn has apparently satisified your concerns, and you wish us all to know that everything is now A O K....

Hhhhmmmm

You should have used code words for "modified to receive cellular".
Like: "Yes, it does" or, "email me for specs".

Your auction wouldn't have been pulled.
There are several people selling them on ebay right now with code
words.

The Ontario Unlisted Frequency Guide is dedicated to scanner radio hobbyists. On Ontario Unlisted Frequency Guide you will find lists of Ontario radio frequencies that are not listed on any other web page, published in any scanner book I.e: (Haruteq or Scantrix) or listed in the government frequency list (Industy Canada's TAFL).

The Ontario Unlisted Frequency Guide mailing list (oufg) is for scanner radio hobbyists so they have a public forum to be able to chit chat with

each other about anything relating to the radio scanner hobby in Ontario

as well you will be able to recieve updates of what changed I made to the OntarioUnlisted Frequency Guide web page.

I think this is usually the case most of the time. You have intermittent
signals, usually mobile, so you would need three people. It is true, though,
that one person could self-triangulate a constant, non-moving signal, provided
that signal is close by and not subject to propagation.

We have problems here in Houston with "squirrels" throwing dead carriers and/or
hurling obscenities. Using triangulation, however, and with several mobile DF
stations, two of them were caught and turned over to the FCC.

Paul, N0JAA

There is a fair going on across the street from my house right now. It is interesting to tune in the family 2-way radio conversations. This is pretty amusing to hear guys trying to pick up girls who have similar radios, parents yelling at their children, and other humerous conversations.

Family Two Way Radio
The FCC has created a new Citizens Band service in the 460 MHz band. It's called the Family Radio Service (FRS), and is designed to be an unlicensed,"Very Short Distance Two-way Voice Radio Service." The FRS channel frequencies are:

462.5625 ,462.5875 , 462.6125 , 462.6375 , 462.6625 , 462.6875 , 462.7125 ,
467.5625 , 467.5875 , 67.6125 , 467.6375 , 467.6625 , 467.6875 , 467.7125

You might also try scanning the business bands for the Fairgrounds officials as well.

Please use these responsibly and legally.

Thanks to ScannerNet http://www.crosswinds.net/~scannernet/freqs.html for these frequencies, and more.

3854. Cable TV as an antenna?

Newsgroup: rec.radio.scanner

I read on a website that you can obtain the proper connectors and connect your CABLE TV to your scanner and tune freqs. Is this so? Cable TV has a voltage. Wouldn't this damage your scanner?

More to the point, there is nothing on a cable that the cable company didn't deliberately put there. So, unless you want to attempt to tune in the various TV, cable, or radio stations, you are out of luck.

Why is it that everyone seems to think you need a trunking scanner to listen to a trunked system? You can listen to it without a trunking scanner it's just that you cant follow it all the way it should be. If your company is on a trunked system I doubt that there is that much traffic and you would be just fine. I followed our 800mhz trunked police and fire for over a year before I got a trunking scanner and I didnt miss much. Now if I was in a bigger town then I agree that it would be next to impossible to follow.

In article <9m34v2$436$1@merki.connect.com.au>, ralf_rf@hotmail.com says...
> Apart from all that has been said make sure that your work is not using a

3868. Home made Low noise broadband antenna amplifier with GaAS FET ?

Newsgroup: rec.radio.scanner
Date: 2001-08-24 13:30:39 UTC
From: marcje01@yahoo.com
Message-ID: <ca10ea14.0108240530.6a7d1cef@posting.google.com>
Source record: 60835
Cross-posted to: rec.radio.amateur.homebrew,alt.radio.scanner,rec.radio.scanner,rec.radio.amateur

Hi all,

I was wondering if anyone ever built him-/herself a low noise
broadband antenna pre-amplifier with GaAs FETs.
I think it must be possible to build one. Main usage for me
would be as antenna amplifier for my discone antenna.
The reason for a GaAs FET is the low noise figure.

As a example SSB in Germany makes one from 50 - 3000 Mhz
with a gain of 13dB and a noise figure of only 1.8 dB!
See e.g.:
http://www.thiecom.de/lna3000.htm (in German)
The price is DM300,- (approx. $ 140,-)

I am wondering what type of GaAs FET they use....

Does anybody have some plans online or know of some application
notes online?

Thanks in advance,
/Marc

What do you like about TrunkStar780 as opposed to WinScan780?

(I know I've posted a simular question in other threads, but no one has offered any real reasons whatsoever why any other software package is better the WinScan780 other then to say it "sucks". I am very happy with it, but I am very curious why people seem to dislike WinScan780. I have looked at the other packages, but saw no advantages to them. This is why I ask.)

What was wrong with what Walt said? The only thing he alluded to, as far as I'm concerned, is that if one is that worried about a neighborhood kid listening to them on his scanner, then maybe they shouldn't be using a cordless phone (at least analog) in the first place.

I can interpret your remark in just about the same way I interpretted Walt's remark. Your's could be thought of as "Give the young scanner nut his liberty to listen to whatever he wants to, then give yourself the liberty of using a real phone and not just a radio that thinks it's a phone."

Jughead

The problem is this IS a bad mosquito year, but for the last 2-3 years the mosquitos have been infected with West nile virus, a potentially fatal infection that has killed several people. The mosquitos bite birds and, horses and people, and can killl them, especially horses. Unfortulately the 'experts' say the disease is here to stay. there is no cure and no vaccine that I am aware of. All problems of loose imigration and imports.

This has nothing to do with scanners, but I was just answering a question.

Here's some freqs for ya':

3883. Quetion Re. Cellular Reception Using A Mechanical UHF-TV Tuner?

Newsgroup: rec.radio.scanner
Date: 2001-08-24 17:58:22 UTC
From: The_AntiArt <The_AntiArt@Hoax.Land>
Message-ID: <57289BBA5DE5BC7C.29A957F0118B6408.4F2D7585C5A454F2@lp.airnews.net>
Source record: 60852

First, sorry that this is not directly scanner related. (Also of course I would ever listen to cellular conversations, but I must ask the following.)

Some years back a guy (think he was a HAM) said he had constructed a cellular reliever using the old mechanical UHF tuner from a TV set. I think he said the tuner ran on 12-14 volts and outputed it's IF frequency at around 50 MHz (which could have been fed to a scanner).

This design was self contained and built in a small box with a stubby antenna. The idea was that if he saw someone talking on a cell phone, he could tune them in and listen through an earphone.

I believe the design was once published on a hobby magazine.

Does anyone have any information, schematics, etc.?

Thanks

Hi,

I'm interested in purchasing a handheld scanner (IC-R2), but there is a cellular phone tower that is less than a mile from my house. What type of interference should I expect from this tower? Is it worth buying the scanner or will I be unable to receive any signals?

I'm very new to scanning, so any suggestions/advice would be greatly appreciated.

Thanks in advance,
at

I have a cellular tower across the street from me and experience no adverse effects from it that I am aware of. Iam able to hear everything from kids walkie-talkies to police from the surrounding counties with no problem, and I only have a 'rubber duckie' antenna. My computer does cause some static, though, so I have to place the scanner in wierd places and positions.

It wasn't built to receive these frequencies. Look on the scanner
somewhere, it should give you the frequency range it receives.

Just another Troll?
There is -true but simple- NO chance.

We should set up an autoresponder sending this fact to everybody subscribing to
a radio-scanner newsgroup first time :-)

For sure there are DC to daylight TRXs with military standard on the market. But
these won't be modified scanners at all :-)
And for sure they won't find place in a pocket. You will need a big 19"rack for
the moduled equipment and at least a few different antennas to cover this range
with some efficiency.

Shouldn't cause you any problems. We're negotiating with Nextel to put a cell site on one of our buildings. One of our concerns was interference with our conventional 800 mhz system and intermod on police scanners.

Their engineer took us to a similar site and we set up a couple of desktop scanners and a couple of portables and saw no interference or intermod. It may have desensed them slightly, but not enough that we couldn't hear what we needed to hear.

Should not be a problem at all. I have one near my house also
and have never had any technical problems. (A few locals bitched
about the esthetics, but that's another matter.)

Actually in many areas today it's hard not to live within a mile or
so of a cell phone tower. They are almost everywhere.

David,

Here is a brief summary of what you'll find in the range your scanner can receive (and beyond). There are plenty of more detailed listings on the Web, but this will get you started, and you can also see what your scanner is missing.

There is some good background info--and maybe even some useful frequency lists if you're located in the mid-Atlantic or Northeast region--at this site: http://www.fordyce.org/scanning/

- Doug

A summary of the FCC Table of Frequency Allocations, based on the Oct '93 Code of Federal Regulations - 47 CFR 2.106

30 - 50 MHz: FM @ 20 kHz steps
30.000-30.560 - U.S. Government
30.560-31.980 - Business/Industry/Forestry
31.990-32.000 - Public Safety
32.000-33.000 - U.S. Government
33.000-33.100 - Public Safety
33.120-33.400 - Business/Petroleum
33.420-34.000 - Fire
34.000-35.000 - U.S. Government
35.020-36.000 - Business/Paging
36.000-37.000 - U.S. Government
37.020-37.420 - Police/Local Government
37.460-37.860 - Power, Water, Pipeline
37.900-38.000 - Highway Maintenance/Special Emergency
38.000-39.000 - U.S. Government
39.020-40.000 - Police/Local Government
40.000-42.000 - U.S. Government
42.020-42.940 - State Police
42.960-43.680 - Business/Paging
43.700-44.600 - Transportation (bus/truck)
44.620-45.060 - State Police/Forestry Conservation
45.080-45.860 - Police/Local Government/Highway Maintenance
45.900-46.040 - Police/Emergency
46.060-46.500 - Fire
46.520-46.580 - Local Government
46.610-46.970 - Cordless Phones - base (20/40 kHz steps)
47.020-47.400 - Highway Maintenance
47.440-47.680 - Industry/Emergency
47.700-49.580 - Industry

49.670-49.990 - Cordless Phones - handset (irregular steps)

50 - 150 MHz

Take it in stride Jim. I sold my VERY old PRO-2006 on eBay a few months ago
for more than I paid for it new.

FYI, I am using the HP 54143 PHEMT. It is VERY friendly with respect
to noise matching and input reflection. I have a bag of 'em
since I had to get them in quantity -- if you look, they should be
available
for between $2 and $4 each. There are more inexpensive PHEMTs,
that might be better for other LF (<3GHz applications), but the HP
seemed
to have the best combo of input noise characteristics, input matching,
gain, and ease of bias (it requires positive gate bias, so it is
slightly
easier to deal with source inductance issues.) Actually, it seems to
work
best at <1GHz wideband apps if you use about .5nh to 1.0nh, in the
source lead, therefore providing a very nice input match to reasonable
input impedances. (The HP PHEMT has very large noise circles making
input noise match easy.)

If all you need is the 2.0dB NF range, you might want to look at the
Stanford Microdevices part number sga4586, but it is just SiGe bipolar.

Both the HP PHEMT and the Stanford Microdevices parts have high
output power capabilities, and arent' very susceptable to overload.

This and the Pro37 were excellent scanners, but they are hard wired
for NO adjustments in hold time. Scan speed is faster on the 37 with
"hyper speed".

What format is the database in? You may want to try Access. Or, save
the file as a .txt and then open it that way in Excel. How big is
your file?

GO and buy a 900 mhz phone with a digital transmission, They are so cheap now it's very affordable.....People with savvy can modify scanners to receive digital transmissions, but that greatly reduces the chances of anyone (within the range of your phone's base unit) listening in.

If someone has the windows program that decodes theMotorola's MDC-4800 Police Data Terminal transmissions, and maybe some basic instructions on what I need to connect my scanner to my computer, I would be truly appreciative if they would send it to me, I would like to learn more about the system and do some testing. I have a program in C for Linux that will do this but I need something that will work with windows.

Thanks.

I guess the best way to answer that is to take a look at their web site at

http://www.fcc.gov/fcc-bin/wtbdatadump.pl

There are files listed that you need to load into X first and then merge
the database. This is where I get lost.

Thanks.

In fact, the delay time can be changed, but not by itself.

If you increase the scan speed by changing the time base crystal (as
I've done to mine) the delay time is shortened. Conversely, slowing
the scan speed would lengthen the delay time. If that trade-off is
acceptable, it can be done. If not, you're stuck.

For information only:

Don't forget the "Digital Telephony Bill" enacted 11/94 in the US
(Public Law 103-414). It contains an amendment which prohibits
listening to cordless telephones.

Not very easily, they can't! They may be able to receive digital
transmissions, but demodulating them is a different matter.

On Thu, 23 Aug 2001 15:06:07 -0400, Brian <bjergens@MailAndNews.com>
tapped out:

>I recently found out that a kid who lives down the street from us has a
>scanner. [snip]

My basic attitude is that anything I say on the cordless phone can be
overheard -- so if I'm making any kind of sensitive call (e.g., one
involving financial information, credit card transactions, etc.), I
use the land line (usually, that means my fax machine). If I'm just
yakking away with a friend, I'll use the cordless phone -- who cares
if someone hears about how I did in last Sunday's bowling tournament?

I live in an apartment complex -- and, truth be told, I've been known
to listen to the occasional cordless call on my scanner. I'm in the
low-rent district of town, so most of the calls tend to center around
the subject of money -- namely, that no one around here HAS any! I
tend to either get bored or just feel that I really shouldn't be
listening to someone else's phone call, and go do something else. But
yeah, it's just a fact of life that anything you broadcast can be
received -- that should be no surprise. If you want privacy, either
use a wired phone or get a digital cordless unit, as suggested by
others.

Of course, the "disinformation" idea does sound like fun -- if you
suspect the kid's listening in, it might be good for a laugh....

Urb

Never argue with a 10-16 101.

Yes because one day they said "the power supply to the repeater quit, without the repeater we don't have enough range". That day they quit early.

Another day they were having problems with the repeater antenna. I've many times heard them using the term "repeater".

Unless what they are refering to is something different from what we know a repeater to be. But I know that their "bug" has a several mile range because where the "working girl/cops" are located is at times about 3 miles from where they are monitoring the bugs from.

It's not just you.
I got my 780 last month and downloaded the frequencies for my area code, about 300!! which is a lot for me. After a week of scanning it was obvious that most of the frequencies were just filller, like the FRS and some nationwide frequencies. Only about 20 frequencies were actually being hit out of 300!! I used the Frequency Logger program to find out which ones were actually used and moved them all to the first bank and locked out the rest that never had any hits which makes scanning a lot faster. I forget the website for the Freq logger, it is on ebay though.

I went on a cruise earlier this week out of L.A. to Ensenada.
I took my Icom R2. (my wife and kids came along also...)
I was on a Carnival ship. I did listen to the RCCL ship that
was pulling into port. Mostly the crew and officers setting lines
on the dock.
My cabin was down in the lower levels of the ship and I couldn't
pick up much other than FRS that was close.
I scanned a lot, but never could find freqs that the crew would use.
I was able to listen to lots of interesting talk while in port on the
marine freqs. The Port Authority was busy controling ships that
were coming in and out of the harbor.
I suggest you do a Google search, you might find something there.
You can also try these. Have fun.
Al

Marine Freqs and misc cruise ship.

actually the cost was $599 at one time, I saw it in an old Radio shack
catalog
If you bought one for less than $200 you were very lucky! that's what they
sell for on ebay, in average, cheesey condition, reeking of smoke, with
cheese whiz all over the buttons, and the display semi-dim. "Excellent
Shape!"

Nope, actually you get MORE than the trunked scanner! The little known secret that no one tells you is, that TRUNKED police systems have SECURED channels where they make private calls to each other and phone calls too! On a conventional scanner, you get to listen to ALL the calls! I like to listen to the cops when they are cussing out the sarge, and planning the love escapade with the dispatcher!

Our local bible college has their radio tower right next (within 30ft!) to a big Cell array. Apparently it is no problem for them as they have been delivering fine Christian programming to the community in spite of the cell tower being put there..

Have for sale an AOR AR2002 scanner. Scanner is in what I would consider mint condition.This scanner is known by most hobbyists of these groups. Features the LED green/red s-meter feature.Complete with box and packing material, AC Wall wart, DC Direst wire line, telescopic antenna and down loaded copy of manual.Works perfect.Asking $165.00 shipped via UPS in the 48 states only.Can send pictures by direct e-mail request.Thank you....Dennis

It's already a transceiver! The local oscillator can be picked up on another receiver/scanner. But I'm sure this is not what you wanted.
In short, can't be done! You'd have to build a separate transmitter. Truly not worth it! Besides, scanners unless your spending alot of money i.e. more than $1000, your getting the commercial crap that has poor bandwidth, tons of birdies and poor rejection. BEARCRAP, RADIOCRAP and all the companies that sell scanners in the $100-$400 range are poor.
The money in a good quality scanner does not go into bells and whistles but into proper filtering.

Message-ID: <Xns91094D147A0notthistimecom@206.141.192.32>
Source record: 60779

I was getting a little bored with the hobby but recently added a
TenTec RX-320 and Uniden BC-780XLT to the shack.

I don't know if it's the novel - for me - aspect of marrying radio
and computer.

Or if it's just that they both work so daggone well.

All I know is I'm having a blast with both these little radios.
They're fun and work great.

Radio is fun again!!!

Just thought I'd share some newfound enthusiasm for the hobby :)

Ted

3963. F/S AOR 8000 Handheld Scanner

Newsgroup: rec.radio.scanner
Date: 2001-08-26 11:45:23 UTC
From: DigitalEbola <digitalebola@iPrimus.com.au>
Message-ID: <3b88e168@news.iprimus.com.au>
Source record: 60780

For Sale, AR 8000 handheld scanner

http://www.strongsignals.net/htm/rev8000.htm

$470 AUS - Not Neg

Comes with car charger, wall charger, leather case, origional antenna, box, and manual.

email me for further information (Geniune Inquiries only please)

anthony@clickfromreality.com

Introduced in late 1994, the AR8000 took the scanning world by store. Never before had such performance and features been packed into a single radio that you could hold in the palm of your hand. Dubbed 'The New Concept', AOR raised the playing field to a much higher level and eclipsed every other radio receiver on the market with the introduction of the AR8000.
The AR8000 came with 1000 channels in 20 banks. It boasted 20 search banks with 1000 search-skip frequencies. It had auto-store, two VFOs, an S-meter and could be controlled by computer. As if that weren't enough, it offered users the ability to tweak lots of receive options and allowed for alpha-numeric tags to be added to all memory channels and search banks!

Due to the 1997 Gingrich fiasco, the FCC recently revoked the certification for the AR8000 since it was too easy for people to reprogram the radio's bandplan thereby opening up the taboo cellular telephone bands. Never mind that this capability had been there for nearly two and a half years. Now with the AR8000 gone, many people are selling theirs for a premium. The rest of us wait to see what AOR replaces this great radio with.

What follows are my personal impressions regarding the features and performance of this radio. This, in no way, should be viewed as an endorsement to purchase this radio nor is it intended to discourage anyone from buying it. I have no personal or business relations with AOR Company Limited. These are simply thoughts offered to my fellow hobbyists who may be interested in purchasing this particular radio.

I simply ask that this information be kept intact. A lot of hard work and effort has gone into the testing and writing of this review. I would appreciate it if every effort is made to keep this document whole with me as the original author.

And if you want to share your thoughts about this review with me or have further questions, feel free to send e-mail.

Thank you and enjoy!

I don't think their transmitter will have much of a inter-mod or overload problem from a cell tower nearby, however a lowly handheld receiver/scanner might. Not counting the fact that God is obviously on the college communications advisory board.....

Here are some frequencies for teh Houston, TX area. Following is a list of frequencies in same area that I would like to obtain.

Houston Police Department (non-trunked channels; these repeat the trunked radio system)
Ch. 01 -- 460.3250 North
Ch. 02 -- 460.1250 Northeast
Ch. 03 -- 460.0250 Southeast
Ch. 04 -- 460.0500 Southwest
Ch. 05 -- 460.4250 Detectives
Ch. 06 -- 460.1000 Central
Ch. 07 -- 460.3500 Operations
Ch. 08 -- 460.2250 Car-to-car
Ch. 09 -- 460.4000 C I D
Ch. 10 -- 460.4500 Detectives
Ch. 11 -- 460.4750 Northwest
Ch. 12 -- 460.1500 West
Ch. 13 -- 460.0750 South Central
Ch. 14 -- 460.3750 Traffic/Animal Control
Ch. 15 -- 460.5500 South Central

Other Houston PD Frequencies

154.7550 -- Airport Police
154.8600 -- Detectives Alternate Ch. 2
155.5500 -- Detectives Alternate Ch. 1
453.6500 -- Administration
453.7000 -- Data
453.9000 -- Communications Van
460.5250 -- Ambulance Monitor

Houston Fire Department
Ch. 1 -- 453.5000 Dispatch
Ch. 2 -- 453.4250 Alternate Dispatch/Administration
Ch. 3 -- 453.6750 Prevention/Tactical
Ch. 4 -- 453.9500 Investigatiors/Tactical
Ch. 5 -- 460.5750 Ambulance Alternate
Ch. 6 -- 462.9500 Ambulance Dispatch
Ch. 7 -- 462.9750 Ambulance Alternate Dispatch
Ch. 8 -- 460.6250 Ambulance Supervisors/Tactical

Other Houston FD Frequencies

154.3100 -- Pagers
460.5250 -- Ambulance Monitor

Okay, here is what I am looking for: the frequencies for Harris County and Fort Bend County Constables in Texas.

Thanks.

Me!

From: "diz@spacelab.net" <diz>
Message-ID: <v15iotkt1pkbu80boc16qe3qf1rhe9qfld@4ax.com>
Source record: 60785

I live in an apartment in Manhattan and have the BC245XLT scanner and was wondering if there is a small antenna rig I can hook up out side the apartment window, possibly hooked onto the fire escape that will not be visually obtrusive for obvious reasons and will give me better reception than I'm getting now with the retractable I got from radio shack. Would lightening be an issue if I found something and hooked it up? The other question is where can I find a battery for the scanner as it will no longer hold a charge. Thanks.

You can get them here in the UK for around £100.00p
I bought an as new 2006 for £95.00p and also an as new 2042 for £105.00p
and both these were the unblocked Euro versions.
Anybody who gives over $170.00 for any used 2006 whether it is as new or not
needs their head examining.

Get yourself another bnc connector and some coax and wire the thing up so you can plug it into the buildings TV antenna from the socket in your place, if the antenna is on the roof you will be surprised what it will receive. TV antennas are desighned to cover a wide range of frequencies with both UHF and VHF TV being spread across a wide range, if you can't do that just put an old antenna outside on the fire stairs and see how it goes, it won't look like a scanner antenna its cheap and it works, vertical mounting of the TV antenna is the best way if your going to use it for scanning. The antenna on the roof you will have to use the way it is mounted now (horrizontal) but if you put one outside yourself then vertical mounting is the way to go. Of course there may be some loss by using the buiding antenna due to the coax installed being 75ohm when you should be using 50 ohm but if you wire up your own antenna then you can use 50ohm all the way. Don't laugh I've saved a fortune doing this, works as good as a beam antenna and a beam is the only real way to go when scanning as all these omnidirectional scanning antennas are shit anyway.

There is lots to listen to if you live in the right location. I live in Daytona Beach, the local police come in great on my PRO 94's and PRO 2054. But most of my listening is Mil Air and NASA communications, both I can pickup great here in Daytona.

I too have a PRO2006 granted it can't trunk but stacked beside all my other scanners (the list includes: PRO26, PRO94, PRO2054, PRO2035, and I've owned a few BC's from time to time) the PRO2006 has MUCH MUCH better sensitivity than the others.

I wouldn't give $0.02 for another BearCat, the worse for images I've owned, especially in the MilAir bands. The BC9000 may have Cell freqs blocked but it didn't much matter as so many Cell images appeard in the Mil Air band it made trying to monitor the MilAir band WORTHLESS with that scanner.

I too, am in the repair business and do not take lightly the ethics of repair. They had the equipment for almost a year and never even opened it up. They never responded to my requests for an update or sent me any kind of communications regarding the status of its repair. If you or I ever ran our business that way we would not be able to enjoy our good reputations. Don

Who makes them? What department(s) uses them?

Highest freqs I have ever heard voice comms on was, I believe, 1011.4625MHz,
the Mass. State Police, over a year ago. No longer have that scanner in my
car though so I don't know if that freq is still used.

Here are the rules you must accept in any service industry:

Never make excuses. The truth is the only answer that is ever acceptable.

The customer may not always be right, but you must treat him as if he is.

Respect and courtesy for your customers, workers, and suppliers are
absolutely essential.

Never over-promise. If it's going to take a year, say so.

Never under-estimate. If it's going to take a grand to fix it, say so.

If you're so busy that you can't attend to the details of customer service,
then you can't afford not to hire somebody who will take on that task.

If you point your finger at a customer and say 'He's the problem!' then
note that while one finger's pointing at him, the rest are pointing back
at you.

An argument occurs at the intersection of two jerks. You can avoid
the argument by behaving in a non-jerk-like manner.

Deliver the unit as promised. If you can't get to it in the quoted time,
contact the customer and explain. If he asks for it back, return it
without hesitation, with an apology, and postage paid. It's worth it
for good customer relations.

Your standard of service must be the same for all customers.
Do EVERY job to the highest standards and EVERY customer
will be pleased and will deal with you again.

Last but not least, NEVER jump customer's equipment in line.
They come in first, they get serviced first. No customer's equipment
should ever be set aside to do an expedited repair on another unit
for a more important customer. No customer is any more or less
important than any other because they're all paying you.

CJ

Yes, try the marine frequencies first when they're in port, and work your way from there. It is possible, though, that intraship comms are probably on regular itinerant frequencies in the GMRS service. Try some of the GMRS frequencies between 155 and 160 MHz, and 450 to 452 MHz. You might also try between 470 and 490 MHz.

In any event, the length of the antenna on their HTs will give you a good indication of what band they are on.

Paul.

Hello,

I've been able to find a number of web sites with frequency lists for the San Antonio area. But I've been unable to find any specific to the area around Castroville, Hondo, Quihi, and Rio Medina.

I purchased an handheld scanner for my dad who lives in that area, but I'm a long ways from there, so I'm looking for help in pre-programming the unit for him. Maybe there are some ham radio operators or scanner buffs in the area that could give me a hand.

If you can, please post a reply and let me know. I sure would appreciate any help I can get on this little project...

Thanks,

Ken

>> Cheek is dead

This is a case of the message going through the E-layer skip and ending up somewhere on the other side of Jupiter. From there, it was swept away by a solar magnetic storm, where it tunneled through a wormhole and transited through a rift in the space-time continuum. This caused a shift in the local graviton field, thereby resulting in a shift in time. At this point, the message went back through the rift and the wormhole, reaching relativistic speeds, eventually arriving in this newsgroup at this time.

Nope, the railroads use conventional VHF business band FM radios. I've got an old railroad Motorola MT-500 that I put on the local EMA frequency.

As for the marine bands, the VHF marine channels are VHF-FM. The older HF frequencies are SSB.

This is probably either radar guns, or point-to-point microwave links.

> Police, all other depts of city using 150's, 460's etc. Locals tell me
> police moved out of range of regular scanners. I can pickup most

Most likely they've gone to cellular/digital/trunked, or a county owned
system of that type.

I see Santa Rosa is currently licensed in the Public Safety/Special
Emergency group for 858.4375, though.

Frequencies that high are not used for your normal
voice comms, but they are used for microwave links between
tower sites, and may be used for incar video, in the few
applications where they are tranmitting that video
to dispatch.

The word "transceiver" means to transmit. You would have to build a transmitter. With that thought in mind, you are not permitted to transmit on frequencies that you are not licensed on. IE: Police, fire, ems, business, federal - state - or local government, amateur, etc..... So what's the point. The Amateur Radio community and public safety has had transceivers that scan for many years, I have a hand held that scans frequencies on two bands.

I prefer the pro 94 to the 92 as the 94, IMHO, is more clear. I have owned both but took the 94 back after a day with it. Ebay is an awesome place to pick up scanners. Also, many areas have people that design websites for their area just for scanning enthusiasts. That is a great way to get info for your area. I also live right next door to Oceana's Master Jet Base for the Navy and had to get a pro-2042 to picck up the airband. Once you get into the hobby you'll find yourself wanting more and more. I actually put a discone in my attic for both my scanners and I want more! Have fun!

With many cities now banning the use of hand held cell phones in cars, there are several companies offering various hands free devices.

I saw an ad on television for a unit that will work through your car stereo system. You attach a microphone to the earpiece of the phone then tune your car stereo to 96.1 fm and you can hear the caller through the car's stereo system. Would this be legal to monitor?

Listening in on baby monitors is not illegal because the government says that because you knowingly place a transmission device within your home used specifically for monitoring, you are not protected from people listening in. Would this be the same with this device that transmits to a car radio? I have been driving around listening to 96.1 and have not picked up anything yet. Those idiots who demand privacy on cell phone calls should be up in arms that someone is creating a device to re-transmit supposedly protected transmissions over fm radio. Will the government ban these devices that they have forced the industry to create through the banning of hand held cell phones? or will they simply ban car stereos?

These are things I think about when I am home alone and the television is broke.

The people using Cell phones want privacy but yet they will talk on their phone out in public for all to hear... Its especially annoying in a restaurant when trying to eat and you can hear the guy in the booth next to you talking on his cell phone louder than you can hear your dinner partner. Cell phones annoy me as much as a screaming child in the restraurnt....memeber parents spanking has not been outlawed!

4010. Re: FCC Database and Excel...

Newsgroup: rec.radio.scanner
Date: 2001-08-27 17:45:58 UTC
From: Jughead <jugheadx@xisp.com>
Message-ID: <8b0lotg3vpcd62kfft7adubr34ag2mrag6@4ax.com>
Source record: 60728

Hey Andy, thanks a bunch for pointing that URL out to us (at least me). Like several others in here, I've been known on more than a few occasions to dig through the FCC's database straight through its search engine (the General Menu site). That engine is so limiting in what kind of criteria you can search for, however, that I would certainly rather import all these DAT files into XLS sheets and weed out all of the data I obviously would have no interest in.

Anyway, from what I'm understanding from your questions here, I'm under the impression you're trying to transfer the data found in the DAT files to XLS format while also not having to go through the hassle of manually separating each of the sections for each line. If this is the case, I can definitely help you with your problem. Here's what you need to know and do:

Each Excel worksheet has a maximum capacity of 65,536 lines of text. There are 57 lines of data in each page from the DAT files found in those FCC ZIP files. Dividing 65,536 by 57 gives you a bit more than 1,149 pages of data you can transfer. In the "AC.dat" file alone (found in the l_aircr.zip file - Aircraft 47 CFR section), there are 1,173 pages of data, so obviously doing a CTRL+A (Select All) command will cause a copy/paste or "Insert File" command (from Excel) to cut the document off.

To save you the hastle of trying to locate where exactly the transfer will leave off, I posted this simple math so you can know exactly which page you can go to the end of from Page 1, Line 1 and not worry about overshooting the capacity of the Excel sheet. So go down to the end of page 1,149 and left click+drag the mouse all the way back up to the very beginning of the document first. Use the Copy/Paste commands (CTRL+C and CTRL+V or use them from the toolbars and/or menus) to copy all that data from the DAT file to the XLS file.

Next, click the "A" at the top of column A so you can highlight the entire column (the data hasn't been separated into their own columns yet). Once that is done, open the "DATA" menu in Excel and select the "TEXT TO COLUMNS..." command.

A dialog box will appear with 2 radio buttons on the upper part of the window. Select "DELIMITED" and click NEXT.

On the next screen, you'll see 3 sections of the window. The upper left section shows "delimiters" criteria, the upper right shows info you won't need to worry about, and the bottom section shows a preview of what your criteria should do. Check the "OTHER" box in the delimiters section and type | into the box next to it (the | key on my

keyboard is SHIFT+\ if you need help finding it). You want this, of course, because that's what the FCC has used in the DAT files to separate each section. Once you've done that, click NEXT again.

The next - and final screen - gives you the ability to format each column. I would suggest you set all columns to TEXT one at a time so that there's no risk of Excel making its own assumptions and altering any of the data that has been copied. Once you format all columns as TEXT, click FINISH and you'll now see each section in its own column. Warning: even with an 850MHz PC with 256MB of RAM (my setup), this will cause a minute or so of pause in Excel. Don't be alarmed though. It just natural takes it that long to perform the command you've just instructed it to do.

On a side note, if you find any other large files and want to figure out ways to more easily search for the specific parts of the data that you want to get to while in Excel, I know a trick or two there as well.

Example: I saw in one of those DAT files some information that included city and state. Without researching, I would assume those are transmitter cities. Considering the fact, I live in Southern California and would have no interest in anything outside my general region (CA, AZ, NV, etc). If you would like to have a feature to easily show only those areas which interest you, just highlight Row 1. Then go to the DATA menu, select FILTER, then AUTO FILTER. The top cell in each column should now have a pull-down menu you can use to select specific items. If there's some criteria that you know you will never have any interest in, you can always select that particular criteria so that only it appears and then drag the mouse down the row numbers to delete all of them from your list.

Sorry about the long post here, but this should give you a good and complete explanation to help you do what you apparently desire to do much more easily. Please let me know if this is actually what you were looking for.

Try a search for the counties those two locales are in. Most likely their
police and fire services are covered by county services.

Hondo and Castroville are both in Medina County. I could not locate either
Quihi or Rio Medina on the map. If they are in the same county, then try a
county search.

Paul.

4016. RS PRO-2052 Weather Broadcast Interference

Newsgroup: rec.radio.scanner
Date: 2001-08-27 19:42:35 UTC
From: Mike <newsgroups@onesuv.com>
Message-ID: <3B8AA2AB.476ED9AB@onesuv.com>
Source record: 60734
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I have a Radio Shack PRO-2052 scanner that seems to have weather broadcasts bleeding into most transmissions. For example, when trying to listen to 166.675 (U.S.F.S Air to Air fire operations), sometimes I hear the airplanes talking to each other but mostly the scanner stops with a computerized weather forecast. This is not the Alert stuff but just normal weather information. No matter how much I turn the squelch up, I cannot get rid of the weather. It happens on many, many frequencies.

This unit is connected to an outside antenna and we are about two miles from a mountain with repeaters on it. Also, I have an older Radio Shack PRO-2006 unit and when connected to the outside antenna, there is no weather - just airplanes talking to each other.

My question is, is are there some settings I am not aware of that will stop this or is there a problem with this radio?

Thanks.
Mike

Start at www.firehouse.com and drill down to their "Live Dispatch"
area (http://www.firehouse.com/links/Live_Dispatch/). There are
several police and fire departments with streaming and/or recorded
radio traffic available. They also have links to live CAD data
online.

This is a late post, but...

When listening to the Fire/Police frequencies in the 450-460 MHz range, I
occasionally come across cellular image frequencies. It's not a IF multiple
that I can determine, but instead it seems to be a harmonic of the original
frequency.

4022. old R/S discone mod for HF/loVHF

Newsgroup: rec.radio.scanner
Date: 2001-08-27 23:19:07 UTC
From: Don Parker <tazman@cox-internet.com>
Message-ID: <tollauie1757bd@corp.supernews.com>
Source record: 60740
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Recently upgraded my old R/S discone to a AOR DA3000 discone. The difference in price & hardware quality is about 2X, not to mention a big difference in design configuration. Had an old base load CB whip stuck on the R/S (the newer ones have a loaded top piece, ala Diamond, but I'll bet my mod beats it!!), which did help on the lower freqs. After the upgrade (got a AR5000 for base, with DA3000 discone on roof where R/S was - moved R/S to a lower mast on rear deck, where an old CB had been, and Yupi 7100 which used to be primary scanner is now #2 on the R/S discone), I found that I was hearing lots more on the AR5000 than the Yupi, and the sensitivities is about a dead heat for the radios (in fact the Yupi probably has a cat whisker more, truth be known!). No surprise on UHF since the AOR discone was higher, had a bit better grade coax (RG-6 vs 9258), and was only a 50' run vs. 70-80', but it did surprise me on the lower VHF stuff! Soooo - the R/S has a 5/16" stud sticking up to screw something onto - I got a 57" K-40 CB whip replacement, longest I could find & readily available for ~$7.50, took a 5/16" joint nut (about 1" long), stuck it on the R/S stud, leaving a nice 5/16" receptacle for the whip. Then take a 1/2" long, 5/16" bolt, drill a #30 hole down through the center for the whip, drill a #35 horizontally through the bolt head to intersect the vertical hole, tap for a 6-32 set screw, and you're set. Put the whip in the bolt, screw in the set screw, screw the thing into the 5/16" coupler, and get set for a *phenomenal* increase in your lower band hearing! It matches the AOR on the roof now!!!!!! Just a little FYI thing.....
Cheers n beers y'all!!
Don

Hey Don,

Did you ever loose any of your "cone" radials from your RS discone? I
lost 2 (one next to the other) in a 50+ mph wind storm last December!
I'm just south of Palomar Mountain (where the 200" telescope is) and I
have not noticed an appreciable loss in signal; LAPD/FD came in loud and
clear from 160+ miles away. (I believe they are digital now) CHP from
Santa Barbara comes in with the skip at times.

Where did you get your DA/3000?

Alain

Alain,
Got the DA3000 from Universal, they had the best price. First order with them, and they seem to be very on top of things and efficient!!

I did lose one lower radial on the R/S. I thought at first the thing had just vibrated lose, but turned out the screw had broken off.... Luckily I was able to salvage it, since the opposite end is hollow I tapped it for a 8-32 thread (if you haven't noticed, I do have a fairly well stocked tool box, the product of working for generous companies over the last 35 yr. [:->]=), inserted about a 3/4" screw with head decapitated & locking nut salvaged from what was left in the hub, and was off and running again..... The DA3000 has elements that are nearly 1/4" dia (which improves bandwidth)., and the hub is a polished gem! Don't believe most of the pictures you see of the thing, they seem to come from some generic picture box of what a discone should look like - go to www.aoruk.com for some of the best data, and plain general info going. Skip www.aorusa.com , it's a dud (why???)!!
Needless to say, I'm a AOL fan, big time, now!!
Cheers n beers.
Don

Message-ID: <rich-8C13F1.20212227082001@news.theramp.net>
Source record: 60744

While some of the information contained in NCIC files may be publicly
available, the user agreements and NCIC rules prohibit member agenciess
from disseminating the data found there. The agencies are free to
disseminate the information they themselves provide to NCIC in
accordance to state, federal and local Privacy and Public
Information/Freedom of Information laws and procedures.

For example, Anytown PD may tell the world that it arrested Joe Criminal
for Public Stupidity, but it may not tell the world the results of a
NCIC search for his criminal record exept as specifically allowed by
NCIC rules and current laws.

There are several reasons for this, including to prevent employees of
user agencies from selling the data to private parties, prevent
unauthorized disclosure, and other privacy concerns. Interested (and
authorized) persons can retrieve data from other sources if needed.

Yes, I do to when driving by a certain building in town that is home to a cellular repeater. I guess it's due to the wide front end of the scanner, not necessarily due to an IF image. However, two scanners I've owned, the BC200XLT and BC700A, pick up images at twice the IF. Too bad they have to block frequencies out of scanners when they can pick up the signals anyway.

I want to solder a bridge from point A to point B on a handheld device. It's a simple job that will increase its receiving capacities, and doing it myself will spare me all of the hassles associated with approaching FCC boot lickers who wouldn't do it anyway.

Problem is, it's a very tight area and I'm a novice. I realize inaccuracy is the kiss of death, so what I need are tips from you seasoned veterans on which type of solder and solder gear I should use, and the correct method of ensuring that I get it where I want it!

Thanks in advance. Is there any doubt we're living in a police state?

I've had an RS discone up on my roof for a good 10 years,
none of the elements have come off or worked loose. It gets
plenty of cold, hot, snow, rain and wind here in Utah. It's been
a good dependable all-purpose antenna.

4039. Lehi, UT trunked repeaters

Newsgroup: rec.radio.scanner
Date: 2001-08-28 16:03:29 UTC
From: bhall7@email.com
Message-ID: <dc0c38eb.0108280803.3735aabb@posting.google.com>
Source record: 60656

Hello,

This message is primarily for any avid Utah County, Salt Lake County scanner enthusiasts. Others might find irrelevant.

I frequently check Brett Miller's Utah Frequency page (http://n7olq.home.att.net/Radio/frequencies.htm) for freqs, talkgroup IDs, etc. It is a killer page not only for Utah scanning but for general radio information as well.

On the "Utah County Sheriff - 1J" page (http://n7olq.home.att.net/Radio/UCfreq.htm), at the bottom there is information for "Lehi Repeaters" under the "Utah County Trunked System Details." I programmed the Lehi repeater freqs into my BC245XLT and tried to track the system near Lehi, but I hear nothing. When I scan the frequencies traditionally (with trunking mode off), I hear snippets of conversations. I can't hear any data channel and I wonder if these frequencies are now being used for something else besides a trunked system. Any information you could provide me would be very helpful. Thanks!

The frequencies for the Lehi repeaters are:

855.5125 866.8375 867.0875 867.2875 867.8875 868.2875
866.225 866.625 855.7375 856.2125 857.2125 867.575
867.725 868.625

Happy scanning!

Hello all,

This morning on the way to work, I heard the dispatcher here in Salt Lake County (UT) announce that the particular call where there was a child injured at school was "upgraded from a 'delta' to 'alpha'..." Does anyone have information on dispatch codes and what they mean?

The closest thing I could find was on Brett's page (http://n7olq.home.att.net/Radio/10code.txt):

10-85 VICTIMS CONDITION
A. FAIR
B. POOR
C. CRITICAL
D. POSSIBLE FATALITY
E. OBVIOUS FATALITY

But I'm not sure if these qualify as "dispatch codes".

Thanks.

That's what I thought. Since the BC9000XLT uses up-conversion
the cell images fall around 360 MHz range.

I do not live near a military air base. Otherwise it is a good radio
but I am looking to replace it with a BC780XLT now.

Hi, Alan:

Yep, LAPD is digital, except for the old Tac 1 (154.830) and Channel
22, "Access" channel (484.4375), which is used for some air to ground
comms.

LAFD is still analog and they have no plans, as far as I have heard,
to change at this point.

Whattup y'all?

If you are interested in listening to live radio scanners on the internet (most are PD, FD, EMS, etc. with a few ATC), I've put together a playlist with over 40 presets. Some are more exciting than others.

http://www.bhall.com/scanners.m3u

I recommend Winamp to listen (www.winamp.com). There are many more live scanner broadcasts on the net in the RealAudio format. However, I prefer the .m3u and .pls formats over RealAudio. If you would like to hear more of these scanners in different formats, check out the following links:

http://www.policescanner.com
http://home.earthlink.net/~mitbr/Mi01000.htm

If you find any more scanners online in the .mp3, .m3u or .pls streaming format, post them. Happy listening!

I used to hear them all the time when I rode the train. They'd place
orders over the phone, giving out credit card numbers, SSNs, client info,
all loud enough for everyone on the train to hear.

4047. Uniden Sportcat 200 programming from PC?

Newsgroup: rec.radio.scanner
Date: 2001-08-28 20:52:07 UTC
From: djb@laptop.donniebarnes.com
Message-ID: <slrn9oo12n.2eq.djb@laptop.donniebarnes.com>
Source record: 60664

Anyone know anything about programming the Uniden SC200 (Sportcat) from a PC? I bought one (mostly for the Bristol race) with the mistaken impression that it had PC software that would let you program frequencies via a serial cable.

Instead, it lets you plug directly into a modem to dial up to their server and download frequencies via a $.99 per minute 900 number. It only takes 2 minutes at most, so it isn't costly, but it also doesn't give you a very broad coverage area. The "SmartScanner" software you can download is nothing more than a program to "pass through" a serial port on your computer to an internal modem for the same purpose (for folks who only have an internal PC modem).

The radio also has "clone" mode which will let you clone the programming from one radio to another, which I now presume is what the radio shops that sell to NASCAR fans use to pre-program the radios they sell at the track. I'm betting, however, that someone clever could reverse engineer the protocol that they talk to each other and thus use a PC to do the talking rather than a second radio.

All I want is an interface that lets me type in the frequency and associated text string and then download that to a memory spot. Entering a couple hundred of those using the keypad and knob method is just too damned tedious. This shouldn't be *that* dang hard.

Anyone got any insight into this that might help? I tried demo versions of the software that talks to the higher end trunking scanners and such hoping for the radios to be using a unified protocol, but to no avail (which wasn't at all surprising). *sigh*

Interesting question. A possible nit-picking answer would be:
No. If there's no direct connect to FM Radio but rather a "re-broadcast"
than it ought to be covered by the same bogus law that bans cell-phone
monitoring. However, if the person leaves their window down so you can
hear it as you pull up along side him at a light than that's legal, just like
overhearing a conversation in a park, for instance.

Trying to be my own Devil's Advocate, it might be legal anyway since the
signal is being re-braodcast on a "public" commercial band (BCB FM) I've
seen the commercials too and you're right it does raise some interesting
questions.

>Listening in on baby monitors is not illegal because the government says
>that because you knowingly place a transmission device within your home used
>specifically for monitoring, you are not protected from people listening in.
>Would this be the same with this device that transmits to a car radio? I
>have been driving around listening to 96.1 and have not picked up anything
>yet. Those idiots who demand privacy on cell phone calls should be up in
>arms that someone is creating a device to re-transmit supposedly protected
>transmissions over fm radio. Will the government ban these devices that
>they have forced the industry to create through the banning of hand held
>cell phones? or will they simply ban car stereos?
>

I can't quote chapter and verse but I recall a Wash. Post survey of a few
years back that showed the two most common personal uses of cell-phones
were:
A. Call and tell your spouse, "I'm leaving work now."
B. To order home-delivery pizzas that would arrive minutes after you came home.

I really do think that no matter how accepted cell-phones maybe be today they
will one day be the Buck Rodgers Ray Gun of our era: The quaint, laffable
device we willingly glued our ears to in a vain attempt to be "modern." A lot of
people are gonna look real silly one day. IMHO and FWIW.

>These are things I think about when I am home alone and the television is
>broke.

Then leave it broke - you're doing better this way.

Does anybody know if there has been a change in the Lake County Ohio trunking service? My scanner will not trunk-track these frequencies for the past week or so. I know that the scanner is still trunk-tracking, as there is no problem with the Geauga County (a neighboring community) service. My PRO-94 seems to be operating properly. It goes into the trunk mode, and it "sees" the data channel, but there is NO activity when it is in the trunk mode. My old Bearcat scanner (non-trunking) indicates that there is activity on all the listed frequencies, but not a peep out of the pro-94. this leads me to believe that possibly there has been a change in the trunking system that Lake County Ohio uses. Any help from N.E. Ohioans would be appreciated.

Brian,

Here are the dispatch codes for VECC in Salt Lake County.

I sent you a private email about UCAN.

Jon

VECC & Salt Lake Police/Fire & Rescue Dispatch Codes

Alpha Fair Condition 16 Eye Problem
Bravo Poor Condition 17 Fall
Charlie Critical 18 Headache
Delta Possible Fatal 19 Heart Problems
Echo Obvious Fatal 20 Head/Cold Exposure
21 Hemorrhage
1 Abdominal Pain 22 Industrial Accident
2 Allergies 23 Overdose
3 Animal Bite 24 Pregnancy/Birth/Miscarriage
4 Assault/Rape 25 Psychiatric/Behavioral
5 Back Pain 26 Sick Person
6 Breathing Problems 27 Stabbing/Shooting
7 Burn 28 Stroke

8 Carbon Monoxide Poisoning 29 Traffic Accident - Injury
9 Cardiac Arrest 30 Traumatic Injury
10 Chest Pains 31 Unconscious Person
11 Choking 32 Unknown / Man Down
12 Convulsions/Seizures
13 Diabetic Problem "29C = traffic accident with victim
14 Drowning/Diving Accident in critical condition.
15 Electrocution

VECC/SLC 9 & 10 Codes

9-1 Officer Needs Help! 10-33 Help Quick!
9-2 Send Back-Up 10-33A Psychiatric Problem
9-7 Armed with a gun 10-33B Violent Person
9-8 Mental Subject 10-33C Armed & Threatening
9-11 Death 10-33D Firefighter Injured
9-17 Robbery 10-34 Time Check
9-21 Burglary 10-39 Lights & Siren
10-4 Affirmative 10-40 Lights, No Siren
10-6 Busy 10-41 On Duty
10-7 Armed with a gun 10-42 Off Duty
10-9 Repeat 10-45 Request Back-Up
10-10 Home 10-46 Confirm Status
10-12 Stand By 10-50 Traffic Accident
10-13 Shakedown 10-55 D.U.I.
10-14 Stakeout 10-60 Out with violator
10-15 Prisoner in custody 10-80 Chase
10-19 Return to station 10-99F Warrant - Felony
10-20 Location 10-99M Warrant - Misdemeanor
10-21 Telephone Code-1 Emergencies only
10-22 Disregard Code-2 No lights, Siren
10-27 Drivers Licence Check Code-3 Lights & Siren
10-28 Registration Check Code-4 Status: OK
10-29 Warrant Check

I do not know. why not just move to a country that has it legal to listen to cell's the only law here is that no transmission heard can be rebroadcasted or disclose from leaving your mouth. but heck. if we wanted to listen to those boring things. we could. jsut illegal here to rebroadcast.

Do you have a list of all 43 stations listed. I wouldn't mind knowing where I am listening too. I haven't been able to find such a list of real media scanners that are active.

It use to be that way here in the US as well until too many "Do-Gooders" didn't have enough to do and decided that we need more "Feel Good" laws on the book. The "Do-Gooders" here in the use however don't care about the enforcement of current laws, they want to "feel good" by creating more.

You can purchase a program from an outfit called Pozzilla Software. It's available from www.national-electronics.com among other places. If you purchase an annual subscription to Frequency Fan Club you can download the racing frequencies in the file format that this software uses.

Very true. I have a BC700A, and I sometimes receive the cellular images,
whether I want to receive them or not. Fortunately they do not occur often.

It MUST be a government conspiracy! They pass laws to prohibit the monitoring
of cellular transmissions, then we pick them up on the image frequencies and we
afe forced to listen, anyway!

:)

How's that for a conspiracy theory? <grin>

Paul.

Hey,

The list of live scanners in the playlist are ones that I fished out of tons of different links on web pages. When you enqueue the live feed from your bookmarks into Winamp, it only spits out the ip address. However, if you hit play and skip through each one, allowing just enough time for the title of the stream to load, you can easily acquire the name of each transmission.

Good luck.

Does this work using the real audio player. That is what I use most. It would be nice to know where some of these are coming from, they seem very interesting.

The TenTec 320 is great. Anything that can tune in one hertz increments gets my attention. The next logical step for them would be to extend the tuning range up to ..say..3 ghz..and increase sensitivity below about 1 mhz.

This may be slightly off topic, but has anyone discovered a complete channel layout for Provo PD and FD? I have seen a few talkgroups popup on the system which I did not see on the site. I'd also be interested in any updated UCAN talkgroups lists. I have one that was sent to me in April, but just as with many new systems, a lot of new talkgroups have shown up.

Thanks

Thanks, folks, for the help!

I was able to find almost 100 frequencies with the information you provided, so the scanner memory is almost full. I'm going to give it a final charge and it'll be on its way.

I really appreciate your taking the time to help out. Thanks again,

Ken

Hello!

I am considering buying an AR-1000 in good cosmetic shape and with
usual accessories. I wonder if US$55 is a good price for it and if
it performs reasonably well... comments welcomed!

Thanks!

PA-SitRep
Pennsylvania [Emergency] Situation Report E-Mail List

The PA-SitRep mailing list is a free communications tool that will enable you to monitor and report on major emergency situations throughout the State of Pennsylvania including weather emergencies, natural disasters, environmental disasters and civil disturbances.

The list is extremely low volume because messages to the list are limited only to those containing verified emergency situation reports of Major Import within the State of Pennsylvania.

The list is run from a private server at my expense, so there are no advertisements necessary or permitted. Rumors, hearsay, unconfirmed and or inaccurate reports and chat are strictly prohibited.

Subscribers do not have to be members of any specific emergency services organizations to join the PA-SitRep mailing list. ANYONE willing and able to comply with the posting guidelines is welcome.

The list protocol for posting messages is designed to cater to those who use digital cell phones or alphanumeric pagers for text messaging. The first paragraph of the messages posted to the list are brief summaries limited to 100 characters, followed by a more detailed situation report.

For more information, or if you'd like to subscribe, please visit the following web address:

http://www.pa-sitrep.com/pasitrep.htm

Thanks. And we'll look forward to your participation.

Shit! I swear I did what I thought was an exhaustive search and now I've found two packages available to do this. The one you are referencing is called "Winscan Sport" for $26.90 at National Electronics. The other was sent to me in email by someone from this group. It's downloadable and called EZ-Scan Sport available at http://members.home.net/itssoftware/ez-scan.htm for $20. I've downloaded the trial version of this and it appears just what I want, so I've purchased the full license.

This really bugs me that I couldn't find these on my own. *sigh* Win some and lose some, and thanks for the responses...

If you have the chance of an Aor 1000 for US$ 55.00. Snap it up.
well worth that amount. I had one years ago, (cost a lot more than 55.oo I
can tell you)
It only has AM/FM/WFM but if I recall it covers from 8.000Mhz to
1300.000Mhz-No gaps. It is quite a good scanner, well worth $55 anyway.
If you don't buy it, tell the seller I will buy it.
regards
SD

Another 500 channels (Jeez, who woulda thought I'd fill up 500 so quick???)

And 40 banks (of 25 each) Or better yet, the ability to program in the size of each bank. Say I program in just my local police & fire, and that takes about 20 slots - make that bank 1, bank 2 starts at 21, and goes to - wherever.

Ok, I am done daydreaming now :)

i'm 16 yaers old. i just got my scanner about 2 weeks ago but already have heard lots of police, fire and ems stuff. im looking for more. i have spent about the last week looking for different frequencies in my area(wichita). Yet i cant seem to find any. my main search area is school buses and the local mall security. i would also like to find other security freqs. for hotels and such. again i have looked diligently and have come up with almost nothing except for cordless phones(which is very cool in my opnion) any way my e-mail is flipteam15@hotmail.com so either send all your good info there or post it, PLEASE. also lemme know if you live in wichita and have a scanner, we can share local info and maybe even become good friends. Who knows.

thanks for any info

Would have been funnier if you would have called a flower shop the next day and had flowers delievered to the guy at home with another womans name on the card! Then on the card have the flower shop write "Thanks for a wonderful time last night, I hope your wife doesn't find out as I want this to last forever, Love Debbie".

I got one and like it a lot.

It does charge up at a fairly fast rate like 800ma or so so you can't use it with small batteries like the 9v variety.

Also a lot of my batteries tend to get warm when charged at the higher rate and the little thermal sensor you put on the battery will switch the charger off in mid stream if the battery gets very warm.

Thanks to all who responded to my original post. I have my scanner
now, and it seems to me that the tower is not giving any interference.
Of course, being new to scanning, it is difficult for me to know how
interference would affect what I'm hearing (or not hearing). Police,
fire and other miscellaneous frequencies come through very clear. I
will keep my eyes on this newsgroup to learn more.
Thanks!

> S.LR

The 2 GHz band is used for point to point microwave connections, such as hilltop repeaters or remote bases to the control point, (usually dispatch location). You won't find any mobile or portable voice activity on these frequencies. That 1011MHz frequency mentioned above is probably an image frequency behing heard that was actually on the 800MHz band.

Well, the problem seems to have resolved itself. Today, everything is working fine. About the only explanation I can think of is that I had the priority channel alert turned on and when the data channel was moved to that slot, the scanner locked on to the data channel. I'm not totally convinced that this is the problem. But anyway, all is fine once again..

This is a great radio. but...the keypad can suffer from "not working". I have somewhat solved the problem with graphite on the pad, but given the age of the unit, you need to get some assurance that the keypad works.

It's OK for general scanning but for $55 get it!

Teeavee;
Tray the site below for air demonstration team frequencies.
http://www.fordyce.org/scanning/scanning_info/airshofq.html

Grove Enterprise has a great CD filled with military frequencies and
military flight information publications.
they are at http://www.grove-ent.com
Subscribing to their magazine will also give a lot of information and
it you don't want a subscription try buying the MAY issue, MONITORING
TIMES at a large chain bookstore The May issue has the latest
frequencies and the schedule for the teams. Another site
http://www.airnav.com has information on airports and the frequencies
used.
This can help find the AIR BOSS frequency. The AIR BOSS controls
everything at the show also look for the AIR BOSS on military VHF or UHF
FM frequencies and the AIR BOSS may have Family Service Radios to
communicate with staff around the air show. If UHF AM military air band
is not covered in radios available there is still plenty of action
on VHF AM civilian aircraft band and the Blue Angels military FM radios
and the Thunderbirds UHF FM radios, used by the their ground maintenance
folks.Bring HEAD PHONES AND EXTRA BATTERIES FOR THE CAMERA AND
RADIOS,and a liter of bottled water.

One last suggestion if you DO NOT want to be stuck in a traffic jam at
the end of the show..LEAVE about 20 minutes into the Blue Angels
routine.
Watch the rest of the show as you RUN back to the vehicle and listen to
them as you leisurely drive off the field in little or no traffic!

Evan,

Go to Radio Shack and pick up a copy of Police Call Plus. It will probably have most of the local frequencies listed, just requires a little digging. At the same time, ask the clerk if they have a free frequency hand-out sheet, many stores do.

What would have been even funnier is you being arrested for credit card
theft. Since there are very, very few truly anonymous telephone calls
any more, you would probably have been picked up 15 minutes after the
flowers arrived. <G>

$55? Hell yeah! It's a real pain in the butt to program, but it's got every feature that you would want. Without the manual, it might be impossible to really use it well. It's not all that intuitive to use (now that I think of it, what scanner really is). If you look around, you might be to find an old copy of Howard Borenstein's (not sure of name spelling) guide to the AR-1K.

I don't recall if it needed a better antenna. I don't think I had much difficulty picking up stuff, but I'm in a good area. You definitely need different antenna for SW and other stuff aside from the usual scanning bands.

Replacement keypads are still available (same one used on the Trident TR-2400 but fitted the other way around) and whilst not as easy as some to replace replacing it the best option.

But if you're using a cell phone in a very public place, how do you know
which stranger wrote down your credit card number?

Bottom line is, a private conversation on a cell phone is not private, with
or without a scanner.

Just keep it and learn how to use it
Get the programming cable and use the computer to program the freqs then
all you have to do is learn how to operate the scan and search functions
untill you work out the other controls

they are a great radio and you will be sorry later on that you got rid
of it

...posted in a.b.r-s...

You can use this mod to directly control the synth chips in the Radio Shack PRO-2035 scanner and tune it outside the standard tuning ranges. It may also work on the 2042.

I can't guarantee this, but on my 2035 I'm able to pick up CHU at 7.335 MHz, and anything above 9 MHZ comes in fine!

MD5SUM: cd106ed9b593b27e432e88b916ab4563 *p2035mod.zip

Let me know if there's a better place to post (750K .zip file)

I'm interested in attempting a software decode for Project 25 audio, but so far I've had no luck finding the specs. I'm looking for a copy of the P25 CD-ROM, or the 102.BAAA (CAI) and 102.BABA (vocoder) specs...or source code, DLLs, etc. Any help appreciated...

4109. Regarding discone antenna

Newsgroup: rec.radio.scanner
Date: 2001-08-31 00:48:17 UTC

Currently I'm using the Diamond D-130J discone antenna. The antenna is regarded to be one of the best discone around. The problem with the antenna is that it terminates with PL 259 connector. PL 259 is only good for up to around 300 Mhz. Logically I think discone like Icom AH-7000 is better because it terminates with the N connector. N connector is good for up to 11 Gigahetz. I think D-130J won't give optimum reception on UHF spectrum.

Coast Station.

FYI - the AOR DA3000, good to 2GHz, has a TNC connector at the antenna (ok - aerial across the pond), but comes with RG-58U coax with a TNC at one end, and a BNC at the other, so what the hell difference does the TNC, SO239, or Type N make at the antenna, unless you're going to run RG-8 (at the absolute minimum) down to the radio, to another type N??? When you get to 99% of the scanners on the market, you're going to adapt down to a BNC, and most likely use some cheap shit coax getting there.... Look at the total picture, then ask just how important that one connection is! Either do the whole thing to the letter, or just accept you're going to have a technically mediocore system (which most of us do)..... I stuck a TNC/SO236 adapter on my brand spanking new DA3000, because I knew unless I did the rest, it wasn't going to accomplish much just to change the cable connector on some mediocore Beldon 9258 coax that already had a PL-259. But it was better than the RG-58U that came with the antenna, so-o-o-o.....
Cheers n beers y'all

Remember most of the performers will be civilian. When I was there they used the tower frequency.

Al
"Jim Mac Donald" <jmacdon@mitre.org> wrote in message news:3B8DCA6A.55DF05BC@mitre.org...

Teeavee;
Tray the site below for air demonstration team frequencies.
http://www.fordyce.org/scanning/scanning_info/airshofq.html

Grove Enterprise has a great CD filled with military frequencies and
military flight information publications.
they are at http://www.grove-ent.com
Subscribing to their magazine will also give a lot of information and
it you don't want a subscription try buying the MAY issue, MONITORING
TIMES at a large chain bookstore The May issue has the latest
frequencies and the schedule for the teams. Another site
http://www.airnav.com has information on airports and the frequencies
used.
This can help find the AIR BOSS frequency. The AIR BOSS controls
everything at the show also look for the AIR BOSS on military VHF or UHF
FM frequencies and the AIR BOSS may have Family Service Radios to
communicate with staff around the air show. If UHF AM military air band
is not covered in radios available there is still plenty of action
on VHF AM civilian aircraft band and the Blue Angels military FM radios
and the Thunderbirds UHF FM radios, used by the their ground maintenance
folks.Bring HEAD PHONES AND EXTRA BATTERIES FOR THE CAMERA AND
RADIOS,and a liter of bottled water.

One last suggestion if you DO NOT want to be stuck in a traffic jam at
the end of the show..LEAVE about 20 minutes into the Blue Angels
routine.
Watch the rest of the show as you RUN back to the vehicle and listen to
them as you leisurely drive off the field in little or no traffic!

I got the month wrong for the great military info on air shows.
MONITORING TIMES's MARCH 2001 edition by Larry Van Horn MILCOM
"Monitoring Military Flight Demonstration Groups" is the one,not MAY.
He also covers the F16, F15, F14 and A-10 demonstration units, also
foreign teams and parachute teams. Larry covers bands to search,
I found several new frequencies this way at air shows.
MONITORING TIMES and Mr. Van Horn also did a AIR SHOW update in
the JULY 2001 editon.

4116. Wisconsin DNR squelch codes

Newsgroup: rec.radio.scanner
Date: 2001-08-31 05:47:00 UTC
From: Pat Deethardt <deethardt@tomah.com>
Message-ID: <deethardt-740D40.00470031082001@corp.supernews.com>
Source record: 60633

Anybody here have any idea what type of squelch coding the DNR uses on their repeater network? Either they're using non-standard CTCSS tones, DCS, or carrier squelch (which I doubt). I've tried scanning through all the 'standard' CTCSS tones and it appears they aren't using them. Any ideas?

Thanks,

Pat

4117. New AOR AR-1000 YahooGroup

Newsgroup: rec.radio.scanner
Date: 2001-08-31 06:49:29 UTC
From: FJose <eb5agv@ctv.es>
Message-ID: <3B8F3379.8BFC658E@ctv.es>
Source record: 60634

Hello!

From your comments to my request about AOR AR-1000 info (thanks for them!), it seems that this classic has still some interest. So I have decided to create a YahooGroup for it (including AOR AR1000, AR1000X, AR1000XC, AR1000XLT, AR2000, Fairmate HP100, HP200, HP200E, HP200 Mk II, HP2000, Camnis HSC-010, Trident TR1000XLT, TR1200XLT). I am toying with a project to interface it to a PC by means of an small microcontroller board, modifying the 5kHz step (if possible ;-)) and some other things... so I thought about a dedicated Group to keep focus on this model.

Main page for the Group is at:

http://groups.yahoo.com/group/ar1000

If you wish to directly subscribe, just send a message to:

mailto:ar1000-subscribe@yahoogroups.com

Best regards,

JOSE

Well, the same problem is back again today that occured in the
original post. I have eleminated the possibility that I may have had
the priority turned on. So there must be something going on with the
800 mhz county system that I cannot explain.

Absolutely false! How much signal difference (in dB) do you think your scanner will see at with an "N" connector vs. a PL-259 at say 1 GHz? I'd estimate something on the order of 0.1 dB. Trust me, it would be hard to measure the difference, and impossible to hear it.

The "N" connector is better from a moisture infiltration standpoint. But the PL-259 is easier to install properly, and can be made very water-resistant by molding "duct seal" around it. And you can buy silver-plated/teflon PL-259's for about $1 by mail order.

I know you old hands get tired of this, but....

I bought a Pro-91 off ebay for monitoring race freqs (now I have a Pro-40 for sale REALLY cheap) and now I'm hooked on listening to the county trunked broadcasts (5-7 miles from the repeater, downhill), using the stock duck. I also enjoy listening to air, and I naively hooked coax to my old tv antenna and mounted it vertically in the basement. It does get quite a bit of traffic. Now, I want more. Being a miserly bastard (and wishing to experiment), I would really like to build my own outdoor antenna, so I did a google search for scanner antennas, and am more confused than ever. Hence:

Am I stupid to attempt to build my own? If I buy one, will it improve my 800 trunked stuff? Which one should I buy?

I think I understand that an antenna is somewhat customized for the freq range. Could I/should I mount two antennas and have a a/b switch to go from air to 800?

Finally, is there a way to combine these ideas with an antenna that will xmit and receive cb? Why doesn't my scanner have CB capability?

4123. AOR Out of Country Purchase ??

Yawn. You're wasting people's time asking questions that you can easily find the answers to. This is by far one of the most asked and discussed questions in the history of scanning. It is second only to, "What are cordless fone freqz?" S-E-A-R-C-H.

As for the Antenna

Buy this, and don't even think about it:

Diamond D-130J

Good, no GREAT for general freq. scanning

Radio Shack also has a discone for $60.00, so if you can't get the best
(Diamond D-130J) go for the Radio Shack.....

For my $.02 worth of advice? I'd say go ahead and experiment. There are so many sites for antennas on the web, so many books at the library. It's fun, it's educational and most of all it's something you can point to with pride!

Source record: 60547

THE most important thing for a VHF/UHF antenna is altitude. That's why your TV antenna in the basement worked poorly. I'd much rather have a simple ground plane or discone antenna at 60 feet than a super high gain beam at 20 feet.

A discone is hard to beat for all around scanner listening. If you have a very specific need (like wanting to hear 400 MHz or 800 MHz signals from a distant city), you can use a UHF-TV Corner Reflector antenna. It will have to be turned on it's boom for vertical polarization and aimed in the right direction. I've done this with excellent results with a Radio Shack UHF antenna.

Yes, two antennas can be switched using an A-B switch.

Finally, use good quality coax and install the connectors properly. RG-6 is a good choice, and you can buy it with the "F" connectors installed. Contrary to urban myth, using adapters to mate "F" connectors to BNC or PL-259 plugs will NOT cause more than a a fraction of a dB of loss. Make sure to weatherproof all outdoor connections with "duct seal" (get it at Home Depot's electrical department). I like to use "F" connectors with RG-6 because that cable uses aluminum braid that you can't solder.

If you enjoy expeimenting, you can easily build simple ground plane antennas for various frequencies. Check out some of the ARRL books at your library.

Some scanners do cover CB. You'll hear some CB stuff with a VHF antenna, but it ain't gonna be easy to cover 27 MHz to 900 MHz with one antenna.

That wasn't naive. Just take it out of the basement and mount it on top of your house. A good rotator would be a help, since your vertically-mounted TV antenna will only receive signals well in one direction.

>
> Am I stupid to attempt to build my own?

Not at all. I enjoy building antennas & experimenting with them. Check out http://photos.yahoo.com/n2uhc for some plans of antennas I made. Click on "projects."

> I think I understand that an antenna is somewhat customized for the

Yes, A/B antenna switches are readily available in the ham and TV market.

> Finally, is there a way to combine these ideas with an antenna that
> will xmit and receive cb?

If you're meaning, can you hook a scanner to the same antenna that your CB is connected to, no I wouldn't do it without some VERY good filtering to block out the 27 MHZ CB signals. Otherwise, when you key your CB you will fry your scanner. And if you connect something to your CB transmission line, it may alter the SWR. Best is to use a separate antenna for the scanner.

>Why doesn't my scanner have CB capability?

Some scanners do. They cover 25-1300 MHZ.

I'm talking about the antenna only, not the coax that comes
with it. My views is base on logic and theory, whether that thing
would work in the real world remains to be seen. Currently I'm using
LMR-400 coax with the D-130J and I would use the LMR-400 too if I'm
using the AH-7000. And the BNC connector that comes with the scanner
is good up to 4 Gigahetz, in theory.

>EZ-Scan Sport available at http://members.home.net/itssoftware/ez-scan.htm
>for $20. I've downloaded the trial version of this and it appears just
>what I want, so I've purchased the full license.

So, now that I've bought it I wish I would have bought the other one. :-)
EZ-Scan Sport is fairly buggy. I downloaded my scanner's current list with
a few minor bugs. I then used the software to add a bunch more frequencies
to the list. I tried to write it back to the scanner and fought and fought
to make it happen. I finally did make it happen by exporting my data to
a file, importing it back, and then writing it. Oddly, that worked.

The guy who wrote it has been trying to work with me some to see if he
can reproduce the problem, but so far he can't. *shrug* If anyone has
better experience with Winscan Sport, I'd love to hear it. I may have to
buy the other one now. :-(

>
>Coast Station.
Hi,

I wouldn't get too upset with a PL 259 connector at the feedpoint of
the discone. The major knock on that connector deals with transfer of
power in a transmitting installation. It will heat up quite noticeably
when RF above 300 mhz is passed through it. In a receive installation
I suspect you would not see a measurable difference between the PL 259
and most other common connectors. When you think about it, a TV
antenna feedline is often termintated with an F connector at both
ends, and it is used for reception up into the 700 mhz regions at UHF.
The cheap and flimsy F connector and its crimped on coax connector is
extremely lossy if used in a transmit installation, but it is
satisfactory for reception.

4145. Weird noise audible on many trunked channels

Newsgroup: rec.radio.scanner
Date: 2001-09-01 01:22:51 UTC
From: Jughead <jugheadx@xisp.com>
Message-ID: <jhd0ptgnjh59evr2uqe84iidhdbgr91i9l@4ax.com>
Source record: 60562

I typically like to monitor any and all trunked networks found in my county (Riverside, CA) with my BC220XLT. I've noticed that a lot of the active frequencies I monitor tend to have some weird garbage sound included. This noise usually comes up right after many of the transmissions I hear on the affected frequencies.

I've listened to many trunked channels with this radio before - including when I lived in the neighboring San Bernardino County - and can't recall having ever experienced this before moving out this way. This junk noise becomes active on frequencies that I want to monitor more than others, but I can't get rid of it. It will sometimes cut off after several seconds, but then has a habit of coming back frequently before the 2-second delay hits. In other words, there are a lot of times when I end up wasting precious seconds of time hearing this junk when I could be finding another active conversation on another channel.

I made a recording of this noise and have posted it to the Web. If any of you would like to hear this irritating noise, you can download the WAV file (just over 400KB in file size). from the following URL:

http://surfree.homestead.com/jughead/files/trunknoise.wav

I'd really appreciate getting some input on this because it's gotten to the point that I'm VERY tempted to head over to Uniden's website and order myself a new BC245XLT so I can have something more suitable for monitoring trunked networks - particularly in hopes that the BC245XLT might actually keep this "problem" quiet.

Source record: 60563

Let's not confuse power handling capability with loss. Loss in dB will be the same whether transmitting or receiving. This is true for coax as well as connectors.

I have run 50 watts of 449 MHz FM through PL-259 connectors and they do not get the least bit warm. That tells me no significant power is being dissipated in the connector. (If even one watt were being dissipated, it would get warm fast.)

The PL-259 is the most unjustly maligned connector around! A properly installed PL-259 can handle a kilowatt at UHF with no problem. Now, the "F" connector is another story. I wouldn't try to pump a KW through one of those!

Very good, The BC780XLT is a great table top model that will do several trunk systems and conventional at the same time. The BC245XLT will trunk two systems or do conventional and one trunk system. The first 245's out had some long delays built in. The delay was removed in the later units.

I have a Unident 245xlt scanner that is doing something very odd. When I first turn it on, after being off for a few hours, it will scan for a few seconds then go into search mode. This has just recently started and I would like to know how to stop it. Thanks for any info.

> what I listen to which includes Ham transmissions.

Here are four ideas for you.

1. Dial in 146.520, the National Calling frequency for 2 meters.

2. Go to your local radio shop and get the ARRL repeater
handbook, which contains a nationwide listing of 2 meter, 70cm and 6
meter repeaters. Your scanner will cover the first two, and, of
course, you would program only the output frequencies. Alternatively,
you might run a websearch and find the local amateur radio club, check
its website to see if it lists local repeaters.

3. Run a websearch on the Internet Radio Linking Project to see
if there is a local node in your area. The IRLP uses amateur
repeaters linked worldwide via the internet, so it is possible to talk
to Australia with a 500mW HT. Note the unnecessary HF practices on a
VHF/UHF link.

4. Run a websearch on AMSAT, I think the website is amsat.org.
This website deals with satellites that carry amateur radio packages.
The up/down links are on VHF or UHF. Although the birds are within
range for only a few minutes at a time, and the frequencies change
during a pass because of the doppler effect, it makes for interesting
monitoring.

73 and
Good hunting.

I purchased several packages for my 780, but the best, IMHO, is TrunkStar780. It's not a hog on your PC's resources and it works very nicely. Check it out at www.scanstar.com I believe you can download a working demo version.

I was looking at that BC780XLT as well, and it certainly does appear to be a really nice one. But because I like being able to have something to listen to while I'm in my car (and I do drive plenty), I had to go for a handheld model.

So the BC245XLT will get rid of this weird noise I'm hearing on my BC220XLT, right?

Also, I have a question about what you said just below about the BC245XLT trunking 2 systems or doing conventional and 1 trunk. Do you mean that when the scanner has trunked frequencies programmed into its memory, it can only do 2 different types of systems at once or 1 conventional and 1 trunked (regardless of type) or what?

Scan 144.000 - 148.000 MHz. That's the Amateur Radio 2 meter band and
where most all of the local action is. It shouldn't take you long to
find your area's local 2 meter repeaters.

I have a page that explains repeater offsets and PL tones here:
http://www.pa-sitrep.com/ploffset.htm

And if you're interested in getting into Ham Radio, check out this
address:
http://www.pa-sitrep.com/amat.htm

That address has basic info on getting started in Ham Radio and links
to every site you need to visit to prepare for your Technician Class
test.

Go for it!

Message-ID: <_38k7.1923$lJ2.116569@newsfeed.slurp.net>
Source record: 60583

It seems that this was covered earlier, but here it goes...
I am running an Icom IC-R7100 with a discone antenna at 30 ft.
Since a recent lightning ground-strike, I have renewed interest in the
area of grounding.

Where is the most effective point for grounding?
The antenna doesn't have a convenient spot for attachment,
but the reciever does.
Will it affect the reception?

Tom

if they do charge anything at all. it would be either PST or GST. if you lived in canada you would pay both. but if you lived elsewhere. you may not pay any or just one or the other. I forget right now if they do charge for outa town tax. In Ontario one is 8% and the other is 7% if I remember right. the rest of Canada is 7% GST and 7% PST on 1 dollar. so 1.14 canadian on 1 dollar.

Ground the mast that the antenna is mounted to. Run a heavy COPPER wire (8 gauge) in as straight a run as possible (no sharp bends) to ground. Drive an 8 foot ground rod into the ground so that the top is a few inches below grade. Use the proper connector to attach the wire to the ground rod. All of this is available at an electrical supply house or Home Depot. (Don't use the aluminum ground wire that Radio Shack sells.) Grounding will not affect reception. If you really want to protect your radio, disconnect the antenna and pull the power plug when not in use.

I took an old metal chassis and installed various connectors on it. The connectors are all grounded to the chassis, and the chassis is connected to a cold water pipe as well as my outdoor ground rod. During the summer months, I disconnect my antennas from my radios and connect them to my grounded chassis box when not in use.

Any one know of a radio club I can join in or near St Helens (Merseyside
UK) ???

THANKS
RICK

Hello to all,
Just recently got my 1st trunking scanner, RS Pro-92, I love it...
But the dumb question is, how do you manage your frequency's.
Yes, I know how to program it, and use the banks, just wanted some input on the
best way to group frequency's for my local aria, I would like to monitor about 4 local county's
as most of there systems over-lap, normal, as well as 800MHz, and one system is EFJ 800MHz.

So far I got about 400 frequency's covering fire, EMS, police, and some local stuff.

What are your views on this subject ?

Rich

the majority of figures which relate to a connectors ability to operate at 'x' freq refer to transmitting of a signal using it , not reception.
the majority of pl259's are 50/75ohm imp so will happily work. however when we start to talk in terms of GHz, then it will not be as good as say N type. but as long a good coax is used (which is VERY important) the diff between connectors for RX is very small. the majority of problems at higher freqs come from cripped connectors (of alsorts), if u can solder them. tarnish produces amazing attenuation above about 300MHz.

Why would they have gone digital if I can still hear everything just fine even with my NON-TRUNK TRACKING BC220XLT?

Orange County and Los Angeles County police and sheriff departments may have gone digital already, but nobody of interest in my county has gone digital - at least yet.

If the Riverside County sheriffs or even any of the local police departments had gone digital by now, I wouldn't be picking them up right now.

Source record: 60457

Rich,

I don't have that high a level of activity in my area, and the only trunking system I listen to is the Okla. Highway Patrol, and their trunking system isn't state-wide yet, so here's what I do, for what it's worth. Bank 1 is the main dispatch freqs for all the LE agencies in the area, with the priority set to the local PD. Bank 2 has the local city freqs. Bank 3 has the fire freqs for the area. Bank 4 has the EMA freqs. Banks 5-10 are dedicated to each agency in my area. For instance, Bank 5 is the sheriff/county, Bank 6 is the local state university, Banks 7 and 8 are the OHP - low band and trunked. Bank 9 is the area security agencies and Bank 10 is aviation. Banks 2-6 has frequencies in addition to the main channels which are in Bank 1. I normally monitor Bank 1, and switch the other banks on when additional depth is needed. For instance, the LE agencies in Oklahoma are conducting a holiday weekend "push" to reduce auto fatalities, so I have Banks 1, 2, 5, 7, & 8 on right now. During severe wx I'll listen to Banks 1, 4, 5, and maybe 7 & 8. On football game days I listen to Banks 1,2, 6, & 7. Each bank has it's own assignable priority channel, and I vary these to reflect the activity occurring. By always monitoring Bank 1, the "catchall" bank, I'm generally assured of not missing anything that might come up. Clear as mud??

>
>Am I stupid to attempt to build my own?

Not at all, if you're the least bit handy. You can come up with
stuff better than commercial.

If I buy one, will it improve
>my 800 trunked stuff? Which one should I buy?

I can't speak to trunked as I don't listen (none in my area), but if
you build (or buy) an antenna designed for it, you should see some
improvement over a broadband antenna.

>I think I understand that an antenna is somewhat customized for the
>freq range.

That's correct. Do some searches for antennas in general, and you'll
find the formulas that relate length to frequency. Basically, as the
frequency goes up, the antenna gets shorter; antennas for around 800mhz are
fairly small, light and easy to handle.

Could I/should I mount two antennas and have a a/b switch
>to go from air to 800?

Sure - there'll be some signal loss at the switch, though. You can
also just switch connectors as needed.

>Finally, is there a way to combine these ideas with an antenna that
>will xmit and receive cb?

Not in any sort of graceful or efficient manner...;) ;)

Why doesn't my scanner have CB capability?

Probably not an often-requested feature. I'm on my 4th scanner, and
it's the first one I've seen with CB. (it's a bc7880).

I haven't seen mention ScanCat/ScanCat Gold, for the BC780XLT. Seems full featured with nice bandscope and flexible database import. Link: http://www.grove-ent.com/SFT2W.html
Also haven't heard much about software at 78xlt.net. I always see Scanstar and Trunkscan posts...still wonder what the concensus is. Anyone with experience using one or multiples of these, with pros/cons, appreciated. * I agree with someone who said that reading: this or that "suks", or the other is "good",, is well and good but doesn't give you much of a - review - to go on. Elaborations welcome! :)
thanks,
Rit.

If I took my scanner, could anyone tell me of any relevant frequencies to
listen to?

Thanks,

Peter

4203. Re: Help the Newbie: Antennas

Newsgroup: rec.radio.scanner
Date: 2001-09-02 17:33:15 UTC
From: Craig Davidson <nospam@earthlink.com>
Message-ID: <v3uk7.2032$ln4.167518@newsread1.prod.itd.earthlink.net>
Source record: 60470

In my humble opinion there is a $20 radio shack scanner antenna that works great for everything above 140 MHz. The Catalog number is 20-176. There is a web page at:

http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&category%5Fname=CTLG%5F001%5F002%5F007%5F000&product%5Fid=20%2D176

For you Hams out there this antenna also transmits well on 2 meters and 440 MHz.

This is the best antenna (price vs performance) you can get for all frequencies. A $200 discone antenna only gives 10 percent better performance. If you want significant gain then you need to go to an antenna custom built for one single frequency of interest.

Also, CB and Aircraft frequencies are Amplitude Modulated (AM). Many inexpensive scanners only have a Frequency Modulation (FM) receiver so they couldn't receive CB or Air signals even if you could tune to those frequencies.

Have fun, Good scanning!

The Diamond is great, but I am somewhat frugal. (read as cheap-ass)

This is what I ended up with:
http://www.cis.net/~kingpop/Superdiscone.htm

Mine is mounted at 30 ft, and it seems to work well with my Icom IC-R7100.

<snip>
>you much of a - review - to go on. Elaborations welcome! :)
>thanks,
>Rit.

I'm sure you will get a wide variety of responses. I have used WinScan (full version), TrunkStar780 (full version), ARC780 (full version), and Andy's Program with my BC780XLT. Far and away my favorite of this bunch is TrunkStar. It is extremely easy to use to set up your banks, it sets up trunking systems easily, manipulates your databases efficiently with intuitive cut/copy/paste functions, and has an easy to use control interface for those times that you want to control the scanner from your computer. It takes a scanner that has a fairly high learning curve and puts all its features out there for you to handle easily.

ARC780 works fine for data entry, as does Andy's Program. I had problems with data corruption when using WinScan. It had a tendency to spray the alpha numeric entries into frequency fields and other such garbage. I ended up clearing the memory of the BC780XLT to restore operation and then reloading my banks with TrunkStar and haven't looked back.

Good luck,

Ender

It's now called a 'Yearbook'.

Nothing specifically listed for St. Helens.

Warrington; Widnes & Runcorn; Two in Wigan;
Two in Preston; Oldham; Kirkby/Maghull; Darwen;
Two in Bolton; Accrington;

I'm not going to post contact details for these. If you
indicate which ones may be of interest, I'll post details.

Be aware these are amateur radio clubs and as such may not
have a lot of interest in scanning.

The transmitter is desensing the inputs of your radios. I would suggest trying
a band-pass filter at the input of your radios, for what bands you are
interested in listening/operating on.

Good luck with the privacy of the F-1 teams. We will bring ours as well but I would guess it will be scrambled to the hills.

Race control should be ok and the stewards always have good info on penalties.

Have a good time, I for sure will.

Another perspective:

I have dealt with Mr. Knowles and his companies for the last 16 years on a fairly regular basis. I have always found them to be responsive, competent, and responsible. Hopefully, whatever went wrong was the exception rather than the rule.

Just my opinion.....

Trying to find out if it's possible to use trunking scanner bc780xlt
to listen and track north san diego county fire in carlsab california.
Tnx

what is digital in sd and what isn't?

4217. FS: Bearcat 220 (Older model)

Newsgroup: rec.radio.scanner
Date: 2001-09-03 00:38:11 UTC
From: Louis Albert <lalbert@uakron.edu>
Message-ID: <3B92CF03.974720CD@uakron.edu>
Source record: 60484

Bearcat 220 Channel crystalless scanner - aircraft- marine- public service..

Low Band 32-50MHz
Aircraft 118-136MHz
Amateur 144-148MHz
High Band 148-174HMz
UHF Band 420.440-470MHz
UHF-T Band 470,0125-512.45MHz

Visually about 8, electrically It does work! I checked it with a 2 m and a 440 repeater and they worked. How much better I don't know.

Asking $35.00 or offer

I think I bought this scanner in the middle '70s but I'm not sure.

Louis WA8PHD

I brought mine last year, but no luck....

First off, if you can find an updated frequency list you've luck is so good
that you should run right out and buy a lottery ticket ;-)

Second, even if you can get a few frequencies, they scramble everything! The
best you can hope for is the race broadcast and the tracks safety crew, but
I wasn't even able to tun that in last year :-(

Best to leave it at home...

4221. Re: ham radio listening

Newsgroup: rec.radio.scanner
Date: 2001-09-03 02:10:58 UTC
From: cathexis@erols.com
Message-ID: <3b92df77.271666798@news.erols.com>
Source record: 60488

Hi there,

Dave had good advise. I'd like to comment on
what you might hear. Although there are groups in
Ham that like to work on Emerg. Preparedness Drills
and such, the great majority of all Ham comms are:
1. Ragchewing
2. DX'ing
3. Contesting
Probably in that order.

Ragchewing is basically shooting the breeze.
you could hear anything when 2 Hams start ragchewing.
Since you and I both live in VA you might appreciate the
best QSO (two-way radio contact) I ever had was a
couple years ago when I started a ragchew with a German
Ham who lived in Costa Rica. He wanted to know if I'd
ever heard of Virginia's famous "Beale Treasure " story.
When we clicked on that the QSO lasted 2+ hours on
the 17M band from Costa Rica to Northern VA. Turns
out he moved to CR because he's a treasure hunter and
was after loot on Cocas Is. (the "Treasure Is." of real
history). We've been friends ever since . Though neither
of us found any treasure ! <grin> Most ragchews are
just about each other's rigs and so forth, but every now
and then you connect.

DX'ing is a term derived from the old morse code days
and means distant communications or, to go for. seek out
the most rare or distant QSO's possible. It's loads of fun.
I've hit Antartica 3 times, including the US base at Geographic
S. Pole. Comms here are quick signal reports and sign off to
grab the next ham elsewhere. Virtual real-time logging of such
DX is now available on the internet, allowing you to use your
PC to jump to the hot spots.

Contesting is a solo or group/club activity that is grabbing
the fastest for the mostest. I don't do it and care for it but many
do. You're liable to need a big rig to be competitive at contesting.

All 3 of these activities are technically available on VHF/UHF
but notice that all my examples are HF only. Most Hams today
enter using VHF/UHF as that's where your Technician priviledges
land you. But I urge you to check out some of the HF Ham Bands
to really appreciate the possiblities as a Ham. By the way, if your
Heather is considering this hobby too be warned: When it comes

to gathering QSO's she's gonna leave you in the dust! Ladies aren't that common and always get fast responses. (and I've never heard a rude one). Try listening to 10, 12,15,17M bands during day and 20, 40, 80M at nite - especially 20M. 20M at nite goes world-wide.
Hope all this blather was a help and not a bore.

Andrew/KG4JBM

>what is digital in sd and what isn't?

I could be mistaken, but I thought all of the digital systems were running on the 800 and/or 900 band only.

I assume the actual name of the agency you are asking about is the North County Fire Protection District? If so, according to the FCC's website, all of their radios operate in the VHF-Hi band. The only exception is the callsign WPJY683, which works on the UHF band.

If you need their frequencies, just go to the following web site:

http://gullfoss2.fcc.gov/cgi-bin/ws.exe/genmen/index.hts

When you get there, click on the "Licensee/State" link and enter "North County Fire Protection District" verbatim in the Licensee Name block, then select CA and hit the OK button.

Once you're there, you will see that they have 9 different callsigns in use (ignore the Salinas locations - they aren't related to the ones you are interested in).

But to make things easier for you, here are all of the frequencies you will need:

150.805
153.815
153.89
154.235
154.205
154.25
154.265
154.28
154.295
154.31
154.355
154.385
154.415
154.43
460.5375
460.5625

465.5375
465.5625

I seriously doubt that any of these are digital, so you should be able to pick them up without any trouble. Enjoy!

Thanks. I posted a similar question on ras.f1 last year and had some (I think) Austrian moron flaming away that all F1 teams were/are in the clear, why the hell didn't I know what I was talking about, etc. (a normal risk of ras.*).

I'd take an ordinary AM/FM, since there likely will be US radio coverage available. There was last year.

4228. Help the Newbie: Antennas (Part 2)

Newsgroup: rec.radio.scanner
Date: 2001-09-03 03:09:50 UTC
From: nixx@sanclemente.com
Message-ID: <3b92ea73.53144462@news-server>
Source record: 60495

Ok, thanks for all the advice. Here's what I've done so far: I took the TV antenna out of the basement and mounted it on the chimney (nothing to lose, I'll mount something there anyway) using good coax and am getting great results on both air and trunk.

Or am I?

I've read articles on antennas that have led me to think this (I'm looking for corrections here). If I am after broadband stuff, I should go with a discone of some sort. If I want to get distance (but narrower freq range), I need to have a Yagi-type thing. One article pointed out the holes in the TV antenna coverage, and the direction problem. Example: now I have Yagi pointed north (vertical) somehow, so I can get air from 35 to 40 miles away. South, about 15 to 20, but spotty. Trunk is only north, in my home county. 2 meter stuff has been maxed at 30 miles, but to the south. If I search the air band, I get non-stop action (I've charted over 100 different freqs in one afternoon). I live in a rural area with big cities 30 mi N and S.

Questions: How can I tell which direction this thing is pointing (mounted vertically)? Is this a decent setup (I know I have loss on the f connector to twin-lead to the antenna), or am I missing it all? Is there any way to test antennas other than expensive test equipment or seat of the pants? I think I understand the relationship between the antenna and the freq, at least on J-poles, but how does this transfer to a Yagi? Can I modify it to get even better reception between 119 and 136 (for example)?

Currently, only Ferrari and possibly McLaren uses encrypted radios.
I've been working on lists of frequencies since Australia, and there
is a Yahoo group that is possibly the best source for current scanner
freqs. You can contact them at f1scanner@hotmail.com. I will be
continuing to work on frequencies, and will post them as the race gets
closer, and after Saturday qualifying when I get home.

BTW, we listened to the teams at the CART, ALMS and Trans Am races at
Mid-Ohio last month, and it was great. It ain't just for NASCAR!

4235. CHP freqs - need any or have any I don't have?

Newsgroup: rec.radio.scanner
Date: 2001-09-03 05:31:09 UTC
From: Jughead <jugheadx@xisp.com>
Message-ID: <rms5pt83tjv2g177d38g6dai2j2878c0aq@4ax.com>
Source record: 60402

I was already aware of the fact that the CHP had added 39MHz frequencies to its arsenal, but no sites out on the Net seem to know about just how common the 39MHz freqs are starting to become.

So out of pure interest in CHP happenings, I decided to do some research using the FCC's database. I always wondered why the only time I could ever seem to pick anything up from the CHP is when I'm really close to a patrol unit that happens to be transmitting on a freq I already knew about or when I pass within a few miles of one of their repeater sites. I searched for all Public Safety-allocated frequencies in California and came up with the following freqs (along with base station locations). Also, there are at least a few 39MHz freqs being very actively used here in Southern Cal, which I found through this FCC database research. I picked up quite a bit of data from the database files and copied it straight across from the FCC's website to an Excel file. There are over 2,300 combinations of frequencies, callsigns, and transmitter sites that I know about. If you have any additional freqs or info to add, please point it out here in these groups. I'm also looking for any additional station numbers that aren't already known about at the following URLs:

http://www.tstonramp.com/~salamone/scanner.htm
http://www.socalscanner.com/

Both appear to be missing a lot of stations and I'd love to be able to find a list of stations with unit callsigns somehow. Not even the CHP site seems to include any information on this. Does anybody know where I can obtain this info from?

Also, if anybody here would like to take a look at my Excel file (not really elaborate but it has probably all of the info any scanner nut would really need to monitor CHP), I've posted it to the following URL:

http://surfree.homestead.com/jughead/files/CHP_scanning.zip

I'm trying to create a complete list of station numbers for this spreadsheet, so if anybody can give me any info I don't already have, I'd greatly appreciate it. Also, if anybody can provide me with a complete list of the CHP's 9-, 10-, 11-, 12-, etc codes, I'd greatly appreciate it. The sites I know about show only the most often used codes, but there are times like tonight when I hear a code that I can't find and wouldn't mind knowing what they're saying. I'm eventually going to add these codes to another worksheet in that file.

This sounds like control channel data burst or digital voice, that may
be sharing the trunking frequencies after the analog conversation is
over. It also could be data bursts for water, electrical, gas or sewage
flow meters. The State Police Motorola 800 Mhz trunking system around
Boston, Ma has tons of talk groups devoted to utility meter telemetry
data. With out a trunk tracking radio it's hard to tell what this is. If
you trunk track, you can lock out this type of data and just listen to
analog traffic. What kind of trunk system/freqs. is the wave file form
Is it a EF Johnson LTR system? If so, this in fact may be control
channel data burst associated with the channel switching. I've never
worked EF Johnson, may be some one else can help out on this. I use a
PR0-90 Radio Shack Trunk Tracker to listen to Motorola trunking in New
England have a GE Ericsson system programmed in conventional mode
for Manchester NH it's 800 MHZ and the GE Ericsson VHF system for
Goffstown NH. I recommend up grading to a trunk tracker, BC 245 XLT
Radio Shack PRO-94A or PRO-92 A or B. THis should help get more out
of all the turning in the county.

Well, I visited a booth on Georgetown Ave outside the track on Sat. - they
told me to come back on Sun. morning and they would have updated
frequencies. So I did and they gave me a complete list. However, I found
most channels to be garbled static and a few were in different languages.
Mostly I just listed to race control and the telecasts.
Maybe they gave me bogus frequencies or maybe they're all scrambled, I don't
know. If somebody has better info I'm interested too.

I know this may sound hoakey, but if you buy a set of amplified
television "rabbit ears", they may do the trick quite nicely.

It is important that you get a pair with adjustable gain, such as
from 1 to 15 dB.

I saw a flyer the other day from Radio Shack where
they had one for around $16.

>
> Or am I?

If you're hearing what you want to hear, I'd say you're getting good results.

However, with a directional antenna, unless everything you want to hear is in one direction away from you, I'd either use a rotator with it or switch to an omnidirectional antenna. You have to decide on the tradeoff between having the high gain of a yagi antenna vs. being able to hear signals from all directions.

On a yagi antenna such as a TV antenna, the pointed end or end with shorter elements is the "front" of the antenna. This is the end you want to point toward the signal you want to receive. As far as the length of the elements, I don't think you need to modify the antenna in any way to increase performance. You probably won't notice any improvement at all if you changed the length of the elements. A TV antenna is a wideband receiving antenna anyway, designed to pick up TV signals from low-VHF to UHF. It's well suited to scanner use if you mount it vertically, which you have.

One more comment: For listening to air band, you probably don't want a directional antenna since aircraft will be at all directions from your location. Reception of aircraft from hundereds of miles away with even a modest antenna isn't unusual since most aircraft are flying around 30,000 feet and have a vast range. Hearing the ground stations is a different matter, since normal line-of-sight rules apply.

Oh, please. Were you really there?

Every team was monitorable last year except Ferrari and McLaren.
They are the only teams that scramble.

The problem was SO much interesting stuff it was hard to choose what to
listen to.
Here is the list I started with. Not all were correct, but close enough
to begin with.
It was a entire season out of date when I got it and STILL was 80%
accurate for the USGP.

DRIVER Team Frequency

1 Mika Hakkinen McLaren 414.1750
2 David Coulthard Mclaren 415.2375
3 Michael Schumacher Ferrari 458.2125
4 Reubens Barrichello Ferrari 458.7000
5 Heinz-Harald Frentzen Jordan 456.3875
6 Jarno Trulli Jordan 456.8625
7 Eddie Irvine Jaguar 454.5625
8 Johnny Herbert Jaguar 454.6875
10 Jenson Button Williams 169.4900
11 Giancarlo Fisichella Benneton 458.0875
12 Alexander Wurz Benneton 458.9000
16 Pedro Diniz Sauber 460.6500
18 Pedro De La Rosa Arrows 165.8375
19 Jos Verstappen Arrows 166.8525
20 Marc Gene Minardi 452.6750
21 Gaston Mazzacane Minardi 453.7000
22 Jaques Villenneuve BAR 457.8875
23 Ricardo Zonta BAR 453.9500

Race Control Facilities Management Medical

166.5875 166.6500 165.2125

Thanks for the clarification, Tom. I figured the pointy end of the
Yagi was the front, but what happens when you mount vertically? Is
either broad side of the antenna now the "front", or does it receive
equally from each side? I've read about the rotor thing, rotating the

vertical antenna, but that means one side is stronger, right?

As far as hearing what I want to hear, I have no benchmark to compare my reception with. I can't tell if I'm receiving well or not.

Interesting. With Jim Bo mentioning he hears the same thing even with his trunk tracking 780, I'd begin to wonder if this is, indeed what's going on. But isn't Astro the only system that handles digital radios right now?

>What kind of trunk system/freqs. is the wave file form
>Is it a EF Johnson LTR system? If so, this in fact may be control

>worked EF Johnson, may be some one else can help out on this.

It's an Ericsson EDACS Wide Area system. These are all analog aren't they?

>I recommend up grading to a trunk tracker, BC 245 XLT Radio Shack
>PRO-94A or PRO-92 A or B. THis should help get more out of all the
>turning in the county.

Well, I already ordered myself a BC245XLT on Friday night. You should never suggest Radio Shack to me <g>. I have a Pro-60 that I bought for the sole purpose of monitoring military aircraft. That thing is such a pain in the butt to program when compared to my BC220XLT. Its sound quality also sucks compared to my 220 (put some headphones on and you'll hear it out of only one ear with the Pro-60 but both with the 220). But now I can't wait for the BC245XLT to come in so I can just use my PC to program the scanner.

Here are some railroad frequencies for Houston, TX, for those who are
interested in railroad scanning.
All frequencies in MHz.

Legend: Railroad Name (reporting marks) -- division name if applicable
Legend: AAR channel # -- frequency -- subdivision/point name(s) if applicable

Paul.

Burlington Northern Santa Fe Railway Company (BNSF) -- Houston Division

30 -- 160.560 -- Baytown Sub
92 -- 161.490 -- Houston/Galveston Sub

Galveston Railway (GVSR)

39 -- 160.695
83 -- 161.355

Houston Belt & Terminal Railway (HBT)

28 -- 160.530
38 -- 160.680

Port Terminal Railway Association (PTRA)

40 -- 160.710
49 -- 160.845
64 -- 161.070
69 -- 161.145

Union Pacific Railroad (UP) -- Houston Division
Note: not all frequencies are used on all subdivisions at all times.

10 -- 160.260 -- Avoyelles Sub (Kansas City Southern)
14 -- 160.320 -- Lufkin Sub
17 -- 160.365 -- Beaumont Sub, Galveston Sub, Glidden Sub, Houston East Belt
Sub, Strang Sub
20 -- 160.410 -- Angleton Sub, Baytown Sub, Brownsville Sub, Glidden Sub,
Harlingen Sub, Kosmos Sub, Livonia Sub, Palestine Sub

24 -- 160.470 -- Alexandria Sub, Baytown Sub, Glidden Sub, Livonia Sub
27 -- 160.515 -- Anchorage Sub, Beaumont Sub, Lake Charles Sub, Livonia Sub
33 -- 160.605 -- Houston Mobile Phone Patch
37 -- 160.665 -- Coleto Creek Sub, Glidden Sub, Port Lavaca Sub, Terminal Sub
40 -- 160.710 -- Avondale Sub
42 -- 160.740 -- Settegast Yard
44 -- 160.770 -- Glidden Sub, Houston East Belt Sub, Houston West Belt Sub, Terminal Sub
51 -- 160.875 -- Lafayette Sub
54 -- 160.920 -- Avoyelles Sub (Illinois Central)
59 -- 160.995 -- Strang Sub, Terminal Sub
67 -- 161.115 -- Alexandria Sub, Anchorage Sub, Livonia Yard
72 -- 161.190 -- Glidden Sub
77 -- 161.265 -- Alexandria Sub, Livonia Sub
78 -- 161.280 -- Strang Yard
86 -- 161.400 -- Baytown Sub, Englewood Yard
89 -- 161.445 -- Beaumont Sub, Bryan Sub, Eureka Sub, Galveston Sub, Navasota Sub, Palestine Sub
90 -- 161.460 -- Henderson Sub, Palestine Sub
96 -- 161.550 -- Wharton Sub

>2. DX'ing
>3. Contesting
>Probably in that order.

Oh, but of course. Why do you think we are called "hams?" :)

Ragchewing is what most of us do, and many of us are into DXing. And yes, the emergency preparedness drills are vitally important to help us keep our emergency communications skills honed to a fine point.

There is also the public relations aspect. Many Amateur Radio clubs provide communications for public service events, such as bike rides, marathons, air shows, etc.

During a natural disaster, it is not unusual for one to hear emergency communications on several frequencies at once. We did so here in Houston when we were hit by Tropical Storm Allison.

Paul L. Gray, Jr., N0JAA
3-year Director, Brazos Balley Amateur Radio Club

>their scanner setup.

Yes the data files can be exchanged with other users. They are stored
with a format extension of *swg. If you join the following user
group:

http://groups.yahoo.com/group/TrunkStar780

... and enter the files area, you will find the beginnings of an
archive of user frequency databases from around the country. Even if
none of the locations are of interest to you, the files show different
methods for organizing the banks and setting preferences. Examination
of any trunked systems that people have saved there can answer
questions about the various ways to accomplish trunk scanning and how
to organize talk groups and setup such things as universal i-call
monitoring. I like seeing how others have setup their receivers.

Whether mounted for vertical or horizontal polarization, the antenna will receive best in the direction of the shortest element. In general, it will receive worst off the sides. Reception off the back of the antenna (longest element) is usually better than off the sides.

When you say you mounted it vertically, I assume you mean with the boom horizontal and the elements vertical.

That was pretty much what I experienced, however a BIG thank you to F.
Yaskin and Mark P Gregoire for the lists and website info! Hopefully those
numbers will still be up to date in another month?!

I did a LOT of searching on the internet before last years USGP, and while I
was able to find a lot of sites that listed the teams frequencies, none of
them were up to date.

Here in the USA, most CART, IRL and NASCAR events have a few different
vendors renting scanners for the weekend, and at these booths/trailers you
can buy (usually for $5 US) an updated frequency list for the weekends
event, but I never saw a "track scan" or "racing radios" trailer at the USGP
last year. Not sure which booth on Georgetown Road you found your list but
would be curious to know if it was one of the "regular" scanner rental
trailers or some privateer?

Regards,
Jay J

4270. Car Scanner Booster - Incoming

Newsgroup: rec.radio.scanner
Date: 2001-09-03 23:01:29 UTC
From: ML <maillist@brunerhaus.com>
Message-ID: <tp82ugbnoga9a9@corp.supernews.com>
Source record: 60437

I am new to scanners for cars. I have a Bearcat car scanner for standard frequencies and a generic antenna for it.

Is there any kind of booster so I can get much better signals for listening? I do not want to get one that is very tall since this is on my car. I have seen new ones that police use for their radios that are about 2-4 inches high but can't locate what they are.

Thanks.. NB

I am testing a new BC80XLT scanner. I'm happy with the police and fire freq's I'm getting. I don't know much about these; and I notice that some of you have scanners hooked up to your pc's. Is the BC80XLT worth keeping?, and if not which scanners would be good for my pc?
thanks,
rick

The first problem is scanner powers up I can input frequencies and I can get the squelch to work. It scans OK but it will not receive. (the back light does light)

The second one will not squelch and back light does not work. also no receive.

Try a Radio Shack Mag Mount scanner antenna, this may need an adapter
for the co-ax connector on the antenna end-to the bearcat antenna jack.
Radio Shack has all the adapters you'll need. If you don't want a"mag
Ring" stain on the car's finish, then get a bolt on trunk"lip mount"
scanner antenna. A good antenna mounted outside the vehicle will
improve the radio's reception.

The catalogs usually have a coupon GOOD FOR the price of the catalog,
so on the next purchase you get your money back. I've gone in
bought the catalog turned around found something in it and used the
coupon right away to make a purchase, getting the price of the catalog
back. So what's the problem don't you need some co-ax or connectors,
how about batteries. One pack of NiMH AA cells or a pre paid phone card
could wash the price of the catalog, getting the purchase price back.
I have shopped at Radio Shack sense I was 10 years old and love the
the catalogs. Don't get one every year but glad they are there.

>Art Harris N2AH

Yes, I did mount it vertically (elements vertical). Not to belabor
this point, but every article I have read regarding the use of a TV
antenna for scanners suggests the use of a rotor to rotate the antenna
around the long axis (using a upside-down L mount). If the antenna is
directional, and has poorer reception off to the sides, why is the
rotor necessary? It would seem to me that you could just fasten it to
the mast directly and go with it.

4280. trunking newbie please help

I am wanting to listen to trunked systems i have a pro-2052. I don't have the frequencies, but am wanting to find them. I have looked on the net for them but can't find what i want. Does anyone have a page that has .wav files of what the data channel and other channels sound like in convential scanning mode? If they do that would help me out. thanks

Try to figure out what you are mostly going to listen to and then find an antenna cut for that freq range. For example, for VHF-hi a ham 2M/70cm antenna would probably do a good job. For 800MHz and the like a cellular phone antenna may do a good job for you.

Thx. for a nice follow-up. Re: Emerg. Comms, I've heard that Hams were also very important after Hurricaine Andrew of a few years ago in fla. Apparently, some neighborhoods were out of touch for several *days* after storm and Hams were only link. Many think what they thought in fla; "Oh, I'll just use my cell-phone." They forgot that the same storm that blew down their telephone poles would be the same storm that blew down the cellular towers, leaving many customers high and dry. Become a Ham. Food for thought.

Well, unless you are lucky enough to have all the agencies you want to listen to in a single direction from your house, then you need a rotator to point the antenna in the proper direction for the agencies that you're trying to hear. As an example, where I live in Oklahoma, Oklahoma City is 50 miles to the south-southwest of me, Tulsa is 50 miles to the east. Pointing a directional antenna at either one will place the other off the side, and null them out. So I would need a rotator to aim the antenna, depending on which city I was interested in at the time.

I am going to get some flack from the group maybe,but the cell "look alike" that Rad Shack sells (Through the glass) works like a charm......big difference in any mobile (and handhelds) I have had in my vehicle....I'm saying about fifteen miles + ,doesn't sound like a lot but it really is when typical scanner reception is "line of sight" and we have some hilly roads up where I live and get even good reception in and out of the dips.......just a thought...good luck..there are some super mobile scanner antennas out there but for cosmetics like you're asking,this might do ya well.....

[snip]

It appears you have a known, common problem with BC200XLT scanners.
Most likely the problem is that a transistor (Q201) has failed. Go to
the following website "Repair Tips For Bearcat Scanner Radios". Scroll
down to the section "Uniden/Bearcat BC200XLT Portable - Loss of
Audio and Dial Lamp":

http://www.bithose.com/serfaq/REPAIR/F_BC_Repair.html

Alternately, I think Uniden repairs scanners with this problem
for a flat fee (was around $50).

Hi,

If there is anybody on this group that doesn't have access to HF, and you're inetersted in Oceanic ATC,

goto http://www.air.academy.co.uk:8080/ramgen/encoder/test.rm

The frequency is 5649Khz. It is on most of the time, but is in test phase. During the day it's not very good,

but springs to life around 10 pm UK time.

Regards,

Daniel.....

A Yagi antenna is a beam antenna that is effecient in receiving signals from one direction. However, they don't necessarily have to have a narrower frequency range. Many, such as your standard TV antenna, are wideband. A log-periodic Yagi is another example of a wideband beam. In fact, quite a few TV antennas are log-periodic Yagis. They will work well as scanner beams when turned vertical. I don't think you need to worry about any gaps with a TV antenna, since they will still pick up frequencies outside the TV channels. However, the antenna you mentioned will probably work better.

Which is why I use an omnidirectional antenna. I guess the optimal scanner antenna would be, say, four log-periodics facing north, south, east, & west. Hopefully they would have enough beamwidth to pick up a station that's, say, southeast. But in practice this would be a very bulky antenna, destined to come down in the next windstorm or until your wife gets tired of looking at it.

PA-SitRep
Pennsylvania [Emergency] Situation Report E-Mail List

The PA-SitRep mailing list is a free communications tool that will enable you to monitor and report on major emergency situations throughout the State of Pennsylvania including weather emergencies, natural disasters, environmental disasters and civil disturbances.

The list is extremely low volume because messages to the list are limited only to those containing verified emergency situation reports of Major Import within the State of Pennsylvania.

The list is run from a private server at my expense, so there are no advertisements necessary or permitted. Rumors, hearsay, unconfirmed and or inaccurate reports and chat are strictly prohibited.

Subscribers do not have to be members of any specific emergency services organizations to join the PA-SitRep mailing list. ANYONE willing and able to comply with the posting guidelines is welcome.

The list protocol for posting messages is designed to cater to those who use digital cell phones or alphanumeric pagers for text messaging. The first paragraph of the messages posted to the list are brief summaries limited to 100 characters, followed by a more detailed situation report.

For more information, or if you'd like to subscribe, please visit the following web address:

http://www.pa-sitrep.com/pasitrep.htm

Thanks. And we'll look forward to your participation.

Last time I was a club member, we didn't allow CB-ers to be
members, and scanning wasn't invented.

Possibly club members have more catholic tastes these days.

>K5MAR

Mark, I know you're right. My only question (I'm trying hard to be
clear, so bear with me) is the direction of strength for a TV antenna
when you mount it vertically. I can understand the concept if the
antenna is mounted horizontally, then the pointy end is "hot" and gets
pointed towards the signal source.

But, if you have this thing pointed "hot" end up towards the sky, then
what the devil difference does it make how you rotate it, or even if
you do? That leads me to think that one side of the the "flat" end
(the side that normally faces the sky/ground in a TV app) is "hotter"
than the other. Am I making even a little sense here?

Please understand, I know y'all are right in advising me to get a
discone, or whatever. But, this TV antenna is now stuck "cold" end
down in an unused chimney (!), not even on a mast, and I get non-stop
air and really clear trunking from my home county. Since I apparently
can't test this thing to see how efficient it is, my only hope is to
buy a $40-100 discone and just pray that it works better. If it
doesn't, then I'll really feel (even more) stupid.

Dave

OK, it appears to me that your antenna is pointing straight up in the air, which would work great if the signals you want to hear are in space. By vertically, we mean the elements must point up & down, not the boom. When you look at it from the ground, it should look something like this:

```
| |
| | | |
| | | | | | |
---------------- Signal source -->
| | | | | | |
| | | |
| |

Ground
|
\|/
V
```

The beam should be mounted horizontally, and the elements pointing up & down. The beam should be pointed toward the area you want to listen to. The rotator will allow you to turn the beam and aim it at the point of interest.

4319. Cleveland Ohio PD back in clear?

Newsgroup: rec.radio.scanner
Date: 2001-09-05 01:04:16 UTC
From: Mike Mayer <mayermh@ix.netcom.com>
Message-ID: <9n3u16$s63$1@slb1.atl.mindspring.net>
Source record: 60536

I heard a rumor today that the Clevland PD is rebroadcasting in clear audio in the lower 300MHz range somewhere. I cannot confirm this yet, but will be searching that band to see what I hear. Unusual since it's usually just military and TV broadcasts.

They used to be normal analog in the 450MHz range a few years ago, but since have gone to 800MHz trunked, w/digital audio, impossible to scan (unless you like digital hash).

I know that if the 800MHz system goes down, departments usually fall-back to their "old" repeater systems until the trunker system is fixed. But, this sounds different.

Anyone else heard this rumor?

Yes, this is because propagation on and around that frequency is slim to none.
The Maximum UF during the day for shortwave/utility is around 18 MHz or so,
with the Minimum UF usually around 9 or 10 MHz. It doesn't come down until
after local sunset.

Paul.

Flowing Voltage
Subject: Radio Shack: A Shadow of Its Former Self

The only real problem I have with Radio Shack these days is that it is not a "true" radio store anymore.
During the 70's and 80's, Radio Shack was a real (at least in my opinion) hobbyist's store. It was no problem to purchase piece parts, kits, perf boards, soldering irons and etc. and the only brand that they sold was their own lines (Realistic, Archer, Optimus, etc.).

Nowadays, Radio Shack has evolved to become a shadow of its former self. Kits are almost nonexistant. Remember the Science Fair experiment kits? My mom gave me one for Christmas one year, and that fueled my interest in electronics. I rarely ever see them now.

Their inventory of piece parts has dwindled to maybe half of what it once was. It is now easier to buy piece parts from DigiKey or Mouser than it is to go to a Radio Shack and get what you need.

Do you remember when your local Radio Shack was staffed with a sales staff who were Amateur Radio Operators or who otherwise knew something about electronics? Nowadays you're lucky if you are helped by a sales person who knows what a resistor is!

Now, it seems that Radio Shack's main emphasis is cellular phones, with a sideline into TVs and stereos. I suppose that Radio Shack feels it needs to further evolve with the current economy. That's all well and good; but at the same time, they have virtually alienated the people who used to be their bread and butter: the electronics experimenters.

The opinions expressed here are mine, and do not necessarily reflect the opinions of anyone else.

Paul.

I just went in to BUY a Radio Shack catalog, they said I would have to
pay for the catalog... They asked my name, to ring the catalog sale up
on the computer cash register.

When my name came up on the computer, he told me the catalog would
be "FREE", because may name is in the computer.

Again buy some batteries, blank video tape, the last thing I purchased
would be several SO 259 connectors, My name gets dropped from the
computer from year to year, when no purchases are made. It's a good
thing to be in the computer, so mailings of sales flyers are sent and
now the catalog is FREE! If your name is in the point of sale computer.

Try this site:

<http://www.strongsignals.net>

go to the trunking boards and click SITE LINKS and look up
trunkng frequencies in your area.
Just remember to follow the manual for selecting trunking mode
for your PRO-2052 BEFORE entering the trunking frequencies
The PRO-2052 or any hobby trunking radio will not work correctly
if the mode I.E.: Motorola or GE Ericsson (EDASE) is not enter into
the bank that is the bank has to be set up for the trunking system
before entering the frequencies.

Source record: 60545

If you check out the listing at the top of the trunking board for
your radio the PRO-2052 it may be capable of working directly through
a computer via serial port and Radio Shack may sell a cable and software
and under software control the PRO-2052 may be able to do conventional
and truntracking at the same time.
If there are trunking systems in your area, listed on the data bases
at the strong signals trunking board try programing in the frequencies,
using the correct trunking mode THEN LISTEN IN CONVENTIONAL mode,
manually step through the bank of frequencies until you hear a loud
DATA sound and this will be a control cannel.
This will allow you to hear what a control channel sounds like and you
will know that the system is up and your PRO-2052 ,if set up rigth,
should be able to trunk track it.
Another fun way to get new systems is search for control channel
frequencies. Then go to strongsignals.net and click on the FREQUENCY
BOARD scroll down to the bottom and click on F. C. C. site
and look up the frequency and cross reference it to the call sign to get
the rest of the frequencies that got with the control channel.
Once you have listened live, over the air to some control channels
you will be able to tell them apart.

Remember GE Ericsson trunking systems HAVE TO BE ENTERED IN CORRECT
ORDER, that is follow the numbering system that you will find in
front of each GE Ericsson frequency in the data base lists.
This is tough when trying to work a system form the F. C. C. database
they do not have the trunking order listed, It's better to stick
with other data bases for GE Ericsson systems that have the numbering
order.

Agreed. Was surprised to find my local comp. store, "Micro-Center"
had a better tools section than RS (except for soldering irons). Much
better. Electronics are becoming increasingly a disposable commodity
and therefore there's no need for repair or kits. Hence, no market. Sad

but true. Worse, what components that are on boards out there are so miniturized they're basically un-usable elsewhere. Manufactures would tell us this is the price for our modern toys. I'm not sure I agree and when (or if) common electronics ever become burdened with Clipper Chips or Censorship-type Big Brother devices then people will pay the price for their apathy. Better shut up , getting too paranoid for most I think.

Dave,

Tom has pretty well nailed it, with diagrams no less! What we had here is a failure to communicate. When you said pointy end, you were talking about the ends of the elements, we were talking about the end with the shorter elements. Reception is broadside to the elements (rods), and is directional in the direction of the shorter elements. If the antenna is shaped in a "V" then the open end of the V is pointed at the signal source. Think of a comb. If you lay a comb flat on the ground, the comb is horizontally polarized, and the narrow end is the direction of the source. If you stand the comb vertically on it's long side, then it is vertically polarized, the narrow end still points to the source. If you replace the comb with yagi (beam) antenna, you feed one end with the coax and the other end is pointed at the source. If it's a log periodic, such as a TV antenna, the longer elements are at the back of the antenna, and the end with the shorter elements is pointed at the signal source.

Hope we've explained this better to you. Sorry I don't have any fancy diagrams, not as talented as Tom.

In Monitoring Times, the TRACKING THE TRUNKS author mentioned
than Canada required a LICENSE or permit to even own a Digital Radio.
At this time no hobby radios are available to work digital or Motorola
Astro digital radios. If you can afford $3700 for a system radio and
find someone in the business to sell it to you... this is the only way
Some test gear selling for $20000 may be able to track digital voice,
but postings I've seen mention the system owner would have to proved
the software to load into the test gear, before it will go digital.

i'm wanting to track these frequencies, i'm not sure if i have all of them. I'm not sure if they are motorala type I or II. Is there an easy way to tell. Also after i program them in and start the search it searches for the data channel, it finds one, but i wondered if that was the correct one. So I removed that one from the list and started again, it found another one, i did this a few times and found that it has 5 frequencies that it liked as a data channel. I have a pro-2052 and in the manual it says it only uses the first one it finds, is it possible that all 5 are data channels. I also don't know any of the ID and/or subfleets(if type I) nothing apears and i don't hear anything when i hit search. Thanks for helping, i'm new and still trying to learn.

No, it wasn't. I remember Radio Shack in those years. They sold "cute" stuff that barely worked and was incredibly obsolete. The P-Box stuff was junk. I know. I built a few when I was 10 and 11 years old. P boxes were awful because the plastic was too cheesy. There was no phenolic board anywhere. Frankly, I think it sucked.

You can buy parts there. That's a start. I wish the folks that chose what parts to retail weren't so far behind the times, but it's better than nothing. In any case, I remember the frustration of not having the parts I really needed even back then. It seems their supply chain knows what folks want, but they're quite late at packaging these thing and putting them on the shelf. They've never been good at it, IMHO.

>Their inventory of piece parts has dwindled to maybe half of what it once was.

There were very little room for the Digi-Key and Mouser type operations in those days. An Allied catalog was better, but it was still a much slower operation.

>Do you remember when your local Radio Shack was staffed with a sales staff who
>were Amateur Radio Operators or who otherwise knew something about electronics?

That's not what I remember. The ones I used to know in the 1970s could barely tie their shoes. The dweebs in the 1980s were no better. Radio Shack never paid their sales staff squat. You get what you pay for.

>Now, it seems that Radio Shack's main emphasis is cellular phones, with a

And there are fewer and fewer of us around. The field isn't growing
like it did in the 1960s and 1970s. What would you have them do: grow
and morph or die?

Radio Shack is a business. You're looking at the past with rosy eyed
glasses IMNSHO. If they have a product you like at a price you're
willing to pay, buy it. If not, look elsewhere. You have options
today that you didn't have 30 years ago. Don't cry about the past
--look at what you've got and get on with your life.

: Your help will be greatly appreciated.

I live in Norman, OK, and work in OK City, both in the middle of
Tornado Alley. I strongly suspect that "Tornado Communications"
frequencies are for use in or after a disaster, and/or possibly
by spotters, trackers, and the like.

Yeah. You can add cell capability, 1000 more channels, and increase the scan speed 300 percent.

There are more appropriate groups for such a question,
which is why I've directed followups to rec.radio.scanner.
Not that you can't receive stuff from space on a scanner
(you can), but that's not your interest.

For obvious reasons, people using radio for security
purposes aren't going to go out of their way to publicize
the frequencies they use. You might consult one of the
scanner directories, or the magazines. You may end up
scanning promising frequency ranges from end to end (the
antennas on the radios will tell you which ones). I've
found very interesting stuff this way...

normally the radio shack employees are SUPPOSED to charge you for the catalogs, no matter what year it happens to be. but there are some generous employees out there that just give them away for free. and some choose to charge you for it.

I personally have walked into rat shack in the past to get catalogs. some of the time, I have to pay for it, and other times I get a free one, but with a free one, the coupon on the front is peeled off and put into the trash.

but wait! catalogs are still free! if you know where to get one. I found this one out in the past couple of years. just send an email to support@tandy.com and request a catalog with you snail mail addy. Then they will mail you one. You have to put in your request every time a new catalog comes out; they don't maintain any sort of mailing list. If their supplies have run out, you will receive a catalog when the NEXT new one comes out.

Could someone direct me to where I can find this information...

I am making a list of frequencies to give to the person who is programming some Motorola MT2000's we have ordered. I do not have the manual in front of me.

Does anyone know how many characters can be programmed in the Alpha display window of the radio?

Doe sanyone know if there are .PDF manuals for this radio on the web anywhere?

Thank You,
Steve

From a mailing list I am on:
(8/16/2001)

> What Stations are not "Airborne"?

The ONLY stations that are airborne and that take "live"
reports from the choppers or airplane is K-104, KRNB, KLTY,
KSCS, WBAP, KRLD, KLUV, KVIL, CH 4 TV, CH 8 TV , AND CH 11 TV.
Mix 102.9 (SkyMix 1) reports are pre-recorded and played back
later. Everybody else is in our studio or at the station itself.

> Does KPLX really fly?

At the present time, NO. However, they are an affiliate of
Traffic Dot Com (our competitor). Traffic Dot Com has a couple
of Cessna's they fly around during morning and afternoon drive,
but all they are doing right now is "spotting" (there are no
reporters on board). I believe they use 122.875 & 123.45 to
pass info. Their affiliates are primarily the Susquehanna
stations, SO FAR.

In this past, the Wolf/KLIF copter was owned by Susquehanna
Broadcasting and they footed the bill for maintenance and
upkeep. In the days of Tim Hart, this was the norm, and they
also paid his salary. Then along came Justin and they paid for
his salary and the chopper too. But somewhere in the mix,
Susquehanna decided they did not want to pay for the chopper
and threw the cost of upkeep over to Traffic Dot Com. They
only kept the chopper for a very short period of time before
determining the cost factor was just too high for upkeep, as
well as paying pilots salaries. So NOW, they don't have a
chopper, and Justin is NOT flying (but sitting in a studio
with a chopper sound effect going in the background). BUT,
that's the magic of radio...It SOUNDS likes he's puttering
all over the Metro skies, but he's not....:)

And as long as the listeners THINK he is, well...job done.

-I know very little abut scanners.
-I want to get a scanner.
-Mostly to listen to stuff I'm not suppose to hear.
-Looking to spend, hmm, $50 to $300 I guess.
-I hear that some scanners block some frequencies so I am looking for a way to solder some wires or something to enable full scanning range or maybe somehow get a scanner shipped from Canada.
-Reason behind all this: I was bored one time so what I did on my 900 MHz Panasonic phone is i press the locate/intercom button that lets you find the phone if you lost it in your house. Then i pressed talk so I can communicate to the base. Then I took the battery out of the phone causing the base to start scanning for the phone. In this process i picked up a conversion which was about some pissed off girl who just got dumped by her boy friend (talking to her friend). LOL, I wish I can do this more often but it only happen one more time and the conversation was in Chinese this time.

From: Chris <noone@nowhere.com>
Message-ID: <9n6rhm$a94$1@bob.news.rcn.net>
Source record: 60335

I am moving soon, need cash. I am considering parting with my Pro-2042. It is in flawless condition, has protective film on the screen, no scratches. It is a US model, no cell coverage by itself. It has a european OS-535 board installed, so it can get cell frequencies when under computer control. It would be sold with probe 5 on original disk with full probe manual. The scanner would not come with an antenna. That shouldn't be a problem, since most entusiasts have their own, or can get a replacement one for it for a few bucks. It also has a discriminator tap (1/4 inch phono plug). On my system, under Probe, it successfully scans at 115 channels per second with only the weakest frequencies being skipped.

Anyway, to my point. How much should I sell this for? I'm considering throwing it on Ebay. Any takers here?

I also live in Oklahoma, Post the frequencies and any other information given, such as city, agency, etc. and I'm sure one of us can identify and explain their use. Quite possibly they are used for wx net operations. Example: 151.445 Oklahoma County (Repeater out) Used during severe wx for observations. This is a very good frequency for central Oklahoma, as the spotters will range out to 100 miles or so, tracking the weather.

4374. Re: Radio Shack Pro-2050

Newsgroup: rec.radio.scanner
Date: 2001-09-06 07:58:09 UTC
From: Jim Mac Donald <jmacdon@mitre.org>
Message-ID: <3B972C91.5CFA65CE@mitre.org>
Source record: 60342
Cross-posted to: alt.radio.scanner,rec.radio.scanner

The PRO-2050 is a base model of the PRO-90 Uniden BC 235 XLT.
It will trunk track one (1) Motorola 800 MHZ system at a time.
it can not trunk tack the one Motorola 800 MHZ system and do
conventional together at the same time.
If you already have conventional scanners and only need to
trunk track ONE MOTOROLA system this radio is ok.
The PRO-2052 will trunk track Motorola and GE ERICSSON or conventional
and under software control the PRO-2052 can trunk track and work
conventional at the same time but your married to the computer.
They do not have PL capability. The PRO-2067 anfd PRO-92 DO HAVE
PL and DPL capability and instant tone squelch search/display.
computer upload / download and trunk tracks Motorola, GE ERICSSON and
EF Johnson systems and conventional at the same time.
The Uniden made PRO-2050, PRO-90, PRO-91, PRO 2066 PRO-94/94a PRO-2052
have banks of talkgroups that can be locked out. The GRE made PRO-2067
and PRO-92 PRO-92A/B have 100 talk groups per bank that can not be
broken up. The Unidens scan at 100/ch sec. the GRE's scan at 25/ch sec.
Hope this helps For much more information try radioshack.com or
<http://www.strongsignals.net> from GRE radios <http://www.pro-92.com>

OK, i may sound funny, but well, while just searching the groups i happen to see the radio scanner group. curiously i read few of its messages and it seems interesting to listen police, fire and other dept. i am sll new to it.

i understand you nedd scanner and then you should know the freq. but is it difficult to operate the scanner. is it that simple that you input the freq. in the scanner and there you go listen all the interesting stuff.

which scanner is good at moderate price say 200-300 dollars?

thanks

Maybe they are ham radio Skywarn freqencies? Mostly in the 2 meter
band.

First, I hope you read my response and the URL I gave you regarding
the common No Dial Lamp/No Audio problem in the BC200XLT.

Secondly, (and I'm not trying to be a smart ass here) I would
recommend that you look into your local community college adult
education program.

First I would look at taking a course in basic electronics, then more
advanced courses in troubleshooting, etc. (You essentially would
be training to become an electronics technician.) That is the kind of
basic knowledge you will need, such as how a PLL (Phase Locked
Loop) circuit functions.

If you are still in high school, they may offer electronic in a
Vo-Tech for free.

>Looking for freqs for Pinellas and Hillsborough counties, including Macdill

Here is info for the area:

Notes:
1) Monitoring in the are will require a trunking capable unit.
2) No Federal information available, look into the FLACOM group at Yahoo!
3) Pinellas in the process of moving to a SmartZone system and will eventually swallow up the St. Pete system. Will have a 3 site system, North, South & Countywide. Many of these changes have been occurring recently.
4) Clearwaters EDACS system **may** disappear in the future as well, and PD/FD are the only users since DPW went Nextel.
5) Tampa City is GLORIOUSLY & WISELY chosen NOT to be part of the Trunking/Digital disaster. VHF & UHF analog. Has 800Mhz channels licensed, only 1 of which I have heard active for DPW in analog conventional. (They may loose them in the FCC audit under way, since they have not built the system they were licensed for.)
6) Only need to listen to the Hills. A system at this time since the B never was brought into to use.

Many, many moons ago, a vet brought his electronic bull stimulator into our two way shop (don't ask why he thought they had something in common...), that has a probe to stick in the south end of a north bound bull, and you can figure out the rest. Why they can't just go into the bathroom and do it in a jar, like everyone else - but, I regress - In the course of going through the manual, we learned that the asshole impedance of a bull is ~300 ohms!! Now you can sleep better, knowing this invaluable piece of information.....
Cheers n beers y'all..

Good advice. Best way to scan is from your hotel room. Use an external antenna, if needed, for adequate reception. I have found the standard RS mag mount scanner antenna, stuck on a metal object (like your room safe) will do wonders in these situations.

I just got back from there. about the only place to use scanners is in
the room and maybe poolside. ABSOLUTELY NOT in the casinos!! It will
not be a good experience for you.

Icom Scanner for sale. This scanner receives from 25mhz to 2 gig with a small gap in the middle. This is a large serious type model. Originally sold for almost two thousand dollars. Currently these scanners sell on Ebay for up to 800US depending on shape. Because we are in Canada I would have to go through too much paper work to send to the US so I will sell it here. I have contacted two Communication stores in Toronto to sell these to them they said the would sell this in there shop for $750 to $850 but only offer me $525.00 to 600.00 trade in value. Needless to say I prefer cash instead of trade in value so that is why I am trying the news groups. I will only ship to Canadian addresses if nessesary or if you are in my area I can arrange for delivery at an extra cost to the purchaser. I can also email pictures to you if requested.

For more info please email me.

4388. Re: Best Software for BC780?

Newsgroup: rec.radio.scanner
Date: 2001-09-06 21:46:40 UTC
From: Insight <insight@inmymind.gap>
Message-ID: <Xns9114AA745F168insight@216.166.62.32>
Source record: 60356

I've read ScanPro's web page about their software making the 780 a 10,000 channel scanner, including more search groups than come from the factory, etc.

I've been leery of the software because of these claims and the low price.

Can you give us a rundown of your experience with these features.

TIA.

insight

I am new to scanning & I have heard of ACARS. I got AirNav's ACARS decoder so I just need to know what frequencies to listen on. I've gotten some of the internet but I'm not sure if they are working because I'm not hearing anything. So what are some frequencies & what does it sound like??

BTW, I have a SportCat/BearCat 180

Thanks,
Joe

You won't hear anything much, only squeaks and clicks, in quite short bursts. Hook up your scanner to the PC, start the software and wait. I get quite good results in the UK.

Daniel.....

Vancouver PD, Fire and other areas in the GVRD are using the edacs
(pro-voice) and are very digitial !! I think the EHS are analog so good
luck.

Does anyone know if the Wash D.C. police are trunked yet? I've found regular frequencies and a set of trunked frequencies that are "For Future Use", but the page didn't specify when they were going trunked. I'll be visiting D.C. in a few weeks, so if anyone can direct me to a good freq resource, I'd appreciate it.

Thanks

In the US the primary is 131.55. Make sure the squelch is all the way off on your scanner and you are hooked into the line in jack of your sound card. It does work on the mic in jack but not as well.

Listen to 131.55 with the squelch off for a while and you should hear these little very short burst type noises. It also helps to be close to your local airport.

The AirNav decoder is the best I have found, getting the most messages without error. Also, on the lower right side of the computer screen you should see the signal strength meter measuring the sound coming into the sound card. If this is not moving check you connections, or under file in the program check the start stop choice and your sound card settings.

That radio should work around Ottawa no problem. I have a bc200xltr that suits my needs quite well for at home. I use my FT-50 for a lot of portable scanning due to the fact is has a built in digital voice recorder.. its a nice toy thats for sure... Here is a frequency list for Ottawa if you need it:

Yeah unfortunatly I think they are using AEGIS encryption on top of EDACS digital.. Its quite a shame i think. I used to hear some good action on those old vhf frequencies.

It's the other way around on a image! i.e some scanners will hear cell on 1200Mhz due to an image being produced that is able to get through the pass band of the receiver.

No cell heard on 400mhz unless he is using a converter. Not possible!

cells are ok to use. but it is a piss off when people use them while driving, eating at a restaurant, and even a theater or another quiet place. that is what friggin vibrate is for. Most people talk loud on a cell too. as if the other user could not use them. I do use a cell phone. but there are appropriate times and unappropriate times.

I know the one scanner I did have. forsome reason had images spattered everywhere. it was a RS handheld or it was a uniden handheld. I forget which one. I had annoying cell calls on 30 Mhz area. 1?0 Mhz and in the 400 without a downconverter. I brought the radio back after a few days and said it was too hard to use with cells spattered everywhere. why not just buy a EU or canadian scanner. solves your prob down-converting.

Try looking up information at the following sites;
<http://www.grove-ent.com>

<http://www.crbbook.com>

<http://www.scannermaster.com>

<http://www.strongsignals.net>

If there are trunking systems in your area get a trunk tracker,for
around $200-400, otherwise a $100-$200 conventional radios will work
O. K. Check out this info to see if scanners are legal in the country
where you live or travel: <http://www.strongsignals.net/htm/laws.htm>

>but it is a piss off when people use them while
>driving, eating at a restaurant, and even a theater or another quiet place.

But who decides when and where to jam others' phone calls ... or ... who can make a phone call, and who can't?

If we follow the law, the F.C.C. says all devices that create interference cellular communications are illegal (not type-accepted).

Jeff Multer

You got it, Skip! If you've got nothing better to do than listen to a scanner while you're gambling, you deserve what you get. If you have an earphone stuck in your ear and walking around a casino, you're a threat to their security. Look at it from their point of view. All the security problems i've wittnesed, security comes out of nowhere and the suspect just disappears from the floor. It's kinda incredible really.

Finally figured out how to post correctly. Anyways, I downloaded wacars and have been trying to pick stuff up. I get all kinds of raw data, but I have only one aircraft I.D. Any suggestions on how to fine tune and can I decipher the raw data in some way?
Thank you
Greg
P.s. I am on the east coast right next to Oceana master jet base and am wondering if Giantkiller or the base itself may be interrupting the signal.

I don't know if this is going to work but here it goes...

Police
155.655 - State Police - F-1 (Troop C - Base)
154.950 - State Police - F-1 (Troop C - Mobile)
154.665 - State Police - F-2 (Unit-to-Unit)
154.695 - State Police - F-3 (Statewide Alerts/Emergencies)
155.565 - State Police - F-4 (Criminal Investigation/Tactical)
155.370 - State Police - F-5 (Statewide Police Channel)
155.475 - State Police - F-6 (Nationwide Intersystem)
155.070 - State Police
154.800 - County Sheriff - F-1 (Dispatch)
158.730 - County Sheriff - Unit-to-Unit
159.210 - County Sheriff - Tac-1
155.370 - County Sheriff - Statewide Police Channel
158.850 - Binghamton Police - F-1
155.535 - Binghamton Police - Narcotics/Investigations
154.800 - Binghamton Police - County Sheriff's Channel
155.370 - Binghamton Police - Statewide Police Channel
155.010 - Binghamton Police
453.100 - Binghamton Police
155.130 - Endicott Police
154.800 - Endicott Police - County Sheriff's Channel
155.370 - Endicott Police - Statewide Police Channel
155.430 - Johnson City Police
155.310 - Vestal Town Police - F-1
155.370 - Vestal Town Police - Statewide Police Channel
159.090 - Vestal Town Police
158.910 - Vestal Town Police
159.030 - Vestal Town Police

Fire

33.90 - Countywide Fire Communications - F-1 (Dispatch)(PL 91.5)
33.94 - Countywide Fire Communications - F-2 (PL 91.5)
33.98 - Countywide Fire Communications - F-3 (PL 91.5)
33.82 - Countywide Fire Communications - F-4 (PL 91.5)
45.88 - Countywide Fire Communications - Intercounty Mutual Aid
460.575 - Binghamton Fire Department - F-1 (PL 162.2)
154.370 - Endicott Fire Department - F-1
154.310 - Endicott Fire Department
460.625 - Johnson City Fire Department - F-1
465.525 - Johnson City Fire Department
154.310 - Vestal Fire District - F-1
153.770 - Vestal Fire District - F-2

153.890 - Vestal Fire District
154.355 - Vestal Fire District
453.050 - Vestal Fire District
154.370 - West Corners Fire District - F-1
154.190 - West Corners Fire District - F-2

Ambulances/Hospitals/Medical
155.160 - Broome Volunteer Emergency Squad (PL 103.5)
155.205 - Harpurs Ferry Student Volunteer Ambulance
155.220 - Superior Ambulance Service (Private/Paid)
150.790 - Union Volunteer Emergency Squad Tac
155.175 - Union Volunteer Emergency Squad (PL 103.5)
155.235 - Vestal Volunteer Emergency Squad
155.340 - Countywide E.M.S. - Hospital 1
155.400 - Countywide E.M.S. - Hospital 2
155.280 - Countywide E.M.S. - Hospital 3
155.715 - Countywide E.M.S. - MCI

These are the most active freqs here.
Most county wide ops will be heard on 33.90 and 154.800
The city of Binghamton uses 460.575 and 158.850
Johnson City uses 460.625 and 155.430
Endicott uses 154.370 and 155.130
Vestal uses 154.310 and 155.235
Union EMS uses 155.175
Them main Hospital freq is 155.340

The PL's listed above are accurate but not all agencies use them so if you have a scanner with CTCSS on the receive you may want to disable it. My RELM MS-200 has it and I had to disable the CTCSS so I could hear some of the activity. My UVES Portable with open receive would pick up the signal but the RELM would not until I turned the CTCSS off.

These 12 frequencie will net you 95% of the traffic in Broome County.

What brings you to our area?

Bob C.
Binghamton, Ny

Virtual downconversion? I think you've been talking to somebody who
is making up terms as he goes along.

However, if you were intent on picking up Cell Phone calls, know that
there is an interesting phenomenon called inter-modulation distortion,
or IMD. If you had a very strong, unmodulated signal at, say 450 MHz,
then other signals from 880 MHz might mix (distort) with that strong
carrier and then produce image products at 430 MHz.

In fact, situations like this occur all the time. The scanner antenna
jack usually isn't all that well filtered. It often will admit
carrier frequencies from multiple bands. Put one really strong signal
around four or five hundred MHz and you could easily start hearing IMD
products of cellular telephone conversations.

The recent anti-cellular reception regulations from the FCC alluded to
such spurious signal scanning by essentially outlawing manufacture of
double conversion, 10.7 MHz IF scanners. There was some discussion of
minimum IMD standards, but that never materialized.

However, I still suggest that if you want to receive 800 and 900 MHz
frequencies on your scanner, that you use a downconverter ahead of
your scanner. It will result in less garbage to dig through, and it
will also sound much cleaner.

4424. Updated Scanning Database

Newsgroup: rec.radio.scanner
Date: 2001-09-07 17:17:24 UTC
From: - <psleprob@hotmail.com>
Message-ID: <3B990101.5B4C9D33@hotmail.com>
Source record: 60391

Uploadable data files and documentation for areas such as Orange County and New York City have been added to the site. Additionally, a few of the other files have had minor revisions.

The Formula 1 file has been updated to include more suggestions for alternate frequencies. I will try to update it more as the GP gets closer. *Verified* data submissions are welcome.

We are still looking for people to submit their 245xlt data files (along with brief documentation) to our database! We still need major cities like:

Houston
Las Vegas
Los Angeles
Denver
Summit Skiing Area of Colorado
Santa Fe
Green Bay
Cleveland
St. Louis
Etc., Etc., Etc.

This is an 'all volunteer' effort. Thanks!

http://home.earthlink.net/~dougfisher/scanner.html

4425. Re: RS Catalog

Newsgroup: rec.radio.scanner

This seems to come up every year and I have yet to pay for
a catalog. I believe it is up to the store. I just got 2 today
at no charge by asking. I keep one at home and at work.

While I am not a great fan of Radio Shack's prices they
do have some parts that come in handy for projects that I
would otherwise have to mail order. They also have some
great prices on closeout items. I have gotten several things
that were not advertised on closeout simply by asking. A
few items that I can think of are a PRO-2066 for $97.00,
4 project cases (nice ones) for $0.99 each and Auto Hump
Mount for $0.99. I did not need to hump mount at the time
but it came in handy mounting my brother's Kenwood mobile
later.

Just my 2 cents.

listen to the sound on this URL:
http://home.wanadoo.nl/hbruch/radio/wacuit.html
it is in dutch-languages click on "ACARS-geluid" and you hear a sample of
ACARS sound. Also some logs (WACARS)

Hi
before you can get Wacars to decode anything, you must first load in the
data bases.
open Wacars, goto Options, database files and click on OK.
exit Wacars and start it again.
Try different sound settings in the sound menu. ie 44 or 32.
also in options click on error checking and set it to no checks.
A very good source of updated databases for Wacars is at
http://home.kabelfoon.nl/~pdw/alp/

regards
PP

There are a number of plans for similar devices out here that you
can build yourself.

A friend has a "jammer" that is built into a mini box with a short
duckie antenna. It is basically a sweep generator as I understand
it and only outputs a hundred milliwatts or so. This is just enough to
"jam" cell phone calls in about a 30 plus foot radius.

It's nice when we eat in a restaurant with them. He just whips it
out, and then no loud, obnoxious cell phone jerks can be heard
making "big business deals" during the entire meal.

I've let my scanner scan all those frequencies that were posted earlier for US ACARS. However, I have heard very few beeps & clicks but nothing is being decoded in WACARS. Are these channels busy usually & I'm just not hearing them?? Should I get a better antenna?

Thanks,

It takes a bit of finesse on the volume control. Make sure the squelch is
off and manipulate the volume control so that you don't see anything on the
sig meter until a burst comes through. You should see, at that point, if
you use wacars, a green bar that extends halfway through the window. If it
is a strong signal then it will be picked up on the ID window. Even if it
is not, it will be picked up in Raw Data.

Hi,
The old CPD 460 and 155 Mhz. system and infastructure are totally shut down. The different receiver / transmit sites (terminal tower,crystal towers,Baldwin,CMHA Wilson towers,CMHA W.98 Detroit,Metro Hosp.St Alexis Hosp.JFK HS,Gilmore tower,Schaff [torn down] West Tech) have been powered down,and are in the process of being disposed of. I have no info on the 300 Mhz rumor, I would not put any money on it.

A little help if you please. I'm looking for a current
list of Thunderbirds frequencies. They're in Souix City Sun and I
look forward to using my scanner. It looks like there are a lot of
lists on the internet, but I see a lot of discrepancies and old info
and undated information.

Below is a listing of what I have compiled, any links or known
differences to this would be appreciated.

There is no "smart" use for a jammer.
I hope the FCC nails anyone that uses one.
I'll be right there to report any jammer to them.

Gee, there's a lot of silly responses to this request. The Nevada double discone (bicone) will only have a slight advantage over the D-130 discone in gain but there probably within 2dB of each other. A properly designed discone has about an 8 to 1 frequency range. The D-130 I had was a real antenna from about 120 to 960mhz, with the whip resonating at about 50mhz. This is from mechanical and network analyzer measurements. The claims of 25 to 1300mhz is a dream, if not an outright lie. I have not measured a Nevada for frequency response but similar commercial bicone versions are only rated for about half the frequency range of a discone. The If the person asking is not in an RF congested city, a good wide band pre-amp at the D-130 discone will make a very noticeable difference in weak signal reception. Especially if the feed line is long and/or lossy. If the reception is centered around common public service frequencies there are several vertical gain antennas tuned for the public service bands which work noticeably better than a discone. Check Grove, Universal Radio, etc. for info on other antennas and pre-amps. Some gain type verticals are made by Antenna Specialists, Austin and others.

If you can't hear them, I'd guess that you can't pick them up. Just a wild guess, though. You might want to line your hat with tinfoil and see if that improves reception.

I had a cheap scanner once that did this (actually in my case it was around 440 to 445 MHz.)

Here's what's going on. Normally, the incoming signal is "mixed" with the local oscillator in your scanner to convert the signal to the scanner's i.f. frequency. A typical first i.f. frequency in a cheap scanner is 10.7 MHz. The local oscillator (LO) is tunable and can be either 10.7 MHz above or below the desired signal.

If it's a low side LO and you want to hear a signal at 445 MHz, the LO will be tuned to 434.3 MHz (445 - 10.7 = 434.3). Now the 2nd harmonic of that 434.3 LO is 868.6 MHz. If that is not filtered, and a cell signal is picked up by your antenna at 879.3 MHz, the 2nd harmonic of your LO (868.6 MHz) mixes with the 879.3 MHz cell signal to produce a 10.7 MHz signal that is processed by your scanners i.f. circuitry.

4454. AusComms Email List

Newsgroup: rec.radio.scanner
Date: 2001-09-08 13:28:52 UTC
From: AusComms <no_email@auscomms.list>
Message-ID: <s2pm7.3830$c5.30214@newsfeeds.bigpond.com>
Source record: 60271

What Is AusComms?

AusComms is an email list open for all persons involved or interested
in Radio Communications within Australia.
AusComms is not associated or affiliated with service, mag or group.
it is everyday people who wish to discuss communications related
issues via the medium of email.

Topics of discussion may be: (But not limited to)

- CB, Amateur, Scanning, Commercial
- Shortwave Listening, Marine & Aviation
- Special interest areas (Such as microwave communications)
- Project design & discussion
- Major incidents been received (Hijaking, Bomb Threats etc)
- Issues relating to radio communications (Band Allocations etc)
- Utility, Pirate, Clandestine & Numbers stations
- Frequency information
- Buy, Sell, Swap (At your own risk!)
- Personal reviews & info on communications equipment

To subscribe to the AusComms list:

TO: majordomo@qth.net
SUBJECT: (Leave this field blank)
BODY: subscribe radio

- Do not add any text to the subject line
- Do not use 'signature' footers
- Do not use 'html' or 'rich text' for subscribing and/or posting

Shortly after your initial subscribe email, you will be sent an
authourisation email, which contains a unique code.
You must follow the instructions in this email and reply to same
in order for your subscribe attempt to be completed.
This removes any possibility of others subscribing you to the list.

Please note if you were previously subscribed to this list whilst it
was used for Radiomag, your address details have been removed
from this lists database and moved over to the Yahoogroups list.
If you wish to participate on AusComms, you MUST re-subscribe.

List sponsored by Al Waller: www.qsl.net

I didn't say I did it, I said a friend of ours has such a contraption.
We simply reaped the benefits of it.

As for "important" calls, there are house phones and pay
phones in restaurants.

They work and work well. I use the both the KMA4113 and KMA Rover (kmaantennas.com). A log periodic is a series of dipoles each fed 180 degrees out of phase to the one next to it. Somewhere within the design range there will be a dipole or two that is close to resonance for the frequency you're interested in. These will resonate, while a couple elements behind will act something like reflectors and a couple in front will act something like directors. This "active zone" will travel along the antenna, depending on the frequency you're using. A wide coverage antenna like my KMA4113 (50-1300 MHz) will have about the same gain as a 3 or 4 element yagi. A log periodic that covers a very narrow frequency range (maybe 10 MHz) will have about as much gain as the same length yagi. (I've used one of these too.) One antenna with one feed line, and nothing to adjust, is the big advantage. If mounted for vertical polarization you will need to use a non-metallic mast..... or as in the case of my Rover, attach the mast at the rear of the antenna

n0jaa@aol.compost says...
> log periodic antenna
>
log-periodic (LP) antenna: A broadband, multi element, unidirectional, narrow-beam antenna that has impedance and radiation characteristics that are regularly repetitive as a logarithmic function of the excitation frequency. Note: The length and spacing of the elements of a log-periodic antenna increase logarithmically from one end to the other. Synonym log-periodic array.

periodic antenna: An antenna that has an approximately constant input impedance over a narrow range of frequencies. Note: An example of a periodic antenna is a dipole array antenna. Synonym resonant antenna.

4471. River Frequencies - WATERCOM ?

Newsgroup: rec.radio.scanner
Date: 2001-09-08 20:41:26 UTC
From: Mac <mckee@deltacomm.com>
Message-ID: <Wnvm7.63$7d.12228@newshog.newsread.com>
Source record: 60288

I need some help in developing a list of the 217-219 MHz voice frequencies used by the WATERCOM system on the Mississippi, Ohio, Illinois, and the Gulf Intercoastal Waterway. I'm a river-rat who does not live near the rivers, and such a list would improve my marine scanning when traveling in river country. The FCC database shows the 54 base stations in the system, but licenses them for any frequency in the band. So the FCC can't be used as a source of detailed data.

Each base station has a control channel that is on all the time and is therefore very easy to find using a scanner's search function. However, the voice channels are much harder to locate because they only come on when there is traffic. The system is full-duplex FM. The base stations operate in the 217-218 MHz band and clearly repeat the transmissions from the towboats. The boats transmit in the 219-220 Mhz band - exactly 2 Mhz higher than the corresponding base station. Each base station is connected into the telephone system at the station site, and the system provides fully-automated, high-quality communications between the boats and any land-line telephone. I believe that the system can also be used for data communications - probably on the same channels as used for voice?

If you live near these rivers and know of (or can search out) the WATERCOM frequencies in use in your area I would appreciate a reply. I will combine the frequency data that I receive with the FCC station location information and periodically post the results to the group.

Yes, it is possible. It's not an image. (Why do people assume every spurious response in a receiver is an image?)

It's caused by a wide open front end, and a first local oscillator synthesizer with a potent, unfiltered 2nd harmonic. See my post below for details.

Hmmm, of course, the front end of most receivers is a mixer, and the purpose of a mixer is to be non-linear.
So, even if the local oscillator output was a perfect, pure, unadulterated, sine wave, the mixer would immediately generate all the local oscillator harmonics. That is what it was designed to do.

It takes in two, or more, frequencies, and generates all possible sum and difference frequencies of all possible harmonics of the two (or more) frequencies. Even if the front end was very tightly closed, there is a limit as to how much you can attenuate a very strong, undesired, signal. And there is nothing to prevent the detection of a signal when

n x Flo (+/-) Fcell = Fif.

Walt

Actually, I believe that's happened before. I've heard of instances just
like that happening. I also remember watching the show "Cops" where a woman
complained to the police officer that there were so many drug dealers
around, and showed him some drugs that she bought. Since she was in
possession, she went to jail.

>It's illegal to use in the USA anyway.

This is true. FCC regulations make it illegal to maliciously interfere with licensed, ongoing communications. While the cell phone user is NOT licensed, the cell phone system operator IS.

4477. Houston Railroad Frequencies (Revised)

Newsgroup: rec.radio.scanner
Date: 2001-09-09 00:35:52 UTC
From: n0jaa@aol.compost
Message-ID: <20010908203552.22118.00000117@nso-fm.aol.com>
Source record: 60294

Last week, I posted a list of railroad frequencies for Houston, TX. I listed
the incorrect frequency for the BNSF Houston/Galveston Sub. Here is the list
again, with the corrected frequency (161.190 MHz).

Paul.

Subject: Houston Railroad Frequencies
From: n0jaa@aol.compost (Amateur Radio Station N0JAA)
Date: 03 Sep 2001 18:19:57 GMT

Here are some railroad frequencies for Houston, TX, for those who are
interested in railroad scanning.
All frequencies in MHz.

Legend: Railroad Name (reporting marks) -- division name if applicable
Legend: AAR channel # -- frequency -- subdivision/point name(s) if applicable

Paul.

Burlington Northern Santa Fe Railway Company (BNSF) -- Houston Division

30 -- 160.560 -- Baytown Sub
72 -- 161.190 -- Houston/Galveston Sub

Galveston Railway (GVSR)

39 -- 160.695
83 -- 161.355

Houston Belt & Terminal Railway (HBT)

28 -- 160.530
38 -- 160.680

Port Terminal Railway Association (PTRA)

40 -- 160.710
49 -- 160.845
64 -- 161.070
69 -- 161.145

Union Pacific Railroad (UP) -- Houston Division
Note: not all frequencies are used on all subdivisions at all times.

10 -- 160.260 -- Avoyelles Sub (Kansas City Southern)
14 -- 160.320 -- Lufkin Sub
17 -- 160.365 -- Beaumont Sub, Galveston Sub, Glidden Sub, Houston East Belt Sub, Strang Sub

20 -- 160.410 -- Angleton Sub, Baytown Sub, Brownsville Sub, Glidden Sub, Harlingen Sub, Kosmos Sub, Livonia Sub, Palestine Sub

24 -- 160.470 -- Alexandria Sub, Baytown Sub, Glidden Sub, Livonia Sub
27 -- 160.515 -- Anchorage Sub, Beaumont Sub, Lake Charles Sub, Livonia Sub
33 -- 160.605 -- Houston Mobile Phone Patch
37 -- 160.665 -- Coleto Creek Sub, Glidden Sub, Port Lavaca Sub, Terminal Sub
40 -- 160.710 -- Avondale Sub
42 -- 160.740 -- Settegast Yard
44 -- 160.770 -- Glidden Sub, Houston East Belt Sub, Houston West Belt Sub, Terminal Sub

51 -- 160.875 -- Lafayette Sub
54 -- 160.920 -- Avoyelles Sub (Illinois Central)
59 -- 160.995 -- Strang Sub, Terminal Sub
67 -- 161.115 -- Alexandria Sub, Anchorage Sub, Livonia Yard
72 -- 161.190 -- Glidden Sub
77 -- 161.265 -- Alexandria Sub, Livonia Sub
78 -- 161.280 -- Strang Yard
86 -- 161.400 -- Baytown Sub, Englewood Yard
89 -- 161.445 -- Beaumont Sub, Bryan Sub, Eureka Sub, Galveston Sub, Navasota Sub, Palestine Sub

90 -- 161.460 -- Henderson Sub, Palestine Sub
96 -- 161.550 -- Wharton Sub

Generating all possible N x M products is not what a good mixer is designed to do. A high quality double-balanced mixer will attenuate the higher order products. But remember, the mixer is only part of the front end.

I used the term "wide open" front end to mean there is no preselector filter in the front end of inexpensive scanners, not that the front end is physically wide open.

In scanners such as the Radio Shack PRO-2004/5/6, a series of preselector filters ahead of the mixer prevent out of band signals from reaching the mixer. The appropriate preselector filter is selected by the microprocessor as the LO is tuned.

Also, the first IF in those scanners is around 600 MHz and they are triple conversion.

Yes, mixers are nonlinear devices; but a good quality double-balanced mixer combined with a well designed frequency plan can minimize the ill effects of unwanted N x M products. Good practice usually dictates adding a low pass filter between the LO and the mixer.

Art Harris

In rec.radio.scanner on 05 Sep 2001 01:38:54 GMT,
n0jaa@aol.compost (Amateur Radio Station N0JAA) wrote:

>Do you remember when your local Radio Shack was staffed with a sales staff who
>were Amateur Radio Operators or who otherwise knew something about electronics?

Yep.

I was one of the hams (WA0PZI) on staff at the RS store in downtown Kansas City some decades back. Before that I was at Burstein-Applebee (about the time they imploded) and when I got back from Viet-Nam I worked for a while at Henshaw's (ditto).

B-A and H were Overtaken By Events, as RS has been and will be. The sad fact is that you cannot show a profit selling the parts and other items that the "electronics experimenter" will use at retail if you devote _any_ human attention to the sale. There are a number of reasons for this -- some of it related to the fact that you will find it almost impossible nowadays to locate an old-style Filling Station (petrol sales point) that still has a knowledgeable mechanic and a grease rack.

In an earlier era, sales of vacuum tubes and other consumables made up a large portion of the margin of any electronics sales operation, in the same way that TBA and tune-up labor furnished the lion's share of income for a gas station.

Technology marched on, and changed all of that forever. Gas stations now make their money from the convenience store operation -- doing oil changes and tune-ups on anything less than an assembly-line basis is an excellent way to go broke. Don't get me started on the small electronic appliance repair business landscape -- you can't make a living there if you are both small and honest.

Meanwhile, try translating the prices of the individual transistors, chokes, capacitors, resistors and other parts on offer then into today's dollars, and you will see that the cost structure is remarkably different. The price of the 2N107 and 2N170 transistors that I used to build my very first semiconductor project, reckoned in 2001 currency, was more than $20.00 each. At those prices, DESCO could afford to have a counter salesman on duty to handle sales of individual parts to a kid who rode across Denver on his bicycle to purchase these treasures. (And the Philipinization of US society had not gone so far back in 1961 that working the counter at DESCO was not an honorable job.)

> Nowadays you're lucky if you are helped by a sales person who knows what a
>resistor is!

But why would anybody who knows which end of the resistor is the cathode be willing to work for the hourly wage a RS store can offer? Would you? Especially if you could get five times that amount working in some other area?

Throwing rocks at the local Radio Shack store is a popular hobby in this froup and others such as rec.radio.shortwave, but if you sit down with _accurate_ figures and a spreadsheet for a while, you will conclude that it is only through heroic effort that your local RS provides you with any clue at all.

>Now, it seems that Radio Shack's main emphasis is cellular phones, with a
>sideline into TVs and stereos.

Those items have the margin to keep the doors open and the lights on and the employees paid. Individual parts, phenolic boards and other fiddly bits don't. Hiring people who know a lot about the subject in that environment is only possible during a profound general depression in which clerking at Radio Shack is the only job somebody with advanced electronic knowledge can get.

(Hmm... stay tuned, I might have to go see if RS needs any help.)

The scanner wands are probably already in place,from last year I
noticed the bar codes in the 2002 Radio Shack catalog. May be the bar
codes are for "in store" use by sales associates, so they can get
information or do direct ordering. From the net, for customers who do
not own a computer of have a scanner wand.
I'm glad the local store is around so radios will be available and
parts, theirs plenty of peg hooks and blister packs of hobby parts
in the stores. Who else has this selection and a 800 number and web site
to back them up.

What sort of freq do you want ?
How far out of band ?
Programming of this type of radio is done via a RIB (radio interface box)
box and PC with software. The radio is only designed to work within the
frequency range stated on the set.

PA-SitRep
Pennsylvania [Emergency] Situation Report E-Mail List

The PA-SitRep mailing list is a free communications tool that will enable you to monitor and report on major emergency situations throughout the State of Pennsylvania including weather emergencies, natural disasters, environmental disasters and civil disturbances.

The list is extremely low volume because messages to the list are limited only to those containing verified emergency situation reports of Major Import within the State of Pennsylvania.

The list is run from a private server at my expense, so there are no advertisements necessary or permitted. Rumors, hearsay, unconfirmed and or inaccurate reports and chat are strictly prohibited.

Subscribers do not have to be members of any specific emergency services organizations to join the PA-SitRep mailing list. ANYONE willing and able to comply with the posting guidelines is welcome.

The list protocol for posting messages is designed to cater to those who use digital cell phones or alphanumeric pagers for text messaging. The first paragraph of the messages posted to the list are brief summaries limited to 100 characters, followed by a more detailed situation report.

For more information, or if you'd like to subscribe, please visit the following web address:

http://www.pa-sitrep.com/pasitrep.htm

Thanks. And we'll look forward to your participation.

Mike, I'm shocked -- SHOCKED! -- that an antenna manufacturer would
stoop to misleading advertising. :-)

Okay, you are quite right about the gain figure but I believe that
letting yourself be nickel-and-dimed to death on gain or losses -- on
antennas or feedline or whatever -- *does* add up.

> I have
> not measured a Nevada for frequency response but similar commercial
> bicone versions are only rated for about half the frequency range of a
> discone.

Do you have figures/graphs/plots for these? Just interested, because
I'd like to see the formal results of a test on a bicone.

> The If the person asking is not in an RF congested city, a good
> wide band pre-amp at the D-130 discone will make a very noticeable
> difference in weak signal reception. Especially if the feed line is long
> and/or lossy.

That's good only if three conditions are true: 1) that the preamp is
mounted at the antenna end of the feedline, 2) that the preamp has
a lower noise figure than the ambient noise, and 3) that the preamp
is sufficiently immune to IMD. People put repeater towers in the
darndest (rural) places, too... I'm dealing with such an issue
right now in, of all places, a radio quiet zone!

> If the reception is centered around common public service

> http://www.universal-radio.com/

True, but off the resonant/design frequencies these will behave much
worse than a discone or bicone.

Eric

Hello!

In order to fix my unit, I am in need of the AOR AR-1000 schematics.
Please, if someone has them, let me know by direcet e-mail.

Thanks!

JOSE

Anyone in the NYC area know of any milcomms that can be heard? Also, if anyone is interested, I found some NYC ARTCC freqs that receive a reasonable amount of activity: 134.6, 133.475, 125.325. Any help would be appreciated.

FYI, if you dont have 780 software already they are offering
a free frequency logger if you get the software at www.bc780xlt.net
You can use a regular serial cable extension too so you dont have
to buy the cable there either.

If you go to http://www.batlabs.com/gp300.html, you will find the following info and more. It's a great site for Motorola info.

Out of Band Information

To program frequencies outside of the rated bandsplit in the GP300/P110/GP350 is very simple, follow the listed steps:

Hold the shift key down while entering the frequency you want
You must release the shift key when you enter the decimal point
You must fill the entire field-use zeros(while holding down shift)
When you are done hit enter like normal and the frequency you entered will appear in regular decimal like any other frequency.

So, my question now is, do you believe this person had a "Modified" Pro-2026
to be able to receive cell phone conversations on 462.950 or 472.260
frequencies ??

Or was this situation caused by IMD (inter-modulation distortion) ??

I'm trying to decipher if this person's scanner was modified or not....

Thanks,

Correct. A few years ago they went to a trunked, digital system. So even if you could follow the trunking (which you actually probably could with a trunk-following scanner), all you'd get as far as audio is digital hash (noise).

Drat.

Any antenna book should describe the LPDA. The ARRL Handbook and
the ARRL Antenna Book certainly do.

The LPDA is generally used when frequency agility is more important
than absolute maximum gain/directivity etc for a given size array.

The LPDA generally covers a broad range of frequencies, though
will have less gain on a particular frequency than a yagi of
similar size. Like a yagi, it is a directional antenna comprising
multiple elements. Unlike a yagi, all elements in a LPDA are
"driven" if you will. That is all elements are electrically
connected to the transmission line, not just parasitically excited.

Anyway, look in any antenna book.

You have some interesting viewpoints, and they are well taken. It is true that no one can make a living on selling piece parts anymore. I think you can thank the throw-away industry for that, at least in part.

I know of one way we can solve that: let's bring back vacuum-tube technology! :)

Seriously, though, our economy has affected the electronics industry quite a bit. Parts are not profitable anymore, and that hits us experimentors in the pocket book. Oh well, I guess we'll have to keep cannibalizing our old boat-anchors for the foreseeable future! At least we still have places like DigiKey and Mouser. Even if you DO have to buy in bulk.

Paul.

Good discrption Brian. One comment on the gain comment. You are right
but on uhf/VHF logs do give reasonable gain figures though certainly
lower than a single band antenna of similar size array. A great
broadband antenna if you have the room and are willing to use a
directional antenna.

Here's a possibility... I have a GRE Super Converter 8001. It converts
the 800 Mhz band down to 400 Mhz. 810 Mhz - 910 Mhz Input to 410 Mhz -
510 Mhz output. ANY scanner which receives the 400 Mhz band can receive
celular WITHOUT being modified! It runs off a 9 volt battery or AC
adapter. Comes with it's own antenna and plugs into the back of the
radio. I've had it about 12 years. Neat little toy but not for sale.
I would be surprised if they are still made.

Hi all,

Every so often I'll hear some DTMF (touch-tone) tones on aircraft frequencies, for instance 130.175. Are these used for phone patches, or possibly for some sort of remote operation at small airports? For example, at our small municipal airport, a pilot just clicks his mike three times on the airport's frequency to turn the landing lights on at night. I wonder if these DTMF tones have a similar function?

Tom

Not having seen it, or known what the environment he was scanning in
was like, I have to say "I don't know."

Mind you, if anyone really wants to set up a scanner for 800 MHz, it's
as easy as setting up your scanner for channel 3 or 4 and using a
cable-TV box or a VCR tuner to down-convert.

Frankly, I think the folks that make this stuff up are sticking their
heads in the sand if they think "blocking" the micro-processors of
scanners will keep a determined individual from monitoring cellular
telephone calls.

Heh. I was on the parts counter at the Brookside store in Kansas City when Jerry Burstein and his finance wizards decided that the margin on parts was too small (this was in 1966) and so they

o hiked the prices in the stores by five to fifty percent compared to the mail-order catalog; and
o removed all catalogs from the retail stores and replaced them with photo-copied versions ("counter books") in which (nearly all of) the prices had been whited out; you were required to find the part number in the counter book and then look up the new price in a separate loose-leaf binder.

A couple of days after this misbegotten bozocity was implemented, we had to call an ambulance for an elderly long-time customer who became so furious that he required medical attention. "You'd never get away with this if Applebee was still alive!" were his parting words.

(Of course, the white-out brigade inevitably missed a few of the prices, and any number of walk-in customers tried to insist on getting the price in the "counter book". Some of us just rang them up at the old price and kicked in the difference out of our own pockets.)

"Nice Jewish Girl From Brooklyn"

Woman's bail cut in half in dog case
Knoller no more risk than Noel, judge says

Jaxon Van Derbeken, Chronicle Staff Writer Saturday, September 1, 2001

San Francisco -- In a surprise move, a San Francisco judge cut bail in half
yesterday for a woman facing second-degree murder charges in the dog-mauling death
of her neighbor.

Superior Court Judge James Warren reduced Marjorie Knoller's bail to $1 million from
the $2 million originally set when she was jailed in March along with her husband,
Robert Noel.

Warren said that while Knoller may be facing more serious charges than Noel -- who
is still being held on $1 million bond on manslaughter charges -- she is no more of
a risk to jump bail.

The ruling followed a daylong, often heated hearing in which prosecutors argued that
the accused couple had strong ties to the "vile, vicious, murderous" Aryan
Brotherhood prison gang. Warren kept details of prosecutors' accusations secret to
avoid adding to pretrial publicity surrounding the case.

In arguing against cutting Knoller's bail, the prosecution also said that the couple are flight risks and that Knoller had done nothing to help Diane Whipple as she lay dying in her Pacific Heights apartment building after the dog attack.

The defense countered that the prosecution was "cruel" for suggesting that Knoller let Whipple die after the Jan. 26 attack by the Presa Canario dog that Noel and Knoller had been keeping.

The defense stressed that both defendants had an unblemished reputation and strong ties to the community. Far from letting Whipple die, they said, Knoller had acted heroically.

In the end, Warren acknowledged prosecution arguments about the risks involved but ordered the bail reduced based on his theory of equal flight risk.

Prosecutors had no comment on the ruling, citing Warren's gag order in the case. But a private attorney suing the couple for wrongful death was puzzled by the decision.

"It doesn't make sense. . . . I don't understand it," said Michael Cardoza, who along with his client, Sharon Smith, attended the first part of the hearing.

It is unclear whether Knoller can raise even the reduced bail sum.

"I hope so," said Knoller's attorney, Nedra Ruiz, who added that she disagreed with the judge and said that bail of $1 million is "unnecessary" because of no flight risk.

"She's stunned; she feels she deserves release on her own recognizance," Ruiz said about her client's reaction.

At the hearing, Ruiz described Knoller as a "nice Jewish girl from Brooklyn" with ties to the community and no criminal record.

"There's nothing in this evidence to show she was anything but brave in the face of a tragedy that would strike most people speechless, that might dement a person," Ruiz told Warren.

Later she said Knoller "put her body on (Whipple) to protect her from this crazed, damned dog."

Prosecutor James Hammer bristled at the suggestion that Knoller valiantly fought to protect Whipple's life.

"If Marjorie Knoller's such a hero, why didn't she give first aid to Diane Whipple while she was dying?" Hammer said. "If Marjorie Knoller's such a hero, why didn't she call 911? And if Marjorie Knoller's such a hero, why did she go on national television and blame Diane Whipple for her own death?"

When he again stressed Knoller's failure to help Whipple, Knoller shouted, "I did too, you son of a bitch!" That brought a threat from the judge to remove her from court.

Much of the testimony in the hearing concerned the alleged ties the accused may have to the Aryan Brotherhood, in part through a Pelican Bay State Prison inmate they adopted.

The judge appeared to agree with the prosecution that there was cause for concern, saying, "The court does find that Aryan Brotherhood is a danger, that people are in danger and that witnesses in this case are in danger. . . . The Aryan Brotherhood is potentially a resource of some value to the defense."

He also noted prosecutors' argument on the couple's alleged flight risk. Prosecutors pointed out that the couple drove at high speeds while being followed by police after testifying before a grand jury that would later indict them.

That was not enough, however, for Warren to order Knoller's bail kept at $2 million.

Yes, even Chicago is easy to listen to, in the clear. In fact, they share some of the OLD Cleveland 450-range frequencies.

Yeah, east and southeast Cleveland suburbs are real yawners (Solon for one). Brother lives in Rocky River on the West Side and he says due to MDT's, the River cops are rarely ever talking much over the air. So, aside from trunking and digital audio, it's also the MDT's that are taking away from the sport of scanning.

I would also take a look at the BC245exlt Quick Programmer at:
http://www.freqofnature.com/ . Despite it's name, it lists the PRO2052 as
among the radios it supports. Also try Scanner Master's package at:

http://www.scannermaster.com/products/software/winrs/index.php

and Scancat at : http://www.scancat.com

Trunkmax Pro also supports it, but the server is evidently down as I type
this. In any case, the URL is http://www.trunkmaxpro.com/

good luck and 73s Mike ka3jjz@erols.com

4555. Scan setting on an Icom IC-R2 ??

Newsgroup: rec.radio.scanner
Date: 2001-09-11 04:35:12 UTC
From: bucky mulligan <ohmwork@spots.ab.ca>
Message-ID: <3B9D9480.B7AABBE6@spots.ab.ca>
Source record: 60172

I need help programming my IC-R2 to scan between two frequencies. An example would be, say 50 mhz to 200 mhz. How do I set it up to scan continously between these two (or any other) frequencies? I have no problems with the regular band scan, but can not set it up for programmed band edges.
Any comments welcome..

mike II

4556. Bah. Air Nav is buggin' me.

Hi all,

Ok, I got myself a copy of AirNav 3.1. I also have the Air Nav ACARS decoder installed. I have the ACARS decoder set up to run inside Air Nav 3.1. Here is my problem. Say there is an aircraft (N46758 for example..) in the ACARS decoder box, and I want to track it on the map. HOW ON EARTH DO I DO IT!? =) The tutorials weren't helpful at all.

Thanks in advance.

John Y.

> Mike.

Thanks for the pointer. The sales brochure isn't much, but it is a
starting point...

...but what constitutes "fair price" in your mind? The Nevada sells
for $120 at RadioBooks. The AOR discone (claimed coverage: 25M-2G!)
sells for $129 at Grove. They also carry a Diamond for $100.
Universal sells the Diamond for $80, the AOR for $130 and an ICOM for
$150.

I guess what I'm saying is that they aren't exactly out of line, and
if they were poorly built I wouldn't use or recommend one. Since I
can't machine the "hub" myself, doing a "one-off" is out of the
question in terms of both time and money, so I can't complain too
much.

That said, it sure seems that ALL commercial hobbiest antennas are
overpriced, what with some wire SWL antennas selling for over $100!!

Eric

Source record: 60179

Assuming the serial cable is good...
Make sure you know which comm port your serial cable is plugged into. It's easier than it ought to be to confuse port 1 and 2
Check the comm port is enabled in your control panel (look at properties for comm port in the device manager/system control panel)
Set the software to communicate through the port the cable is plugged into
Check the speed for the comm port is the same in the software settings
Check the speed for the comm port is equal to the speed of the Opto (9600 baud usually, but it could be higher depending on the dip switches on the Opto board)

If you're running a DOS program and Windows ME, the comm ports might not work reliably (I had that problem, any way).

If all you have tried are demo programs, then you haven't tried the program that you actually ought to buy: Probe 6 (which is not available as a demo).

Somerset is located about 2 hrs. drive east across the PA turnpike from PGH
at exit 10. Somerset is a country community.

I believe the town nearest the crash is Stoystown which is about 20 miles
north east of the town of Somerset.

I hope this helps.

Btw- price reduced to $200 shipped. Man, you are tough! I am a non smoker. To me you can always tell if it came from a smokers envirement. But the buttons are the original color. The scanner inside and out doesn't wreak of smoke. The box and manual are free from discoloration and odor. As far as legality. Well, maybe so, maybe not. I will charge $200 across the board. Not to make you happy though. Lot's of stuff is illegal. I am sure you are a straight by the book person?? Never, ever broke a traffic law?? right.

Special Bulletin 9 ARLX009
From ARRL Headquarters
Newington CT September 11, 2001
To all radio amateurs

SB SPCL ARL ARLX009
ARLX009 FCC, federal agencies shut down after terrorist attacks

Along with most other federal agencies, the FCC has closed its offices and sent its employees home in the wake of apparent terrorist attacks this morning in New York City, Washington, DC, and elsewhere. The FCC has issued no emergency declaration nor other special instructions to the Amateur Radio community. The ARRL has advised amateurs to stay alert to instructions from local authorities. President George W. Bush has announced that the US military is on high alert in the US and abroad.

US air traffic was shut down after two airliners struck the twin towers of the 110-story World Trade Center in New York City this morning within a short time of each other. The building's towers partially collapsed in the wake of the collisions. An aircraft subsequently crashed into the Pentagon, and another aircraft crashed near Pittsburgh, reportedly after being hijacked. American Airlines and United Airlines both have acknowledged that they have lost planes this morning. More than 260 died in the crashes. Thousands were believed injured in New York City; there's no estimate on the number killed.

New York City-Long Island Section Emergency Coordinator Tom Carrubba, KA2D, said there has been no request for any Amateur Radio Emergency Service response at this time, although hams have been requested to assist the American Red Cross. New York City's emergency management offices are located in the World Trade Center. He said he was alerting all amateurs, especially ARES and Radio Amateur Civil Emergency Service personnel, to get prepared and to stand by. Carrubba said he's in the process of setting up a command channel on a linked repeater system that will cover the area from New York City into Long Island's Suffolk County. Kenneth Goetz, N2SQW, reports New York State RACES is operational on 3.993.5 and 7.248 MHz handling emergency and governmental-type traffic. He asked amateurs to avoid these frequencies.

In the Washington, DC, area, Virginia SEC Tom Gregory, N4NW, says Virginia ARES has been put on alert but has not yet been activated. ''I've asked everyone to monitor the emergency frequencies and to

keep a full tank of gas.'' He said the attack on Washington has resulted in a massive traffic jam as workers in DC attempt to leave the capital; cellular telephone communication was next-to-impossible. While no emergency nets are in operation yet, Gregory said all repeaters would be available as well as 7.243 MHz and 3.947 MHz on HF.

Virginia RACES reportedly has been activated at the state emergency operations center at Virginia State Police headquarters in Richmond as a precautionary measure.

The FCC's Riley Hollingsworth today suggested that the amateur community remain calm but ready. He invited amateurs monitoring any suspicious radio activity to contact him, and he will relay relevant information to the FCC duty team. He advised monitors to tape such radio traffic, if possible.

Should a state of war be declared, Amateur Radio would not automatically be shut down. This requirement was eliminated prior to the Gulf War.

Did it say a state of war has been declared? Try and read it again, it says "should a state of war be declared". If this act can be definitely connected with another government entity, there very well may be a state of war declared.

Yaawn, just replace your US eeprom or the whole board with a EU model.
remove a few resistors. that will make most of the SO called Un modded
scanners modded. it is just a EU model now. I know that Canadian Radio Shack
will get you the European board a rom with no questions. but it IS legal
here to listen to all that very boring stuff.

lol. So many people think they are all that talking ont heir cells and driving or doing other stupid shit while on them. There is no need to drive on a road and talk on a phone. I have seen to many accidents due to that. I hope that canada DOES allow it. if used wisely. it may save someones life when the loser is talking on the phone. I used to do it when I first got my phone. and DID notice a lack of concentration on drivin. and have asked others to do it. same response. SO I do hope the allow it for these friggin losers that think they are all that driving and talking. I rater see lives saved then not. Gee. just use almost any old cell. throw it in transmit on the losers frequency and BOOM. they are offthe cell cite. cheaper and more effective. then you aren't jamming everyone off.

any small fm transmitter will do that. Most Radio Shacks have it. for people
that have portable cd players and want to play it on their fm radio in the
hose or car.
all it is. is a headphone type male jack hooked up to a small transmitter.
transmitting on normal fm radio.

10-5 Repeat
10-6 Stand by
10-7 Verify address
10-10 Investigate
10-11 Holdup alarm
10-12 Holding suspect
10-13 Officer in danger
10-14 Check license (occupied vehicle) 10-15 Check license
(unoccupied vehicle)
10-16 Vehicle/plate stolen
10-17 Vehicle/plate not stolen
Past/In progress: Crime:
10-20/10-30 Robbery
10-21/10-31 Burglary
10-22/10-32 Larceny
10-23/10-33 Bomb threat
10-24/10-34 Assault
10-29/10-39 Other crime
Rapid Mobilization Codes:
(see also 10-70, 10-71, 10-77)
10-45 4 sergeants, 20 officers
10-46 1 lieutenant, 8 sergeants,
40 officers
10-47 Additional lieutenant,
8 sergeants, 40 officers
10-48 Unscheduled response as
directed by officer in
charge
Non Crime Incidents:
10-50 Disorderly person/group
10-51 Roving band
10-52 Dispute

10-53 Vehicle accident
10-54 EMS call
10-55 EMS call PD not needed
10-56 Verify EMS needed
10-57 EMS second call
10-58 Assist EMS
10-59 Fire
Administrative Codes:
10-61 Precinct assignment
10-62 Out of service - administrative
10-63 Out of service - meal
10-64 Entering licensed premise
Other Conditions:
10-65 Utility problem
10-66 Unusual incident
10-67 Traffic/parking condition
10-68 See complainant
Mobilization Codes:
10-70 Borough emergency
10-71 Citywide emergency
10-77 Implement local mobilization plan 10-69 Other non crime
incident
Assignment Status (interim):
10-80 Cancel
10-81 Transporting to stationhouse
10-82 Arrest possible
10-83 Report to be filed
10-84 Arrived at scene
10-85 Need additional units
10-86 Transporting female
10-87 Unit to hospital
10-89 Other interim status
Final Dispositions:
10-90 N Situation normal, false alarm
U Unable to gain entry
X Unfounded
Y Unnecessary
SO Gone on arrival
10-91 Condition corrected (non crime)
10-92 Action taken
C Referred to court10-93
Report prepared
10-94 Handled by previous tour
10-95 Referred to another agency
10-96 Summons served
10-97 Patient removed to hospital

Message-ID: <476b90ae.0109111726.3a468a01@posting.google.com>
Source record: 60132

These two freqs are where most of the action is happening.

Does anyone know what the "correct" PL tones are for the following two freqs.

CW-1 @ 470.6875
SOD @ 470.8375

I have found over sixteen diffent PL codes listed as the correct codes.
Some websites list the TX PL codes and some sites list the RX PL Code, none I have found to be correct.

No, it is not a prelude to Martial Law
I am in New York, no curfew has been announced as far as I know.
With most of NYPD in lower Manhattan, it would be totally
unenforceable anyway.
The National Guard is here to aid in the search and rescue operation
(and probably in the recovery of more than 10,000 bodies)

After having been ripped off on ebay I am still looking for a used scanner that works here in upstate n.y. I'm really confused with all the changes that have taken place but I think I need one that tracks motorola and erikkson trunking scanners.I sent money for one that said"no gaps" 800 mghz and never heard from the seller again.I am recently on disability for a severe spinal injury and certainly have the time to enjoy a scanner but can only afford a used one.Thanks for listening and God Bless.

1. There is no martial law declared in NYC,
2, There is no martial law declared here on SoCal,
3. The National Guard is there to help, at the state's request,
4. You will see a rash of "false prophets" broadcasting their BS.

We will live through this catastrophy and come out even stronger. However, I can't believe that this episode will not somehow erode another small part of our freedom. Unfortunately, this is the crazy world we live in.

Hey, we don't need any of that. First, we don't know who did this. Second, a majority of the Muslim/Arab people are good people. Don't tar all with the actions of a fanatical few. In our quest for justice, we shouldn't sink to vigilantism. We will find those responsible, and we will make them pay. This is a country of justice and law.

Looks as though a new Bully is on the block now doesn't it. The USA is finally getting a little payback for stirring up shit all these years in the name of democracy.. Maybe this is just the beginning.. President Bush is so unqualified as president of the free world, I can easily see the empire crumble.

I bet ol' slick willy is sittin back, cigar in hand, blowjob in progress, thinking, damn I'm glad this shit won't fall on MY lap.. lol..

The USA finally gets a taste of its own unique brand of justice.. besides the trade centers were ugly buildings.. I wished the statue of liberty would have been destroyed, being your symbol of freedom and democracy.. that would have made the day!

I have used various ones. if you aren't wanting to savethe frequencies detected and you are watching your counter. RS oneworks good. I have used the opt...onics I forget how to spell it. and I have used other ones too, plus the rad shack one. don't see very much difference.except some save frequencies. I owned a opt one and still ahve my rad shack one hooked up to a preamp on my 2meter 5/8 and works good. even without the preamp. I get sometimes a few hundred feet away from a transmission.

There's plenty of people of Middle Eastern descent who love America for the same reasons as those of us who were born here. These are decent, hard-working people who have come here for the same reasons our ancestors did. These folks have no more to do with today's tragedys than we do. I'm sure they are just as shocked and outraged.

Let's learn from history and realize that painting people with a broad brush is a very bad thing to do. I hope we hunt down and fry the people responsible for the mess today.

Please don't take it out on innocent people.

Yawn is right. Only an idiot would do what you propose since it would be simpler and cheaper to buy a cell-capable scanner from a European dealer. I wouldn't bother buying it from Canada. The prices are jacked up and dealers are quite content to screw you on the shipping.

Gotta warn you, though...the Radio Shack device that does this is terrible. They discounted it to me because the one they had was opened from a previous return. Well, I returned it as well. Who knows how many times that thing had been returned. They couldn't give it away. The main problem was that the two frequencies it offers for local transmission were BOTH used (or interefered with) by local radio stations (central NJ area). You also have to place it near your radio antenna, which for me was in the back of my station wagon, and it STILL worked very poorly and the sound quality was FAR worse than typical FM stereo quality, even coming out of a portable CD player. My advice would be to try to find a different product.

Agreed. Although everyone suspects that Bin Laden is behind it, and probably so, we don't know for sure. And even if they are, there's no need to lump all Muslims in with a select few nutcases. It's no different than the neo-nazi groups here in the US. I'm sure that everyone wouldn't want to be lumped in with them. Not all Muslims want to be identified with a few fanatics.

The SoundFeeder allows you to select any frequency in the FM broadcast band. I normally choose either the very upper or very lower limit of the band. It has a fairly good range, strong enough signal to use in a vehicle. Unfortunately I try to use mine while listening to the scanner in a different room in the house. I added a few jumper wires with alligator clips in series to the short 3" whip antenna, and the range improved quite a bit. I've been meaning to replace the whip with a cordless phone whip, but so far haven't gotten around to it.

This has been forwarded, with headers, to the FBI.
Hopefully they will take you seriously, track you down, and deal with
you as an enemy of our country.

I was just using RS as a example. most places will carry something like that. even a small $10 buck curcuit will get over 100 feet. works on all of fm too. I remember building one a while back. was fun.

never had the problem where I buy my stuff in canada. I am in canada too. shipping is less then 3 bucks usually and the radios are cheaper too. all depends what radio store you buy from. the last time I checked on a price for a euro board was fairly cheap. 30 bucks for one on my radios canadian. about 18 US. so all I can say to you is Yawn. I don't see a point for me to buy a european model when after all the shipping and currency conversion. it would be more for me to get a euro model then a canadian model in canada. You must of been buying from the wrong radio company if you payed a fortune for one.

Only channel 2 is on from Empire State Bldg. Channel 7 (ABC) is using
channel 68's transmitter.

Truth is,

Consumer protection laws do NOT apply to private transactions.

If you decide to make it easier for everyone by using PayPal, and PayPal is going to charge you a fee for their services, you are certainly entitled to pass that expense along, or even charge $100 more if you feel like it.

BTW, why are you selling?

Thanks,

Jeff Singer

I was looking at some antennas at radio shack the other day and saw their discone thing. Looks like it'd pick up a bit more than what I get with the standard one on my bc780xlt.

I've got a question - do they have to be mounted outdoors? Or could I set one up in the attic? It would certainly be a lot easier, and I'd only have to drill 1 hole to put the cable though.

How much less reception would I get? Any ideas?

That law only applies to monitoring of cellular and cordless phone transmissions. There is no prohibition against recording and propogating what is heard on the civil aviation band.

If there were, don't you think all of those Real Audio or other streaming audio broadcasts airing traffic at various airports would have been ordered to C&D (cease & desist) a long time ago?

Well, I don't know how many of you actually have cassette decks in the
dashboard of your vehicles, but for those of you who do still have
one, this is what has always worked great for me.

Just go out and get one of those standard CD-to-cassette adapters many
stores sell. These are the cassettes with a wire running from it to
the headphone output of a portable CD player. Just throw the cassette
part into your deck and hook the other end up to the headphone jack of
your scanner.

You'll now have a simple way of listening to your scanner with your
car's audio system. No need to worry about any of those FM modulator
issues (like interference from licensed stations, etc.).

From: ISLD_trader <isld_trader@this.ng>
Message-ID: <120920011910037885%isld_trader@this.ng>
Source record: 59960

I have had the second generation RS discone 20-043 for a long time here north of SF mounted outside about 50 ft. up in the clear on a hill with a clear view of SF and the Bay Area and it is my worst performing antenna. If you are thinking about getting a lot of signal out of a very small and cheap antenna I highly recommend the RS 20-176A. It is about $20.00 and about 20" high and it greatly outperforms the RS discone IMO. I have the 20-176A hooked up to my BC 780XLT and it works extremely well. I actually bought 2 more as back-up units for the future since they are so cheap. Make sure you get good coax, especially for a long run. Actually, I am using RS quad-shield RG-6 and the results are very good. I would not recommend an attic installation for this antenna. You should be able to find a place outside for it since it is very small and most people will not even notice it.

Good luck.

You ever think that it was the person on the other end that heard the call.
I mean, they would tell everyone that people from inside would make the
calls if they could.

Think about it. It probably wasn't a scanner user hearing these and
mentioning it to they media.

It won't be long and his full name, address et cetera will appear here.
He won't be the first that it happens to. But one of the most deserving.

In all my travels in Canada, I never met anyone even slightly as unpleasant (to
put it nicely).
Just a lot of genuinely friendly and kind people, minding their own business
and helping others out when they need it. Guess there's one in every crowd.

> Bullitin", unless it is reality.

Probably because several of our leading congressmen and Senators already
brought the subject up (In interviews on TV).
They called the attacks "Acts of War" and said that "should" we be able to
trace the actions to a specific country there is that possibility. (Or to a
country giving safe haven to those behind the attacks)

The President even made the statement that the US (NATO has agreed to treat it as an attack on all NATO nations) that any nation harbouring the individual or group responsible would be treated the same as that individual or group.

>

So there is a sound basis for including that in the bulletin.

My wife works for Paypal here for 2 years. Paypal could care less.
Selling the 2005 only because I have a 2006 and got a 780xlt. One has to
go as I don't need 3 of these. Perfect condition though.

I bought one of those, but the cassette deck in my pickup kept
auto-reversing for some reason. So I took it back to Walmart and bought the
SoundFeeder. At least I can use the Soundfeeder at home as well as mobile.

Actually, the Communications Act of 1934 prohibits revealing communications you overhear to another person. The only services it doesn't apply to is broadcast, amateur, and CB radio transmissions. But as far as I know nobody has ever been prosecuted for telling someone else what they heard on their scanner. Of course, there was the highly-publicized Newt Gingrich cell phone conversation that was recorded by those two nitwits in Florida, but I believe they were charged with wiretapping charges instead of under the Communications Act.

That information could have come from the 911 center or emergency workers.
Or perhaps that info was given out over the police radio and overheard on a
scanner.

A funny thing happened this morning... I receive an email containing a copy of a news story... It has the complete opossite view of this ass... Check it out... I can agree with a lot of it, and it reflects the feeling one Canadian, who truely is on the side of the US...

America: The Good Neighbor.

Widespread but only partial news coverage was given recently to a remarkable editorial broadcast from Toronto by Gordon Sinclair, a Canadian television commentator. What follows is the full text of his Trenchant remarks as printed in the Congressional Record:

This Canadian thinks it is time to speak up for the Americans as the most generous and possibly the least appreciated people on all the earth.

Germany, Japan and, to a lesser extent, Britain and Italy were lifted out of the debris of war by the Americans who poured in billions of dollars and forgave other billions in debts. None of these countries is today paying even the interest on its remaining debts to the United States.

When France was in danger of collapsing in 1956, it was the Americans who propped it up, and their reward was to be insulted and swindled on the streets of Paris. I was there. I saw it.

When earthquakes hit distant cities, it is the United States that hurries in to help. This spring, 59 American communities were flattened by tornadoes. Nobody helped.

The Marshall Plan and the Truman Policy pumped billions of dollars into discouraged countries. Now newspapers in those countries are writing about the decadent, warmongering Americans.

I'd like to see just one of those countries that is gloating over the erosion of the United States dollar build its own airplane. Does any other country in the world have a plane to equal the Boeing Jumbo Jet, the Lockheed Tri-Star, or the Douglas DC10?

If so, why don't they fly them? Why do all the International lines except Russia fly American Planes? You talk about Japanese technocracy, and you get radios. You talk about German technocracy, and you get automobiles. You talk about American technocracy, and you find men on the moon - not once, but several times - and safely home again.

You talk about scandals, and the Americans put theirs right in the store window for everybody to look at. Even their draft-dodgers are not pursued and hounded. They are here on our streets, and most of them, unless they are breaking Canadian laws, are getting American dollars from ma and pa at home to spend here.

When the railways of France, Germany and India were breaking down through age, it was the Americans who rebuilt them. When the Pennsylvania Railroad and the New York Central went broke, nobody Loaned them an old caboose. Both are still broke.

I can name you 5000 times when the Americans raced to the help of other people in trouble. Can you name me even one time when someone else raced to the Americans in trouble? I don't think there was outside help even during the San Francisco earthquake.

Our neighbors have faced it alone, and I'm one Canadian who is damned tired of hearing them get kicked around. They will come out of this thing with their flag high. And when they do, they are entitled to thumb their nose at the lands that are gloating over their present troubles. I hope Canada is not one of those."

Stand proud, America!
Wear it proudly!!

Where someone is from has nothing to do with their posts being obnoxious.

Jim is just a troll, saying the most outrageous things he can think of,
possibly because that's the best way he knows to attract attention to himself.

If you happen to find a message he's posted that you're certain violates the
TOS for his ISP, by all means report him.

But otherwise, if we all ignore him, he'll eventually get bored and try to find
someone else to annoy.

I have been listening to the NY Scanner, that is re-broadcast online, for about 2 hours, and there have been about 15 bomb threats called in, in that time. Empire State Building, 110 Plaza, Maces (Spelling?), Grand Central Station, Time Square, you name it, and it's on there.... I'd have to say that a lot of the Citizens of the US are about as sick as the terrorists! What a nightmare! I can't believe how sick these people are! They need all the help and cooperation they can get in this terrible tragedy over there in NY, and these people pull bull-shit like this... They have the officers and everyone else running there asses off dealing with all this shit, when they should be helping out at the disaster site... I am EXTREMELY disappointed in my fellow Americans! What a disgustingly sick world we live in... I have no words... It's is just sick beyond anything imaginable... How could ANYBODY be so despicable! I am just sickened...

vvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvv
Please forgive the off-subject but we need more eyes
and ears out there than we ever did before.

Please consider joining the list and helping out.
^^

PA-SitRep
Pennsylvania [Emergency] Situation Report E-Mail List

The PA-SitRep mailing list is a free communications
tool that will enable you to monitor and report on
major emergency situations throughout the State of
Pennsylvania including weather emergencies,
natural disasters, environmental disasters, civil
disturbances and threats of terrorism.

The list is extremely low volume because messages to
the list are limited only to those containing verified
emergency situation reports of Major Import within the
State of Pennsylvania.

The list is run from a private server at my expense, so
there are no advertisements necessary or permitted.
Rumors, hearsay, unconfirmed and or inaccurate
reports and chat are strictly prohibited.

Subscribers do not have to be members of any
specific emergency services organizations to join
the PA-SitRep mailing list. ANYONE willing and
able to comply with the posting guidelines is
welcome.

The list protocol for posting messages is designed
to cater to those who use digital cell phones or
alphanumeric pagers for text messaging. The first
paragraph of the messages posted to the list are
brief summaries limited to 100 characters, followed
by a more detailed situation report.

For more information, or if you'd like to subscribe,
please visit the following web address:

http://www.pa-sitrep.com/pasitrep.htm

Thanks. And we'll look forward to your participation.

Look pal, if you have a problem don't try and push it off on me... Everything that was posted was said by one of your FELLOW CANADIANS... You have a problem with the words in it, you had better look to your own country.... I said that I agreed with MOST, didn't say all.... And I never said that the US is perfect... It is FAR from it... But then again, I would say your Country isn't so great either... Reflecting back on the previous post... Has _YOUR_ _COUNTRY_ _EVER_ helped out the US in a time of need?? What is _YOUR_ _COUNTRY_ doing to help out the US right now? Yea, that's what I though...

My post of your ISP information was not an indication of a violation of your TOS.. Nowhere did I indicate, imply, or say that... It was meant to show you that even though you are posting anonymously, you can still be found... It was done as proof to your location, i.e. Canada. It was also done to show that even though you feel so shitty towards the American people, you seem not to have a problem with using an ISP based right here in the US... How interesting... As someone else put it, your nothing but a hypocrite, and , in my own words, an ignorant bastard...

FW: U.S. Pride Day!

Subject: FW: U.S. Pride Day!

Tomorrow is U.S. Pride Day. Everyone wear U.S. colors. Try to be wearing as much red white and blue as you can. Send this message to as many other people as you know. Let's get the whole country into it. At least send it to 10 other people.

They are asking people to drive with their headlights ON in a show of solidarity and in remembrance of those who lost their lives ..... please pass the word along.

thanks to all....

I am not "hobnobbing." You ASKED a question ("Hasn't the court ruled...?"). I simply responded with the correct answer. If you have other issues with the seller and have nothing better to do than try to offend folks like me who you've never had any dealings with, perhaps you need to do a little more homework yourself.

Jeff

In article <2591qt888bd4koqotgf53i0e3s8r31vpmq@4ax.com>, 1@2.com says...

The solution to Osama Bin Laden is to seek that cowardly bastard out and kill him and anyone and I mean anyone that has anything to do with him and his fucked up beliefs! That includes any country that would harbor that maniac. He should not live another day free after this shit he has pulled. We need not to hesitate to go over there and take care of business and thats a fact. And anyone here in the United States that thinks we should let by gones be by gones needs to get the fuck out!!

Great Britain will still be paying the American government Lend-Lease
payments until the year 2006. Source: The Ministry of Defence

Great Britain paid dearly, with an entire Empire that had lasted
several hundred years, and then The United States picked right up
where they left off.

> None of these countries is today paying
>even the interest on its remaining debts to the United States.

See above.
>
> When France was in danger of collapsing in 1956, it was the Americans who

>tornadoes. Nobody helped.

Medecin Sans Frontier, Canadians should know what that means.

The INTERNATIONAL Red Cross

and as to no help being sent, rescue workers are regularly told that
the USA needs no help. They are the self-styled leaders of the free
world, they are the last superpower, they rip up international
treaties if they dont fit, they station troops on allies soil in
occupation. They listen in on our phone calls and electronic documents
and place defence missile systems on thier soil only for the
protection of the USA, making targets out of their allies, and STILL
we stand united with America in it's time of need, it is right and
just to do so, an outrage has been committed, and we are with you
America.

Bad Aibling (moving to Hungary after massive German protest)
Menwith Hill
Chicksands (yes there are still Americans there)
>
> The Marshall Plan and the Truman Policy pumped billions of dollars into
>discouraged countries. Now newspapers in those countries are writing about
>the decadent, warmongering Americans.

The Marshall Plan and Truman Doctrine, were direct results of an
Anti-Communist fear, also, Britain and France propped up West Germany
as well.

>

>erosion of the United States dollar build its own airplane. Does any other
>country in the world have a plane to equal the Boeing Jumbo Jet, the
>Lockheed Tri-Star, or the Douglas DC10?

Yes, it is called Airbus, I believe the Fokker company also still
builds planes as does British Aerospace. Britain also developed the
Harrier Jump Jet, the mainstay of the U.S. Marine's air support, Idont
know the details of the deal with McDonnel Douglas, but I think it was
in their favour.

>

Hi
I have a discone in my attic and find it works BETTER than outside.
It picks up far less static
V

Coward? for speaking my mind. Thank you. I am Just this Guy, and if
you had any idea of how to use the internet, as the NSA obviously
does, that's the NATIONAL SECURITY AGENCY of the United States of
America, you would know that ALL email and newsgroup traffic is logged
for triggerwords. As I have now mentioned THE NSA, and three of their
covert listening stations, another one being the CIA base in ALICE
SPRINGS AUSTRALIA I know that their computers have logged this message
in FORT MEADE MARYLAND, and they have also logged your response.

Here's some more for them:

KH-1
TSR
LOCKHEED
RATHEYON
PENTAGON

It WAS supposed to be common sense, but well, Fuck it. My phone s
already tapped by the USA and in the event of nuclear war my house is
in the blast radius of FOURTEEN AMERICAN AIRBASES. I live in Britain,
and no, I don't think much of my own government, but when our Prime
Minister (who I didn't vote for) says we stand shoulder to shoulder
with America I BELIEVE HE IS RIGHT, and at 11 o'clock GMT tomorrow
morning iI will be observing the three minute silence requested by the
very much maligned European Union. We still stand by America, but it
does not mean we like everything the administration does, and the
hearts of British people go out to those bereaved.

Stand firm, we are with you.

ANON.

But not before they used the "Buy it now" option ebay has, to directly sell the item at the going price without waiting for the auction to end. So in other words, they got to close the deal before the auction was yanked.

> These damn fuckers

The trick is to get it up as high as possible, with as short a run of coax as possible. Whether on a tall tower or in your attic, it will work fine. There are a lot of scanner listeners with antennas mounted in attics. The only downside I can think of would be any close proximity to electical wires, but electrical noise won't affect VHF/UHF that much anyway. On the plus side, you won't have to worry about what the weather might be doing to your antenna.

HEY JIMMY BOY,

If Canada is so perfect, why did they exile the Acadians in 1755 and
still
refuse to give an apoligy? Louis Real was murdered by a vengeful court
system
because he was metis. For property stolen when the "Derangement
Acadien"
you should look back at Canadian History. Talk about "Thieves"!!! WE
WANT
our ancestors lands in New Brunswick and Nova Scotia returned post
haste!!!

you are a troll and frankly if Canada had a position for national
village
idiot, you'd be the poster boy!!

BTW-are you happy about the events in NYC and Washington, D.C.? sounds
like you wish you could join the bash America League.

As a Canadian-American, I am ashamed of jerk like you.

Martin

More liberal pacifists crap. It's pacifists like you and Clinton that have created the situations that allow things like this to happen. The people who did this are fanatics, they do not understand diplomacy, they only understand violence and must be dealt with accordingly.

He made some shitty comments, and no nation has a perfect history, but
I think the "Native Americans" have got a better case for ancestral
lands. Now is probably not a good time, but this is still free speech.
What is their response to all this, does anyone know?

You contradict yourself big time by acknowledging you are being
monitored. You have NO credibility with anyone here when you hide
behind a fake ID and trash Sinclair's statement (which, by the way,
was actually originally written in the early 70's) and since "they"
already know who you are, why bother with the fake ID? The only
person you are fooling is yourself.

If a person is reading in this newsgroup, excuse my ignorance, they are either scanner or ham radio enthusiasts. . . RIGHT? Stating that ham's are old folks just chatting or that these radios are now somehow obsolete seems a bit ignorant to me. Tell the Armed Forces that conventional radio is no longer needed and I guarantee several pilots will say otherwise!

The one who nobody is fooling is me.
The main reason I use an anonymous ID is so that reactionary people
who have little or no grasp of geopolitic know who am, such as
yourself.

I also do not run around with my ID card -printed on my t-shirt.

1. Because we don't have ID's
2.. I don't want every lunatic opposed to my views attacking me (do
you see a parallel with current events?)
3. I can't stop the NSA from monitoring me, but I can stop idiots from
filling my email inbox with hate mail. (do you get it yet?)

This discussion is now over.

A lot of this is suspicious packages and suspicious activity
Law Enforcement is being VERY careful, and there is a lot of paranoia
out there right now.
This is not necessarily the work of sick people, just a bad
circumstance.

Yup. And while we are at it let's kill North Korean Commies, Vietnamese
Gooks, Rwanda Cannibals, Colombia Narco Lords, Peruvian Trotskists,
Olster Separatists and Chechen Terrorists..

Oh..Wait.. We already tried that.. Should be all done and kosher by now??

Also,

alot of it is dogs mistakenly barking. The empire state building and, just now, the capitol, were erroneous dog alerts.

I've seen this several times in the last couple of days.
It was originally broadcast on 5 June 1973. Mr. Sinclair
himself died in 1984.

It's interesting, and I always respected Mr. Sinclair,
but I wish people would stop pretending it's current.
It isn't.

Whats's a bog word?

Did you read my posts? or were you too busy being arrogant?

Even if you hate the rest of the world for daring to ever criticise
suicidal American foreign policy, we will still support you.

Even if you resort to name-calling, we will still support you.

Even if you come from Dicksville Nebraska and have never been out of
your country, and have no idea about anthing at all, we will still
support you

Even if your nation has been sanctioning terrorist support groups
(NORAID), we will still support you.

Even if you continue to station your unwanted troops on our soil,
we will still support you.

Even if you commission a lunatic non-working counterproductive missile
system on our territory making our civilians your terrorist targets,
we will still support you.

Even if you post racist stereotypical dogma on your internet groups,
we will still support you.

We'll invoke article 5 of the NATO charter in your honour

We will play the American national anthem outside our seat of monarchy

We will have every flag in Britain at half-mast, as a sign of respect
to you.

We will cancel our sporting events as a sign of respect

We will honour athree minute silence to honour the dead in New York
and Washington

We will mourn the 100-500 British who died with their American
colleagues in the WTC.

And what will you do?

Probably not even comprehend one single word of any of this at all,
and see it as some kind of attack.

We will still love you. :-)

the solution to our Osama bin Laden problem is to eradicate him from the
face of the earth

It is quite likely that the discone is providing TOO MUCH signal to
the BC780. Picking up all the SF TV and FM stations that it sees
"line of sight", and sending hugh, overloading signals to the radio
set. Most modern scanners are designed to work with the tiny "rubber
duck" or "back of the set" antennas, and are quickly overloaded when
connected to a high, outdoor antenna.

What happens if you mount the RS 20-176A up on the hill where the
discone is? I would suggest that in those conditions the RS 20-176A
will also overload the BC780 and give poor performance.

Walt

Most likely I believe the US would sieze control
of Afghanistan.

Then Helen and Bob could take thier time to
use diplomacy and reason with any remaining terrorists.

I consider the message a virus, because it's popping up everywhere.
I certainly am curious about how it was introduced at this time.

They played the original broadcast today here in Montreal, on
CJAD. Gord Sinclair (jr), who is no longer so junior, is the
news director there. Apparently he was getting something like
"20 emails an hour" about the old editorial. It's not clear
whether people had old memories, or if the email was the
effect of the message showing up on the internet. I had just
finished posting a response about this to one newsgroup this
afternoon, when they announced on CJAD that they'd be playing
the editorial. Perhaps they've got it up on the website,
http://www.cjad.com

I did a search on deja/google to see how widespread the
"virus" is (it had hit a lot of the newsgroups I read
regularly) and it is pretty widespread. According to
one message in an email abuse newsgroup, the editorial
has actually been "adjusted" this time around. I haven't
bothered checking to see if there is some change from
the original.

I just went to yahoo and entered "Gordon Sinclair" and
I see there's now a news story about the message making
it's rounds on the internet. Somehow, I expect to see
that same story in the paper tomorrow morning.

This is an excerpt from an excellent article in The Miami Herald
today...

We'll go forward from this moment. It's my job to have
something to say. They pay me to provide words that help make sense of
that which troubles the American soul. But in this moment of airless
shock when hot tears sting disbelieving eyes, the only thing I can find
to say, the only words that seem to fit, must be addressed to the
unknown author of this suffering.

You monster. You beast. You unspeakable ########.

What lesson did you hope to teach us by your coward's
attack on our World Trade Center, our Pentagon, us? What was it you
hoped we would learn? Whatever it was, please know that you failed. Did
you want us to respect your cause? You just damned your cause. Did you
want to make us fear? You just steeled our resolve. Did you want to tear
us apart? You just brought us together.
Let me tell you about my people. We are a vast and
quarrelsome family, a family rent by racial, social, political and class
division, but a family nonetheless. We're frivolous, yes, capable of
expending tremendous emotional energy on pop cultural minutiae -- a
singer's revealing dress, a ball team's misfortune, a cartoon mouse.
We're wealthy, too, spoiled by the ready availability of trinkets and
material goods, and maybe because of that, we walk through life with a
certain sense of blithe entitlement. We are fundamentally decent, though
-- peace-loving and compassionate. We struggle to know the right thing
and to do it. And we are, the overwhelming majority of us, people of
faith, believers in a just and loving God.

Some people -- you, perhaps -- think that any or all of
this makes us weak. You're mistaken. We are not weak. Indeed, we are
strong in ways that cannot be measured by arsenals.

IN PAIN

Yes, we're in pain now. We are in mourning and we are in
shock. We're still grappling with the unreality of the awful thing you
did, still working to make ourselves understand that this isn't a
special effect from some Hollywood blockbuster, isn't the plot
development from a Tom Clancy novel. Both in terms of the awful scope of
their ambition and the probable final death toll, your attacks are
likely to go down as the worst acts of terrorism in the history of the
United States and, probably, the history of the world. You've
bloodied us as we have never been bloodied before. But there's a gulf of

difference between making us bloody and making us fall. This is the lesson Japan was taught to its bitter sorrow the last time anyone hit us this hard, the last time anyone brought us such abrupt and monumental pain. When roused, we are righteous in our outrage, terrible in our force. When provoked by this level of barbarism, we will bear any suffering, pay any cost, go to any length, in the pursuit of justice. I tell you this without fear of contradiction. I know my people, as you, I think, do not. What I know reassures me. It also causes me to tremble with dread of the future. In the days to come, there will be recrimination and accusation, fingers pointing to determine whose failure allowed this to happen and what can be done to prevent it from happening again. There will be heightened security, misguided talk of revoking basic freedoms. We'll go forward from this moment sobered, chastened, sad. But determined, too. Unimaginably determined.

THE STEEL IN US

You see, the steel in us is not always readily apparent. That aspect of our character is seldom understood by people who don't know us well. On this day, the family's bickering is put on hold. As Americans we will weep, as Americans we will mourn, and as Americans, we will rise in defense of all that we cherish.
So I ask again: What was it you hoped to teach us? It occurs to me that maybe you just wanted us to know the depths of your hatred. If that's the case, consider the message received. And take this message in exchange:

You don't know my people. You don't know what we're capable of. You don't know what you just started.

But you're about to learn.

Bomb them into the stone ages. I must say at the risk of someone calling me a nazi or a jew calling me an anti -semite(sp?)This entire issue revolves around the fact that we support Israel as they import people from around the world and force Palestinians out of their homes.I think if someone forced me off my land and treated me the way the Israelis treat them I would rebel.Don't think I am justifying terrorism,just another angle of thought.

Happy to illustrate, you see, at age 9 my mother died and I was sent off
by my dad from Memphis, TN to Ontario, Canada to live with my Aunt and
Uncle
and they kept me for many years. Little did I know that I had been
adopted
by them to make the border crossing and paperwork issues easier to
handle.
I found out only several years ago about this and how it conferred

Canadian Citizenship. I am a dual citizen so I am sensitive to the issues of both nations, sadly, I am disappointed by those persons in the States who do not know Canadians and Canada very well. I am also saddened
by those Canadians who think all there is to the USA is Hollywood, Big Cars and Red Necks.

Red Green and Possum Lodge is really not that far away from Hee-Haw and Nashvile. When the culture minister of Canada worries about Culture, I say lets export Hockey, Molson, Wheat, Very Good TV shows (This hour has 22 minutes is a prime example) as well as the word "Centre". My wife is Acadian (Cajun of Louisiana) in an ironic twist of fate, my late father's
second wife was French Acadian and I learned to speak French since I live in Louisiana and was are as French Canadian as the Maritimes. I speak on the Ham Radio to my French Canadian Friends and the heritage is the same since here in Louisiana we are closer to the Maritimes than the the other states where English is the heritage. Our Cable TV has some Canadian Channels and I watch Canadian TV since some programmmes
have better stuff than American TV out of New Orleans.

Our Anglo Saxon heritage doesn't allow for much in the way of divergent culture development since the North American Continent developed only 2 different Countries, A British styled Canada and an English Speaking Republic. They mirror each other and should be kept seperate to allow for the development of new ideas to be tested and if they are successful,
exported to each other. The major problem is the difference in the population
numbers and how that affects marketing stratigies and political philosophies.

We are both elected democracies bathed in freedom and with Law based in Magna Carta
and dignity of Man we will try to correct those injustices, right the wrongs
and put each barrel standing on it own bottom, fairly.

Martin

You can not do that to people (Rwanda, Chechnya, Afganistan..) who
never came out of it. That's the problem.

4797. Re: Discone question

Walt,

Thanks for your comments. I have the 20-176A up about 15 ft. higher than the RS discone on a different structure. The 20-176A is the primary antenna that I use with the BC 780XLT and I have experienced very little overload on the frequencies that I monitor. I also have a scantenna on the same mast below the 20-176A for use with my PRO-2042/OS535 setup. I find the scantenna to be the best performing antenna that I currently use; everything comes in extremely loud and clear. Besides buying two spare 20-176A antennas I also bought two 20-042 antennas when they were on closeout for $9.99. I do not see any difference between the scantenna and the 20-042 except that I paid a lot more for the scantenna from Grove.

The best RS antenna I ever used was the big 20-014 ground plane but mine was slowly destroyed by the weather since it was so exposed and I can no longer find one. That is why I now buy a couple extra of any antenna that I find to work well. The problem with the RS discone from my experience is not from signal overload but underperforming by not pulling in the signals like my other antennas do. Of course I know that the discone is designed to work over a wide spectrum and will not perform as well as an antenna designed for a particular frequency or range, but the 20-176A and the scantenna are also designed for a wide frequency range and IMO they perform better for me where I live. I have been into scanning for about 5 years and have an AR8000, PRO-26, BC235XLT, and an ICOM IC-2SRA besides the BC 780XLT and PRO-2042 and I have tested all of my radios on various frequencies with many different antennas at the same time and I just have not found the RS discone to perform as well as most of the other antennas I have used in the past.

Good luck.

Make no mistake about it - this terrorist attack was specificly designed to
force the US to severe ties with Israel.

I understand that freedom of speech extends to the internet and beyond,
but... what was the point of writing this message? Do you seek to downplay
the hurt and devistation of tuesday with events from the US military's past?
Please, if you feel you need to celebrate this tragedy as a triumph in the
eyes of people the US has hurt in the past, please celebrate it to yourself.
By and large, people around the world see these acts of horror soely as
that, horrific acts of violence. Let us grieve for those people that are
victims of this event, don't try to downplay what has happened.
Thanks

The Soviets tried that, remember? Ten years and tens of thousands of dead Soviet soldiers and they got thumped. Do you think the US has the stomach for a protracted ground war? Nope.

Why should we have ties with Israel anyway? They are NOT good allies. They continue to use too much force against the Palestinians, exascerbating the conflict. Ariel Sharon has been lobbying for the release of Jonathan Pollard, who spied on the US for Israel. Good allies don't do that. Not to mention Israel's transfer of military technology to China and North Korea.....

We are not living in the past dipshit. This is the present and what those maniacs did to the USA will not go unpunished! If we need to go to war to prove we wont stand for this then thats exactly what we need to do. Anything less will not cut it!!
But for now we need to put all of our efforts in praying for the victims and their families.....David

I've used both the discone and the 20-043 ground plane. I didn't observe much difference in the 140-175 MHz spectrum. However, the discone definitely outperforms in the 225-400 MHz Mil Aviation band. It also does a better job in the FM broadcast band and at 800 MHz.

That's why I said "flag" instead of "American flag." I believe everyone
should fly the flag of their country. And if you want to fly it at
half-mast out of respect, then that's great.

What I had in mind was the electrical wiring in the attic, to provide electricity for ceiling lights in different rooms, etc. But, as I said, I don't think it will matter much since electrical noise doesn't affect VHF/UHF like it does MF or HF. The only other concern would be safety, but the wires in the attic should be sufficiently insulated. If not, then you have other problems, such as a fire hazard.

By and large people of the world do see it as a horrific acts of violence, and that did not downplay it a bit. It tried to make you think a bit beyond knee-jerk reaction, and to put it in a wider context then "bomb the fuckers to the stone age". It obviously failed.

Thanks guys! I had forgotten that people rarely understand Chomsky and usually misunderstand him. Your response actually proves his argument about a missle defense system.

To put it another way: Who would decide which commercial aircraft are 'off-course' or deemed a 'threat'? Would you fly in the united states if the government could arbitrarily decide that a minority of citizens [passengers] were expendable?

-Ken Flanagan

I do not think that the intention is to downplay what has happened.
It is one of the worst atrocities committed on humanity and the world
would have been better off without it. I had friends working in the
Trade Center who luckily escaped by the skin of their teeth. In order
to make sure that such an event does not happen in the future, one
has to really think out the reasons why this happened. At least part
of the reason is atrocities committed by the US in different middle
eastern countries in the last 20 years. It is important to be careful
not to repeat the mistakes of the past. If today the US goes and
just bombs Afghan civilian targets (like in Sudan in 1998), numerous
innocent people will die. Think about the child who sees his father
a peasant die in front of his eyes when an american bomber plane
bombs his neighbourhood. Inevitably, some people will escape. This
child more likely than not will enrol in another terrorist camp to
avenge the death of his innocent father. As much as the "nuke them
all" camp likes to think, you cannot really nuke them all, without
turning it into another world war, even then you cannot get them all.
Rest assured, they will come back to haunt you in 10 more years.
Violence begets violence. On the other hand you cannot let the
terrorists go scott free. The appropriate response is to understand
that flawed foreign policies result in large domestic casualties and
change them and to "attack" the terrorists and regimes that harbour
them with a carefully thought out plan. Blanket bombing of Afghanistan
will almost surely not kill Bin Laden or the Taliban but just
create more enemies but intelligent operations can get them all.

And oh yes, it would do a world of good to take out all terrorist
operations *before* they come to haunt you, instead of only getting
Bin Laden. Imho the Taleban and the Pakistani terrorist camps are
a greater threat than bin laden. If you take out the safe havens
running such operations will be harder. The point is that it is
not easy to find and eliminate such operators, so intelligent operations
are needed. It is pointless to eliminate pharmaceutical factories
while the real terrorists are untouched.

Maybe it failed because it's a bullshit sentiment from some ultra left-wing pacifist? I've seen reference to
this article and a couple of others all over the internet and when I first read the articles themselves, I was
half expecting them to start calling the president and generals from WWII war criminals for attacking Germany.

Where do you draw the line?

I understand that you're angry, we all are, but there's one thing you are missing here: The attacks have been conducted by people who lived a normal life, in the US and Europe. They are married, go to work, it might be one of your friends, the postman or the waiter in your favorite restaurant. And, there are still others living among us until someone 'wakes' them up, maybe even after years. We have just learned that those 'sleepers' are able to kill hundrets or thousands of people by turning a jet into a weapon with minimal resources: a flight training and a knife. That's new and it's frighting and it will change the world. Every little fundementalist group in the world, islamic and others, could have this potential and you won't be able to kill them all. I think, those in charge should very well consider this before starting any kind of reaction...Again, this will change politics, it will change the world.

Attic installation is always a compromise. Height is everything at VHF/UHF. Roof or chimney mounting could get you an additional 20 feet or so of altitude which will definitely help. If you must put it in the attic, at least make sure you don't have foil backed insulation in the ceiling.

My mom lives in Nassau county. She's getting a very weak signal from Channel 2. She says Channel 11 came back on yesterday. Channel 25 is very good, and Channel 21 on Long Island is carrying WNBC/WNET/BBC at variuos times.

What amazes me is that if you visit the websites of any of the TV stations, they don't even mention that they are off the air!

How quickly could one determine a flight is off course? You are aware, I hope, that passive radar is relatively obsolete. Airplanes use transponders nowadays. Switching off the transponder simply makes the plane 'vanish' from the radar. Is it a failure of the transponder or a hijacked airliner? How quickly do (can) you respond?

The original message about 'atrocities' committed by the US simply ignores the attacks the US has suffered overseas. If a loose cannon were loose in the White House, you might see a few missiles loosed towards the guilty area - not a reasonable response in a civilized world. Unfortunately, I feel that the U.S. no longer has much choice other than to undertake a massive invasion of any country proven (beyond reasonable doubt) to be harboring people responsible for the deaths of many thousands. This will probably involve a house by house, building by building search - which means (likely) sniper fire - which means a response such as a rocket launcher. My guess is that no one has seen anything yet. This has to be stopped - now - before more countries in the civilized world suffer such fates. We have seen Lockerby - and others. Until we are all safe, none are safe. This will likely be a war and an invasion of one or more countries. This, unfortunately, will result in civilian deaths - yet will HAVE to happen. The evil MUST end.

ok.. educate me on this one..
I thought that you could still be detected on radar even with the transponder off..
only you couldnt get important specifics such as altitude, flight path etc..??????

Civilian ATC radar gives a primary response even if the xponder is off.
It only has azimuth information, no ID or altitude. Military radars
will also track altitude.

I've been away from the scanning scene for eons, and in looking for a new receiver this week I realized that I haven't a clue what I'm looking at, what capabilities I want, etc.

After reading numerous reviews, and a few FAQs (that left my cerebellum winded) I seem to be a LITTLE closer to a choice. I've narrowed it down to the following receivers, and I'm not really sure of the differences between them:

ICOM IC-R2
Alinco DJ-X2T
Yaesu VR-500

I'm also considering the ICOM IC-R3, and wondering if it is worth the extra $$ for the "gee-whiz" features.

Any information/experience/etc. would be greatly appreciated!

TIA

Hi...the Nazi's at ebay cancelled my auction for my PRO-2006, so I am offering it here...unit is in perfect condition, comes with pull up antenna and manual, and has been sitting in my guest bedroom/office for it's whole life...I don't smoke, so there is no smoke residue whatsoever on the unit. Unit has no gaps in coverage, if you know what I mean.

$300.00 shipped by FedEx Ground anywhere in lower 48 US states. I still have the picture I used for ebay (grrrr.....I get mad when I think of those bastards)at the following URL, if you want to look at the unit:

http://www.unrealpimps.org/charlotte/Scanner.jpg

My wife has a PayPal account, as well as BillPoint, so we can do it that way if you want...or you can send a check or money order...if you use a check, I'll need to wait for it to clear before I ship the unit.

I'm selling because I have one of the new Uniden TrunkTracker II units, and I seem to enjoy listening to our local trunked public safety system a lot more...plus, I could use the money!

4835. RS PRO 2006-Excellent!!

Newsgroup: rec.radio.scanner
Date: 2001-09-14 20:20:13 UTC
From: dbaker@cfl.rr.com
Message-ID: <b8effb43.0109141220.1efc1a11@posting.google.com>
Source record: 59851

Hi...the Nazi's at ebay cancelled my auction for my PRO-2006, so I am offering it here...unit is in perfect condition, comes with pull up antenna and manual, and has been sitting in my guest bedroom/office for it's whole life...I don't smoke, so there is no smoke residue whatsoever on the unit. Unit has no gaps in coverage, if you know what I mean.

$300.00 shipped by FedEx Ground anywhere in lower 48 US states. I still have the picture I used for ebay (grrrr.....I get mad when I think of those bastards)at the following URL, if you want to look at the unit:

http://www.unrealpimps.org/charlotte/Scanner.jpg

My wife has a PayPal account, as well as BillPoint, so we can do it that way if you want...or you can send a check or money order...if you use a check, I'll need to wait for it to clear before I ship the unit.

I'm selling because I have one of the new Uniden TrunkTracker II units, and I seem to enjoy listening to our local trunked public safety system a lot more...plus, I could use the money!

Call or email with any questions,

David Baker

Just to add to this, I had a discone in my attic and I still do. I get OK results with it since I am in somewhat of a high area of my neighborhood. I used as a 2m ham antenna for a while too and it worked pretty well.

True Story

In March 2000 Kevin Uliassi was attempting a solo flight around the
world in a balloon. I was on the ground crew and responsible primarily
for position plotting and web site updates. About 8 days into the
flight it seemed that he would fly across southern Afghanistan. Since
US has no diplomatic relations with the Taliban it was impossible even
to ask for overflight clearance. Of course, a balloon doesn't steer too
well either.

So our flight director called the State Department. We were told that
"they have Migs" and wouldn't hesitate to shoot down the balloon.
"How high is he flying?" said the guy at State. "29,000ft".

"They have no radar" said State. "The only way they know he's coming is if you tell them".

So for 10 hours we stopped position reporting on the web site due to "server problems". When the server came back up he had passed Afghanistan and was over Pakistan.

I don't know how to save it.
It is not the full video, later on you see the fire Officer pick up
his handset and call it in over fire freq.
How do you DL or save it from CNN? All I could do was view it.

>
> Where do you draw the line?
>
> Keith Grossman
> D17016

Its a chicken and egg thing. Why do you think up to 24 guys were willing to kill themselves
to take out america's
symbols of commerce and defence? They didn't just wake up one day and say "Hey what the
hell lets go kill
ourselves and a whole bunch of other people." They have grievances - a long history of
grievances against the
west stretching back to...well as far as you like...the crusades...the destruction of the
ottoman empire, etc,
etc.

Not that I would suggest for one second their grievances justify what they did. The thing
is to short-circuit the
violence, otherwise anything the US does is just going to raise another army of suicide
bombers.

Another half-baked cruise missile attack is pointless. They either need to send in the FBI
arrest Bin Ladin (if
it really was him) and totally avoid any collateral damage or they need to go in with a
sledge hammer and so
totally destroy anyone who has anything to do with terrorism that it will take generations
for them to get back
to strength.

And maybe nothing the US does will make any difference. It is really hard to see anything but negatives coming
out of whatever action they take, and that is why we need to understand everything we can about the terrorists
and their motivations before the west acts. Otherwise instead of stopping the violence we will just accelerate
it.

As to Germany, if the allies had acted with restraint like Wilson wanted them to at the end of WWI there might
never have been a WWII. The Versai treaty was the foundation stone for WWII.

I'd prefer a softly softly approach whose main concern was to prevent future bombings than to get "revenge" in
this case, otherwise we'll just be setting fire to the souls of another generation of potential suicide bombers.
If we go in hard and without due consideration the horrific scenes of NY and Washington will assuredly be
repeated.

cheers,

Baden

A palpable hit, my friend.

Implicit in Bush's seeking of support around the world to stop terrorism is American action to stop financial support from the US to the IRA.

He may not realise this little point yet, but seeing as he's asked France, Canada and other countries to destroy known cells of insurgents in those countries, I think this little fact about the IRA might be politely mentioned.

If you haven't figured it out by now, terrorists are enemies of peace.

We are not the Soviets, weapons and times are
different. Air superiority is a given.
A relentless bombing campain, carpet bombing
some areas would likely. Remember the ground
war with IRAQ ?

I

SWITCHING OFF THE TRANSPONDER MAKES THE PLANE DISSAPPEAR FROM RADAR???COOL
,TOO BAD THEY DIDNT KNOW THAT BEFORE THEY SPENT 1 BILLION DEVELOPING STEALTH
TECHNOLOGY.I DIDNT KNOW WE HAD STEALTH 747 PASSENGER PLANES!!!! look here
dummy...switching off the transponder only turns off the planes ability to
report its vector,heading,altitude etc...not its relative position.and by
the way,planes have radios,a plane that goes off course,and wont answer the
radio......well if i was a betting man in las vegas...id bet that plane was
hi-jacked....wouldnt you. elpasogunslinger

i dont understand why some of you are so afraid to have a missile defense system? defense???get it?? not offensive system.a defensive system shouldnt ruffle anybodys feathers.we shouldnt have to ask for permission to defend our selve either.isnt that silly....hey mister russian....can i pleeeees have the permission to protect my own....pleeeees????some say it wont work.well.....weve come a long way since the sixties buddy,most scientists already agree its very do-able...it just requires the will to do so.remember,this is america...weve been pretty good over the last 200 years at getting shit done and making it work when we want to.....one last thing,some say it wont get all the missiles that come in.....well....lets say that (1) 20 -megaton device will vaporize 10 million people.....and lets say that 10 missiles are fired.....and 9 get through.....and 90 million people are vaporized.....but you save 10 million people. 10 million saved. .....10 MILLION SAVED.....SOUNDS WORTHWHILE TO ME.

First, do you have any trunking radio systems in your area, if
so a Uniden or Radio Shack trunk tracker may be a more versatile
choice. If all the action in town is conventional then the small
hand helds are great. Check out the trunking frequencies on
the STRONG SIGNALS web site trunking board.
They are at the SITE LINKS at the top header of the board. And
there are Trunking Radio Reviews also.

Not sure if Morpheus has it. I got it from Kazaa, from www.kazaa.com. I just used the words "World Trade Center" in a search for all media, and I got lots of pictures and clips. This particualr clip was recorded from CNN. It shows the airliner coming from behind one building and crashing into the tower. A few seconds later, you can hear the boom from the explosion.

Doesn't western europe count as the west anymore? It always has in any history book I ever read. The west didn't come into being when the first shipload of pilgrims hit north america you know. Western civilisation is just a tad older than that.

cheers,

Baden

True, we are not the Soviets but that makes little difference. Don't get me wrong, I want to see the people who are responsible for the horror in NYC and DC to swing as much as anyone but Afghanistan is a tough nut to crack and a protracted ground war will be fraught with death on both sides. I don't doubt this country's resolve but it's not going to be like Iraq.

First off, no one, NO ONE has taken Afghanistan since Alexander the Great and he was passing through-he didn't try to hold it. The British tried and couldn't-not for long in any case (much of their control was based on payoffs to the local chiefs) -beyond the Kyber Pass-it was really in the hands of the local Badmashi. The British retreat out of Afghanistan in the early 1840's is a testimonial to how tough the land is -especially during a Winter campaign- and how advantageous it is for defenders or for guerilla ops. The Soviet campaigns in the early 80's speaks for itself.

Second, the terrain is NOT Iraq-it is more akin to the Rockies and the locals know the ground. We don't.

Third, unlike Iraq, the locals are mostly armed with nothing larger than carry stuff which means our satellites are going to not have much to look at and predict what is going to be where so we can hit it.

Fourth, (just a guess) but at minimum I would say three helicopter borne infantry divisions for a start with as many people in support and it's feasible that we will have Kabul and the immediate surrounding area but, still-we will take casualties.

Fifth, we are capable of taking Kabul and toppling their government but still, prying the locals out of the hills will not be like Iraq.

Again-I do not doubt America's resolve not do I doubt the abilities of our armed forces but I do doubt that an Afghan winter offensive will be anything at all like Iraq.

Finally, if there is a place called hell, it is reserved for those who
brought death and destruction to New York and Washington.

Well, ya know -- I think that western Europe could still be considered the western world. Especially if you're referring to the middle ages, from the point of view of the middle east. Just a thought there. We're not the ONLY west out there.

> a horrible tragedy. this guy is a dum-ass.

I'd like to hear your responses to some points.

1. The national missile defense program is designed to stop ballistic missiles. An airplane flying at office-tower heights has nothing in common with a ballistic missle. Neither the missile-tracking sensors nor the weapons used to knock down the incoming missiles are designed to track or target aircraft. How would NMD stop the planes?

2. Even if it could shoot down an aircraft, someone somewhere would have to decide to shoot it down. No matter what weapon was used, how long do you think it would take for that to be authorized? Who would authorize it? Shooting down a airliner with civilian passengers over a densely populated city is not something that can be decided in a matter of minutes. Would there have been time to authorize it before the other plane hit?

3. "This guy" suggests that before the United States goes and makes more enemies in the world, it thinks first about how it got into this mess in the first place. I agree that what happened in abhorently awful; I believe that the U.S. should not show weakness at this time. But have you never heard of learning from your mistakes? That's not "dum" -- it's exactly what's needed. Chomsky is trying to keep those past mistakes in mind while the country thinks about what to do next. If you read what he says carefully, he is not against retaliation - he is merely against continuing to make the same mistakes that got the country to where it is.

The *whole point* of what Chomsky had to say is that we are most definitely living in the *results* of past actions. Only a "dipshit" would charge ahead with a kneejerk reaction without thinking about how past kneejerk reactions have brought us to where we are today. Don't be one of those dipshits.

> i pleeeees have the permission to protect my own....pleeeees????

The reason NMD requires permission is that the United States, among
other countries, explicitly agreed not to build defenses against
ballistic missiles under the Anti-Ballistic Missile Treaty. You don't
believe in keeping your word or honoring contracts?

Furthermore, the reason a defensive system can upset other countries is
that it negates their offensive weapons. That sounds logical, sure. But
the entire Cold War was based on the race to invalidate the other guys'
weapons and keep building new ways to kill each other. NMD will merely
drive other nations with ballistic and nuclear weapons (China, Korea,
etc) to get back into the business of researching new weapons.

Let's say you and I both have knives. Neither of us feels like attacking
the other, because neither of us has any particular advantage. We're at
peace. No one else is coming along with knives either. Why then would
you go and put on armor that protects against knives? Every other guy is
going to go and get guns. You're more vulnerable now, not less.

People against NMD have long argued that the U.S. is infinitessimally
less likely to come under ballistic missile attack than it is to suffer
from acts of conventional terrorism. They were very clearly right.

> it just requires the will to do so.

And a ton of money, and it will piss off a lot of countries. I wouldn't
mind spending all that money if there was a reasonable chance of the
U.S. getting attacked by something NMD could stop, but I have not been
persuaded that there is. On the other hand, pissing off a lot of
countries is *exactly* why there are people like Osama bin Laden out
there and *exactly* why terrorists attack American targets all the time.

> lets say that (1) 20 -megaton device will vaporize 10 million people....

Let's say that your worst enemies don't have 20-megaton rockets but
instead use pocket-knives and boxcutters to hijack airliners and fly
them into buildings ... now what?

I hate to burst your bubble, but a U.S. invasion of Afghanistan would look a lot like Vietnam.

1. The Soviets had perfectly good soldiers and equipment.

2. They also had air superiority.

3. Relentless bombing and carpet bombing would be nowhere near as effective in that terrain as it was in the Gulf for the same reasons it didn't work in Vietnam.

4. The ground war with Iraq was against mostly concentrated military formations, not rebels hiding in villages with AK-47s.

Sinclair, Gordon Allan, journalist, author, radio commentator, television panelist (b at Toronto 3 June 1900; d there 17 May 1984). He began a long and often controversial career when he joined the Toronto Star in 1922 after a modest education and various dead-end jobs. During the Depression when the country yearned for release, Sinclair, on assignment for the Star, transported his readers to faraway places, from war-torn China to Africa. He began his radio career on 6 June 1944 when he broadcast the news of the D-Day invasion over CFRB, Toronto. He continued to broadcast news and comment, his own feature, "Let's Be Personal" and "Showbiz," and he was an original panelist on the CBC's enduring FRONT PAGE CHALLENGE. He gained international recognition in 1973 when he broadcast on CFRB an essay that became known as "The Americans. " It was subsequently recorded with a musical background and became so popular that Sinclair was revered by Americans, including Richard Nixon, John Wayne and Ronald Reagan. He was author of several books including Footloose in India, Cannibal Quest, Khyber Caravan and Will the Real Gordon Sinclair Please Stand Up?

Yes, absolutely.

I just noticed that this thread has been crossposted to several newsgroups. I am posting from the
rec.skydiving newsgroup and it's really very obvious that we have nothing in common so could you all just
exclude our ng from your discussions from now on? Cool.

Oh, and you folks and Norm Chomsky might not want to go suckin' each other's dicks just yet either because
despite all of your bullshit rhetoric, we are about to get violent.

4879. CP Rail squelch codes

Newsgroup: rec.radio.scanner
Date: 2001-09-15 08:29:00 UTC
From: Pat Deethardt <deethardt@tomah.com>
Message-ID: <deethardt-57DDAD.03281915092001@news.charter.net>
Source record: 59895

Anybody know if CP Rail uses any type of squelch codes, or do they just use carrier squelch? I'm mostly interested in their Wisconsin operations, but other areas would be useful too.

Thanks,

Pat

The glee in this last remark takes the gloves created by respect for the innocent dead off. How can you be so excited about adding to them?

Embrace violence of the sort that created this mess, yeah. Ignore basic history from one of America's greatest intellectuals (yes, Mr Chomski), and with it the chance to learn the odd lesson, pull your heads out of the sand. Prefer to believe that America is a peaceful nation (you've been fighting between two and four wars at a time since 1990), and that this assault came out of nowhere.

America is enormously powerful. It has the power to grant the terrorists their wish, and start world war three, where they can finally unite the islamic world against the west (believe me, the Islamic world as a whole would prefer to avoid this, but world war one started in a similar fashion). America also has the power to spare the world this fate. I say this unequivocally, as a man with children: if world war three starts over this, it will be the fault of the US. They had all the choices. They will have given a fanatical fringe element exactly what they want, and sucked us all into something terrible as a result. So ignore history. Let the violence begin. Insult people who disagree with you, all in the name of freedom and righteous anger. Please let Bush's advisors be smarter than this.

Now back to your recklessness.

>

Yes, 282.3 is an FAA high altitude Mil Air Traffic Control freq for JFK.
It's based in Matawan, NJ.

From about 2PM to after 8PM yesterday (Friday), I was hearing all kinds of stuff related to the Presidents visit to NYC. There were AWACS ("Bandsaw Lima" and "Bandsaw Mike") overseeing a variety of Tankers ("Fueler 91" etc.) and Fighters (F16s with callsigns like "Remit 63" "Tops 41" etc.). Their mission was to escort Air Force One from Washington D.C. to McQuire AFB, and then escort Marine One from McQuire to lower Manhattan.

The most active freqs were: 225.8, 271.0, 295.8, 263.0, and 263.6

For most of the time, the aircraft were just "orbiting" and watching their fuel levels while GW was on the ground. Several air refueling operations were conducted. When Marine One took off from Manhattan, there were three decoy helocopters with it. The escorts were having trouble figuring which one was their "package."

4886. FS: NEW SONY ICF_SC1PC

Newsgroup: rec.radio.scanner

I have for sale a new Sony ICF-SC1PC hand held scanner. I bought this
radio to take on business trips and never did have a chance to take it
with me. This scanner covers 25 to 1300 MHz continuous but excludes
cellular frquencies. It has 300 memory channels and is pc programable
with the included software and accessories. I am the original owner and
bought this brand new.
I am asking $150.00 plus shipping from 48026.

4887. FS: ICOM IC-R100 COMMUNICATIONS RECEIVER

Alas, when Sony discontinued that scanner, it wasn't difficult to pick one up for $100 new. I'm in the same position as you, having bought one when it was selling for considerably more. I've decided just to hang onto mine and keep it for emergency use, say, when the power goes out or in the event of an impending blizzard and I want to monitor road or weather conditions.

Actually, the fighters that escorted the president from McGuire were F-15s.
They flying really low over my house. The F-16s from the Vermont ANG were
maintaining their patrol at 25,000 to 27,000 feet over NYC airspace. They
had a few tankers with them as well.

Since all the closeouts are long gone, I don't think his asking price is
all that unreasonable. The same thing happens to Radio Shack
scanners. Radio Shack blows out discontinued radios for 25% of the
original price. Once they're gone, the used price seems to head back up
quite a bit. In reality, it makes no difference if you paid full price
or blowout price when you sell something used.

Switching off the transponder DOES NOT make an aircraft 'vanish' from radar. When the transponder is switched off all ATC sees is just a blip with no identification. When the transponders were switched off, the aircraft deviated from their flight plans, and ATC could not raise any communications, that should have spelled hijack in big red letters in ATC. We see another failure in air traffic safety because of the lackadaisical attitude that has been the norm for the FAA for quite some time now.

More pacifists bull crap. I guess you just want to set around and do nothing until your children are murdered by another attack by these radical extremist? They only understand violence and the only way to respond to them is in kind. Violence is all they understand. You cannot reason with unreasonable people. You think the attacks on the WTC and the Pentagon were bad, you haven't seen anything yet unless the one behind Ben Laden and the terrorist are killed, and that would be Saddam Hussein.

What I don't know about ATC would fill volumes but I recall a story of an Air Canada 757 when they were new and the fuel guages did not work. Canada had gone metric so the guy dipping the tanks (legal, fuel guages are not required) converted to kiligrams and left the plane with half the fuel load for Toronto-Vancouver. When it ran out over Manitoba and the electrics stopped, the propellor-generator gizmo lowered out of the nose did not do a whole lot and the transponder failed. This resulted in the plane dropping off radar on five of six radars at Winnipeg. The plane ultimately landed safely at an old RCAF strip with an Armco barrier across it to prevent drag racing.

The radar in question was due for removal in two weeks and the pilot was the Canadian glider champion. Sounds like a minor miracle.

Seems kind of silly to ignore blips from non-transpondered planes; might it be possible that only some viewers get the raw stuff. Damfino.

Jerry, I agree with you on many points.

Afghanistan was for my Russian people what Vietnam was for my American people. Soviets had the edge for the first year with their helicopters, which gave them air superiority. But then the US gave the mujahedeen a wonder toy, the Stinger missile. The war was lost. It cost many lives, nothing was accomplished. Same can happen if war is started again. Yes we will have the firepower, but every kid is your enemy that will shoot you in the back when you turn it. The support of the locals, the terrain, the faith, and the fact that they have nothing to lose but much to gain, even if they die, will play a major factor.

I see two solutions, both of which are VERY costly. Eradicate them all, or rehabilitate them all. Only if you change these peoples minds (which I think is impossible) you may accomplish something. It's easier to destroy, start a holocaust, eradicate with prejudice. The Jihad has been going on for 2 thousand years! It's been around much longer then the US and most of the world. Nothing can stop it. These people are 300-400 years behind culturally, it's impossible to bargain with them, try to deal with them. Their faith tells them to kill and to die for Allah is the goal. We call them cowards. They die KNOWING that they were heroes to their faith, KNOWING that what they did was right, KNOWING they were going to their heaven. How can you change that?? We are coming to a day when they will carry a small nuclear device in their back pack to the key targets and take out whole cities instead of a block, kill millions instead of thousands. Will you and I be one of those? May be, may be not, but our kids will be. Bin Laden said that every American citizen is a fair target, civilian or not in his Fatwah. He declared a war on us back in 96 and made it clearer in 98! It's time to take serious action and strike back.

Since any form of a homosexual act is forbidden
in Islam....

If it's possible to have bin laden and his followers
raped in the ass and broadcasted by satellite throughout
the globe his own people will shun and try to kill them.

I know it's strange.. But come on.. Its BRILLIANT!

David,

Why are you giving it away? It sold for over $300.00 new! You should get at least $450.00.

Actually, it has been proven that they aren't done yet.

So don't be so quick to condemn them.... I would venture to guess that we will be seeing
more terrorist attacks before it is all over.

I pray I'm wrong, however.

Hmm, the price you paid for something has no bearing on what you sell it for used? Tut, tut, my good man. Of course it does. The reasons are so apparent that I won't waste time explaining it to you.

I never said they price was unreasonable, although I wouldn't pay it. If I were in the market for that scanner, I would try to find it for less than what's he asking because I know there are X number of people who have purchased it for a lower price. Even if they were to ask what they paid for the scanner, I would still be able to buy for $50 less than this particular one.

Common sense.

4919. 900MHz Frequencies

Newsgroup: rec.radio.scanner
Date: 2001-09-15 21:48:49 UTC
From: Bob <rwscull@yahoo.com>
Message-ID: <51Qo7.9912$IE3.1115384@newsread2.prod.itd.earthlink.net>
Source record: 59835

Greetings,
I am able to monitor my local school district school buses on 935.3625 but I also pick up some local businesses on this freq also. Is this part of a 900MHz trunked system or do I need to use a PL on this freq? If it is part of a 900MHz trunked system would anyone know what the other freqs in this type of system would be and do I need an input freq? Any help would be appreciated.

Thanks,
Bob

I certainly have two. I have one that i've had about 10 years. The AC adapter has a short in the power prong. It's a Realistic 10ch scanner. I think it does 8 channels a minute. *grin*

My new one is a PRO91. I totally love it. I forgot how fast it scans. I'm still trying to get used to having banks of channels. But that has been nice too, I can switch on off groups. For instannce, I have a Police, Fire, Other group and if one is too noisy, turn it off. Helpful when those times of months they are doing 10,000 traffic details or miscellaneous sick person calls.

One of the features of this scanner--which i'm not sure I like yet--is the priority button. I have 5 groups and one channel per group can be set as a priority, which it checks frequently and if it finds it's receiving, it will switch channels on you.

Eventually, our county is going to 800mHz trunked. Should be interesting when they do. I haven't even looked at the part of the book yet.

After Tuesday's events, I'm soo glad I kept my old scanner. There was just too much traffic for one.

What is the most number of scanners anyone has? I would be interseted to know. I think the max one could listen to is three, without a lot of experience. I had on our local news radio, two scanners. My ears/brain hurt that day. (as well as my heart) My mom was glued to the TV.. her eyes hurt. Totally different sensation.

A war-torn country is easy to occupy? Really. Tell that to U.S. soldiers
who went to Rwanda.

What does a ruined infrastructure have to do with it? The people the
U.S. would be fighting in Afghanistan don't need infrastructure to shoot
you with a rifle as you walk through their tent village in the middle of
frickin' nowhere, which is the kind of war you'd be looking at. Once
again you make it sound like you're dealing with some kind of organized
military outift (which requires infrastructure of some kind). You're not.

The people of Afghanistan may not be fond of the Taliban, but they'd be
absolutely beside themselves with rage if U.S. soldiers started turning
up on their doorsteps. You think the people of Afghanistan would be your
friends if you invaded them?

> This country is ripe for the taken.....

That's what they thought about Vietnam.

What's interesting about this response (and so many like it) is that nowhere does Chomsky suggest that the U.S. should "sit around and do nothing." Nor is he pacifist. All he suggests is that past episodes of the U.S. attacking foreign nations has given birth to generation after generation of people who hate the country and would love to pull off revenge attacks of their own, like we saw this past week. He's not saying the U.S. should turn the other cheek, he's saying think carefully about how you try to solve the problem, and don't make the same mistakes that got us where we are today.

I don't believe the U.S. should show weakness right now - take action, by all means. But be smart about it. That's all I'm saying, and it was all Chomsky was saying too.

> it be possible that only some viewers get the raw stuff. Damfino.

Most ATC installations in North America have the ability to toggle
between transponder and primary (or raw) radar data. They could have
followed the flights if they wanted to, and we have no reason to believe
they didn't track them all the way to the end.

> have spelled hijack in big red letters in ATC.

We have absolutely no reason to believe that the people tracking all
four hijacked flights didn't immediately, or very quickly, realize what
was happening. But what do you do then?

Let's say you think the plane's been hijacked. In almost every case of
hijacking in modern history, the people who took control of the planes
were not interested in dying. They wanted to go somewhere, or keep
hostages as bargaining chips. Even if ATC realized what was happening,
what would they do about it? Call people, talk to authorities, try to
figure out what they want, where they're going, etc. The last thing any
reasonable person would have assumed is that they were planning to crash
the planes. Furthermore, even if you KNEW that, what would you do? How
would you handle a situation that, for these people, has never happened
before?

I can't figure out why people are dumping on ATC as if they could
somehow have averted the tragedies by magically landing the planes with
a special button on their radar consoles.

> that I won't waste time explaining it to you.

The price ANY _one individual_ pays for an item has little to do with the actual _market value_. Not what I sell it for, as I can choose to sell it below market value, or I can sell it under market value unknowingly.

I bought a Garmin GPS III+ at an Office Depot going out of business sale for a bit over $99. The same GPS still sells daily for $290 (TVNAV)-425 (Jensen). The sale units are long gone. Does that mean my used GPS is worth less than the guy's who paid $300 for his. I think not, there are both _worth_ exactly the same on the used market, if they are in comparable condition. Price paid by the individual has little to do with the grand scale of things.

Simply because you, one individual, can find an anecdotal example of another unit selling for less, does not mean the value of a used item changes by all that much. Of course, if you can find 100 for less, that's a different story. Want more examples?

Barry

FWIW, I also bought my Pro-2006 for under $125 on closeout. Does that mean it's not worth the same $250-300 or so all the rest of the 2006's are fetching used? <G> I have never paid more than $125 for any Radio Shack scanner, and I have nevr sold a used Radio Shack scanner for less than 50% more than I paid for it.

> wonder toy, the Stinger missile. The war was lost. It cost many lives,

Yup. About $3B worth of equiment was channeled to guerilla groups -
lot of it,
if not most of them through Bin Laden. CIA invented "Jihad" as a nice
tool for a proxy war.

> I see two solutions, both of which are VERY costly. Eradicate them all,
> or rehabilitate them all. Only if you change these peoples minds (which
> I think is impossible) you may accomplish something. It's easier to
> destroy, start a holocaust, eradicate with prejudice. The Jihad has

Russian learned some lessons by the third time - and effectively nuked
Chechen cities of the face of the Earth. Then gathered those chechens
who can be bargained with - and gave them positions in administration,
and some money to spend.
They still taking casualties everyday - remote controled mine
made out of a pager, sometimes. Then an RPG grenade. Then everybody
gone.

The good part is - even for 400 years behind - they are not "holy
warriors"
Chief mullah of taliban - after ordering public stoning of women
noticed
outside the house sent his girls to Pakistan english language school.
This bstards just want power - and are paid by Saudi Arabia and
Pakistan,
and use people trained by CIA, like Bin Laden. That mean - we do have
a leverage on them. Just like chechens just want money and control -
not
really a holy war.

If waging a war can be useful - it would be against Pakistan and Saudi
Arabia. And of course killing off all Ladens.

> the US and most of the world. Nothing can stop it. These people are
> 300-400 years behind culturally, it's impossible to bargain with them,
> try to deal with them. Their faith tells them to kill and to die for

They call U.S. cowards; From Bin Laden 99 interview (check
http://www.esquire.com):
"After leaving Afghanistan, the Muslim fighters headed for Somalia and
prepared for a long battle, thinking that the Americans were like the
Russians," bin Laden said. "The youth were surprised at the low morale
of the American soldiers and realized more than before that the
American soldier was a paper tiger and after a few blows ran in
defeat. And America forgot all the hoopla and media propaganda . . .
about being the world leader and the leader of the New World Order,
and after a few blows they forgot about this title and left, dragging
their corpses and their shameful defeat."

> were heroes to their faith, KNOWING that what they did was right,

Hm. I talked to quite a few of my friends in Moscow in the recent
days -
some of them went through Afganistan. Many of their friends were
killed with american weapons there. Surprisingly - all they say to
U.S. "Good Luck,
you will need it" At least this time nobody will ship boxes of
antihelicopter
missles to Taliban. Except maybe for Pakistan and Saudi Arabia.

So ATC have two rogue planes heading into incredibly busy airspace at unknown
altitude and unpredictable heading, I'm sure their first priority was to get
the thousands of
people on all the other planes in the vicinity of those two planes out of
harm's way.
Although they did also get word to the military so that fighters were
scrambled

I understand that fighters were sent after one of the later planes but
they didn't have time to catch up (and I'd have hated to have been the
person who had to fire on a commercial flight)

If some pacifists are pretennabees and all war-mongers are pretenabees
then which is true

a) All war-mongers are pacifists
b) Some pacifists are war-mongers
c) No pacifists are war-mongers

(hell i think I just screwed that up, but you all get the gist of the
problem...heh heh, well anyone that has ever taken a standardized test
anyway)

Problem now is that enough time has passed that most batteries
will have run down by now. Most of the two way radio batteries
will only make it one day. Maybe two at the most. After that,
the normal receive drain will kill them.

Jim

Just curious, did you check with RS to see if they still had the back lights for the 06? I ordered one for mine less than a year ago and they still had them. I was going to order one of the ones shown at that web site for my 04 but my wife solved that problem for me, she knocked it off a table and it's now DOA. Oh well, I spend more time with the RX320 any way. >grin<

I agree that it isn't likely to happen, but that is bin Laden's goal!

Still, it's definitely something to keep in mind for future
avalanches, earthquakes, etc.

The equipment shouldn't be terribly hard to make. It would be
worthwhile to make one or two sniffers a standard item for fire and
rescue agencies.

Jews employed terror tactics and assasination prior to the establishment of Israel, and afterward in removing arabs from desireable lands. Menahem Begin, among other Jewish "freedom fighters" was wanted for murder by the British Mandate Authorities after his involvement with the bombing of the King David Hotel. In case you forgot, a boatload of British officers were blown up along with Jewish hotel workers. When Begin was told how many Jews died he stated "it can't be helped". When Begin went on a state visit to the UK in the 70's they had to quash the warrant just so he wouldn't be arrested at Heathrow.

In 1967, when it suited Israel to do so, they attacked an unarmed US Navy intel ship some miles off Haifa in International waters. A lot of American sailors were murdered by Israel in a lengthy torpedo boat attack and strafing/rocketing by IDF aircraft. Israel refused to pay off in compensation for this murder and mayhem until 1989, and negotiated to pay us a fraction of the actual damages only after we started balking at more arms subsidies.

In 1982, while Israel occupied parts of Lebanon, Israeli soldiers, under Ariel Sharon, allowed Lebanese Christian milita forces into Palestinian refugee camps at Sabra and Chatilla. A wink and a nod from Sharon allowed the militia to massacre hundreds of kids, women and old people. this was after the PLO fighters were evacuated from Lebanon.
Wonder why the US Marines were truck-bombed in '83 in Lebanon? It is called payback. The arabs see America as Israel's handler. Israel uses that perception at times to strike fear into arabs.

I do not give the Arabs a pass at all, all hands are bloody. I am not against any of these groups of people. They ALL have the right to exist.

Finally, ANYBODY who cheers at mass murder is a barbarian.

I have a mint condition Sangean 505 SW radio, with all original accessories, manual, and the box it came in, that I would like to trade for a handheld scanner.

Scanners that I would be interested in trading for are:

Pro 60
Pro 64
Pro 67
Pro 94

Or any other 200 channel or greater hand held scanner with 800 mHz coverage.

Thanks for reading

If the plane disappeared from radar it is because it dropped to an altitude that the radar could no longer see it, not because the transponder was not working.

Don't know exact freq. but RCCL uses marine VHF channel 62 for
ship-tender and shoreside communications away from the US. Shipboard
communication is uhf and some FM. Enjoy!

I would like to upgrade the original battery in my Uniden Bearcat 200XLT. The original battery pack is a model BP200, with a 600mAh 7.2v Ni-Cad battery.

I'm thinking about replacing only the battery with a 7.2v 1600-1700mAh NiMH battery, using the original BP200 "case" and internal charging circuit. (Battery can be found at http://www.racescanners.com/2001catalog.pdf)

Has anyone done this? Any installation problems? Will the original wall charger and internal charging ciruit work with the larger battery?

Thanks,
Pedro
Rochester, MN

Just a reminder that tonight (every Sunday night)
from 8:00 PM Eastern time to Midnite is Radio
NewYork International with John P. Lightning.
Program is done LIVE from Brooklyn NYC and
is quite good. John P. Lightning and his crew put
on a great program.

WBCQ - 7.415 mHz shortwave live
radio starting at 8:00 PM Eastern Sunday.

I also understand that you can also hear RNYI on the Net but I don't have the URL.
If anyone has the infor for RNYI via Real Audio please post the same !

Nor should you be completely satisfied after his death either. As much as I want him wiped out too, his death will not stop terrorist acts against the U.S. or it's interests abroad in the future, there's always another nutcase waiting in the wings that our government helped 'create' or supported in the past like Saddam and Bin Laden to fight bigger enemies who now are on our 'side', now THAT'S weird!

I'm not aware of any railroads that use squelch codes. They only use the standard carrier squelch.
If you're looking for frequencies, let me suggest going to "www.railfan.net". There are lots of frequencies posted there by clubs and enthusiasts.

You might also repost your question in "rec.railroad." Someone there might have some info.

Paul.

No, "Lifeguard" usually refers to a medivac helicopter or air ambulance.
Examples would be "Lifeflight," "Flight for Life," etc. These are operated by
civilian hospitals and use the callsign "Lifeguard" and the last two or three
numbers of the aircraft registration number.

Hi Dev. I use this web page a lot when trying to identify signals with
my M8000 decoder.

It has all the main ones that you normally hear on shortwave and I
always wondered what they were till I started to decode them.

4995. Speech Inversion Descrambling

Newsgroup: rec.radio.scanner
Date: 2001-09-16 23:33:23 UTC
From: ctpds49@aol.com
Message-ID: <20010916193323.18724.00001241@mb-ch.aol.com>
Source record: 59712

Speech Inversion is accomplished by mixing the speech spectrum
(typically 300-3000 Hz) with a tone (commonly 3500 Hz) to produce some
audio frequencies (3800-6500 Hz) then filtering to 3200-500 Hz
constituting the speech inversion.

Voice Frequency Inversion scrambling is descrambled
with a demodulator IC. If the filtering is lite,
it will decode some variable split band as well.

How about the sound card in your computer ?

Go here for free and sharewear programs.

http://www.muenster.de/%7Ewelp/sb.htm

Most of the programs will also transmitt but you don't have to use it.
All you have to do is plug the sound card input to the speaker of your
receiver.

thanks for the reply. I am lostening to them. still not sure what it is. I know it has to somehting to do with the horizon here. and satalite. cause it will phase in and out. Sometimes during the phase of the transmission. it will be on another frequency sorta like how gps works. this only a 15k bandwidth andis only between 137.2400Mhz to say um 138 Mhz. 138 is too high. but give or take. 10 - 50 Khz.
I will go thru the rest of the audio and see. I am just in the proccess of moving the radio and ham radio stuff to another computer and comport. etc. I really appreciate the reply. Due to all my original links being dead now. Thanks again :)

Yes, that can be done. There is only a problem if you had a fast charger.
But these are often of the slow type, so it is just fine. The differences
are it will take 2.5 to 3 times longer to charge because of the increased
battery capacity, and it will last that much longer, too. I am also aware
that there are mods for some scanners that allow you to increase the charging
current into the battey so it will charger a little faster.

In article <3BA4F31E.FC8094CB@noway.nohow>, nospam@noway.nohow says...

That is where the diplomacy comes in. Bin Laden or his surrogates in Arab governments have to be negotiated with. Bin Laden is expecting military strikes from the U.S. This is what he wants. The strikes will give him and his kind more warriors bent on destruction. Maybe next time it will be bio-warfare and over a million dead bodies instead of a building?

The Muslims know that they can not tolerate "Western values" in their religion but there is a large space between their countries and the West (I know about the Muslims in southern Europe and the proximity of Turkey to Europe but the Muslims have much room to live). The problem is Israel, there is no getting away from that. Israel is like a malignancy in the Middle East, it does not rest, it constantly tries to metastasize ("Jewish settlements"). If the "West" was the problem and not Israel then why don't the Muslims bomb Britain, France and Germany?

Only the French have been bombed by Muslims and that was because of Algeria and the bombings were by Algerians. That is the "Vietnam" for the French. The only Muslim bombing in Germany was by Libyans against U.S. military personnel in Germany.

Israel is the problem.

America is a sad place, so much promise and potential but it has been hijacked by the Zionists for their genocidal cause in Israel and the surrounding countries. The map that the Zionists are working from shows Egypt and Jordan as part of Israel.

Less than 5% of Americans (which includes the 2% of Americans who are Jews) know of the Nazi-Zionist alliance that created Israel. Americans are very immature politically and are kept that way through a massive propaganda system that is very much like what George Orwell described in "1984".

General Wesley Clark is a Zionist Jew (this has been revealed in the "American" media -that he's a Jew, not the Zionist part of the story- but is still largely unknown and people will think you are a crank for referring to him as a Jew because of his physical appearance). The New York Times is owned and run by Zionist Jews as is the Washington Post. William Kristol, Editor of the Rupert Murdoch "conservative" publication "The Weekly Standard" is a Zionist Jew. Rupert Murdoch himself may be a Zionist Jew as well because Zionists would be willing to recognize him as such (http://www.geocities.com/CapitolHill/Parliament/3975/newshist.htm).

Pat Robertson and Jerry Falwell are not Jews but they are strong supporters of Zionists, both politically and monetarily.

Zionists want all Jews in Israel, including "Jews" who are not considered Jews by the Rabbis, people with a Jewish great grandparent for instance. The Zionists understand that even Synagogue Jews will not go to Israel without someone pointing a gun at them and ordering them onto the plane.

Yes there are cheaper decoders. It all depends though what you want to decode. There seems to be a lot of rtty, and ARQ-E3 lately and also some Piccalo. Probabley due to the increased military traffic. I suggest looking on Universal Radio website, they have a lot of used gear, but be sure not to buy anything that is obsolite. If you want to decode pagers, You will probably have to buy it from a canadian source unless you are a government organization as I think it is illegal in the U.S. to sell decoding equipment like that.

That's a pretty short-sighted answer, don't you think? WHY did someone fly a commercial aircraft into a loaded building? Try to look beyond your nose -- there are reasons behind things. The attack was no random act of violence - the people responsible were motivated by SOMETHING. What do you suppose that something is? It may or may not be the relationship between U.S. and Israel, I don't know. But just because someone from nation X wasn't flying the planes doesn't mean nation X isn't part of the bigger problem that led to the attack in the first place.

Looked like an ametuer camera. The person filming, at one point, rapidly zooms in and out. Not sure why. But it doesn't affect the vdeo much, still got all of it.

There was a firefighter in uniform in the clip, just before the person apparently saw and\or heard the airliner and panned up towards the tower.

5011. What's the DIODE for?

Newsgroup: rec.radio.scanner
Date: 2001-09-17 05:23:37 UTC
From: Greg Hall <ghall1@neb.rr.com>
Message-ID: <tNfp7.323994$Jg.43792991@typhoon.kc.rr.com>
Source record: 59727

I have some basic electronic knowledge, but still have a queston I need answered.

Last week, my mobile scanner kept blowing the fuse. After checking the scanner over, there was a diode 1N4003 first thing across the + and - terminals where the DC comes into the circuit board. I found it to be shorted in both directions. After removing it (and before replacing it) I tried the scanner to make sure it wouldn't blow the fuse and it was working properly.

I replaced the 1N4003 with a 1N4001 diode and everything appears back to normal. Is the diode's only purpose to protect against backward wiring, or does it serve some other purpose? Also, the 1N4001 should be good enough for a 12V scanner, shouldn't it?

Thanks.

Greg

that is mostly what a diode does. makes it flow in one direction and not the other. there are other purposes but. that is what that purpose was for. Besides a Light Emitted Diode (LED). does sorta the same thing too.

5021. Discone connected to Yupiteru MVT7100

Newsgroup: rec.radio.scanner
Date: 2001-09-17 12:22:44 UTC
From: marcje01@yahoo.com
Message-ID: <ca10ea14.0109170422.dd67d7c@posting.google.com>
Source record: 59737
Cross-posted to: alt.radio.scanner,alt.radio.scanner.uk,rec.radio.scanner

Hi,

I've bought a discone antenna for my Yupiteru MVT 7100.
I knew when I bought the discone that I could get
problems with intermodulation because the antenna input
can be overloaded.

On some frequencies in the VHF/UHF range this indeed
occurs. I receive some FM broadcast stations. But when
I use the attenuator on my Yupiteru, it's gone, as
expected. I have a much better reception now.

However, the following seems strange to me:
I also here shortwave radiostations on some frequencies
in the VHF range.
I've used low loss coax cable and I'm 100% sure the
shielding is correctly grounded. Since the discone is
therefore the only 'receiving element', why do I hear
short wave stations? I would expect this when I connect
e.g. a long wire as antenna, but not with the discone.
After all, it's too short for a SW antenna.

Could it be that the shield of the coax cable is the
source of this? Any hints/tips?
Or is it just overloading the input comparable to the
FM broadcast stations (this would mean that the discone
receives SW much better than the standard telescopic
antenna)?

Thanks in advance,
/Marc

5022. 780 Won't follow trunk data channel move. Why?

Newsgroup: rec.radio.scanner
Date: 2001-09-17 12:32:30 UTC
From: "news2.bellatlantic.net" <bosco@aol.com>

Source record: 59738

I have a Uniden 780 that I've programmed to monitor an Erickson EDACs system. It works fine if I manually step to the control data channel, select trunking, and then hit scan. If the data channel shifts to another frequency, the scanner stops scanning talkgroups.

Any idea why? I used Trunkstar to program the scanner, and set up the bank as an EDACs wide before downloading the frequencies.

Thanks

I would recommend a simple rebuild of the BP200 with NiMH cells.
Two good companies that do this at reasonable prices are:

I have a discone which was stored hanging from the floor joists in the cellar. On an impulse I connected it to my PCR1000. Amazingly, it gets better reception on SW than the teleoscoping antenna, but not as good as a long wire antenna. Was listening to the BBC on 6.795 MHz last night here in NJ with this discone antenna mounted below ground level.

i found that even using a wide band telescopic, if i ran a length of feeder
(7 metres of RG8 patch cable) from the scanner to the antenna that i got a
bit of breakthru from SW broadcast above 30 Mhz. I also got much improved HF
and less noise pick-up but i would guess that the wide-band nature of the
antenna means that the impedance across all ranges will not be completely
balanced, so this could cause the cable shielding to act as an antenna.
Use a high pass filter with a cutoff point around 30 Mhz should take care of
most of the HF breakthru.

5030. For Sale: Realistic PRO-2004 with HB232 Computer Interface $400 O.B.O.

Newsgroup: rec.radio.scanner
Date: 2001-09-17 17:41:00 UTC
From: halligan@mediaone.net
Message-ID: <7490b6ed.0109170941.358afd44@posting.google.com>
Source record: 59746
Cross-posted to: rec.radio.amateur,rec.radio.scanner,alt.radio.scanner

For Sale: Realistic PRO-2004 Scanner with External HB232
computer-control interface. Pictures available on request. Detailed
information follows:

The Radio: Radio is in very good condition. It has been through
numerous modifications:

1. Full coverage restoration.
2. Increase from 300 to 400 channel capacity.
3. Capability of 36 independent "banks" of 400 channels each,
controlled by toggle switches in rear of radio. Only one 400 channel
"bank" can be
scanned at a given time but it affords for numerous different scanning
schemes selected by the switch positions.
4. Pushbutton control on rear of radio to select/deselect keyboard
beeps.
5. Removal of 120 volt power transformer to accomodate interface and
HB232 makings, radio runs on 12 volts only.
6. Front mounted large signal meter. Mounted to the left of the volume
control. As a result the headphone jack is not available.
7. FM discriminator tap on rear of scanner for data decoding.
8. Radio did suffer the infamous PRO-2004 "poor solder" syndrome and
has had such problems repaired.
9. Blue keyboard overlay exhibits 40 channel per bank setup.
10. LCD display is in good shape.
11. Radio has always been in an indoor environment; never used in a
mobile capacity.

The HB232 Interface: Mounted in 8"W x 6"D x 3"H project box. Connects
to radio through short DB25 male cable to DB25 connector mounted
vertically on rear of radio. Connects to computer via DB9 Female
cable. Original HB232 software burned onto CD will be included, as
well as the DEMO version of Redshift, a Windows 95/98/ME software
package for the 2004/HB232 combo.

Miscellaneous: PRO-2004 Owner's manual and PRO-2004 service manual.
Pictures are available on request and will be e-mailed to you
directly. Power supply is NOT included; I run the radio directly from
a custom power setup in my shack. There was never a "wall wort" type
supply included with this radio and as previously mentioned the 120V
transformer was removed to accomodate the DB25 connector and internal
makings of the HB232 interface. The power supply is a standard coaxial
type and is readily available for cheap $$ at Radio Shack.

Reason for selling: Not seeing much use in my shack these days; I'm gathering money for other radio purchases.

Price: $400 O.B.O., including UPS COD shipping.

Method of payment: Advance payment by POSTAL money order only, or UPS COD with POSTAL money order only.

Please do not reply here, if interested E-Mail me at halligan@mediaone.net

Thanks for reading.

Scott

Straw man arguments

5032. Cobra ESD 9200 detector false radar?

Newsgroup: rec.radio.scanner
Date: 2001-09-17 17:48:53 UTC
From: dannykewl@eudoramail.com
Message-ID: <88191b89.0109170948.49bc3145@posting.google.com>
Source record: 59648

Hi. I have a Cobra ESD 9200 radar detector which seems to work good except during the day when the sun is out. During this time, when I get on the freeway (city and suburban), my detector goes off with one after another laser alert.I don't know what lasr band, the manual says there's three laser bands, and everytime the "L" on the front of the detector lights up and I hear the same "phaser" sound. The manual claims there are no laser alerts. If I take the detector out of the bottom of the windshield, and put it up high, on a sunvisor, the laser alerts are at a minimum. I don't get the false laser alerts at night. I also tried the detector in several cars and vans and still get the false lasers, what could be causing this. I live in the Cleveland, Ohio area if this has any bearing. TIA. Sorry but this is the closest Usenet group I could find for this type of question, there seems to be no detector groups.

Dan

get a Uniden radar detector. laser is just a IR beam (Infrared). like what your video machine/satalite/tv remotes use. but on a different frequency. you could stick one of the tv or such remote in front of the radar detector and sometimes will go off. anyways. I had a old detector a year or so back and Laser used to go off due to ignition noise. was weird but true. other stupid radar detectors could make it go off too. I know a few in canada that buy the sopposedly best and or expensive ones. all most of them do is cause other detectors to be false detected. I do know cobra and BEL have a habit of making my and other unidens go off. but. sun shouldn't really do it.to my petite knowledge. try another detector and see. or return that one for a exchange if it is still new. just remember cops don't use laser in their car. and speeding IS stupid. cops use Ka or K in their car.

Who chose to attack us? That was our choice?

As a man not of the US, I guess it's to be expected that you will blame
everything on us. Understand this though, we don't have all the choices.
We didn't choose to be attacked and if it comes to world war three, your
(and every other) country will still have a choice to make...whether to join
us or oppose us.

Blues,
Dave
A man, with a child, who sadly believes that a massively violent response
against all terrorists and the nations who support them is the best way to
protect her freedom and future.

Mind if I step in here? (As the original poster...)

I am selling it because, quite simply, with two kids in college, I need
the money and already have another scanner that I listen to more. I
didn't realize that I was giving it away...I guess I thought 300 dollars
seemed to be what they were selling for, especially in really good
condition like this one is.

Let me repeat, it's a non-smoking, non-mobile 2006 with the cellular
modification, with antenna and manual.

Thanks,

David Baker

It sounds like you don't have the frequencies in the correct 'LCN' logical channel number order. They aren nececssarilly in frequency order. look for the agency in one of the web pages that publish that stuff. Here are a few.

Your price is fine. The guy who says you're giving it away is some idiot who has been quite unsuccessful (over several weeks) peddling his scanner for $500.

David,

Disregard the silly remarks form the other boobs here. $300.00 is a fair price for on ein the condition you've described. You should be able to sell it with no problem.
Dan

Both are on sale for $199. I want it for trunked freqs. The 94 is last yrs model...1000 channels but not computer conrollable or downloadable.
the 93 has 300 channel memory but is capable to be computer controlled and to have freqs downloaded. The 94 scans at a slightly faster rate.

Hi there....

Curious to is if anyone has found a good speaker for a hand held scanner.
Kind of like a shoulder speaker.

The one at radio shack sucks, and you can barely hear off of it.

Thanks

Why do you say this ? If the NSA did, indeed, monitor the traffic during this attack, do you really think they are going to release it to the news agencies and public ? Guess again..... NSA is one of the most secretive organizations in the world, and everything they gather is highly classified.... They have a built - in aversion to releasing monitored data.

I would put a 1N4003 back in. It has a higher current rating than the
1N4001.
If you use the 1N4001 and a 10A fuse, you'll fry the radio if you acidently
reverse
polority when connecting power...
And only use the reccomended fuse rating...

vvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvv
Please forgive the off-subject but we need more eyes
and ears out there than we ever did before.

Please consider joining the list and helping out.
^^

PA-SitRep
Pennsylvania [Emergency] Situation Report E-Mail List

The PA-SitRep mailing list is a free communications
tool that will enable you to monitor and report on
major emergency situations throughout the State of
Pennsylvania including weather emergencies,
natural disasters, environmental disasters, civil
disturbances and threats of terrorism.

The list is extremely low volume because messages to
the list are limited only to those containing verified
emergency situation reports of Major Import within the
State of Pennsylvania.

The list is run from a private server at my expense, so
there are no advertisements necessary or permitted.
Rumors, hearsay, unconfirmed and or inaccurate
reports and chat are strictly prohibited.

Subscribers do not have to be members of any
specific emergency services organizations to join
the PA-SitRep mailing list. ANYONE willing and
able to comply with the posting guidelines is
welcome.

The list protocol for posting messages is designed
to cater to those who use digital cell phones or
alphanumeric pagers for text messaging. The first
paragraph of the messages posted to the list are
brief summaries limited to 100 characters, followed
by a more detailed situation report.

For more information, or if you'd like to subscribe,
please visit the following web address:

http://www.pa-sitrep.com/pasitrep.htm

Thanks. And we'll look forward to your participation.

Somebody nice enough to rebroadcasts the transmissions that is all.
Don't forget. C.F.D. rebroadcasts their base to mobile dispatches on
their old Command Channel which was C.F.D.'s Channel #5. I forget the
exact frequency though. It was a midband V.H.F. frequency in the 150
- 160 megacycle range.
I do not know, for sure, if they still do this.
I thought that Mentor P.D. would have a Talkgroup on the Lake County
Motorola Type I Analoug Trunked System and not their own frequncies.

Former West Side OF Cleveland Resident. Now living in Strongsville.
Man I need to move back to where their is some life and activity.
There is absolutely nothing out here. I don't mean frequency wise. I
mean sociablly wise. All you have is that RIch Man's Mall. Good
grief.

I even have to get a trunked scanner just to listen.

Yes, but not on 125.125. I heard Bandsaw Lima and Bandsaw Mike last Friday
when the president was in town. Active freqs were 225.8, 271.0, 295.8.

I heard only one tactical VHF freq, which I don't have handy at the
moment. Possibly around 134 MHz.

Check the usual NORAD ("Huntress") freqs.

Hi Greg
No other purpose. The diode is there to prevent incorrect polarity connection. If you connected the power ie. +12v to -12v then without the diode serious damage to your scanner could occur. Your 1N4001 will be just fine.

Regards
Neville

If this was posted by answering a question on possibilities listening to scrambled/inverted transmissions this posting would be acceptable. Otherwise ALL commercial postings to newsgroups is spam and should be reported by many to the ISP.

There is software to do this inversion with a soundcard for FREE. Do a search on a programm named "invert". Works VERY nice. Have no URL at hand :-(

Message-ID: <tqfp5atbc2tlb6@corp.supernews.com>
Source record: 59693
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Anyone else seen a problem programming the AOR AR5000+3 antenna selection from the PC?? Works perfect from the radio, either manually or auto choice, with or without the AS5000 switch - so up to 4 ant can be controlled. But when using Butel memory manager, everything works great - except ant selection!!! It loads ok when toggling through the bank list on download, but after every channel, the antenna setting is kicked back to default "ant 1", then the next channel loads ok, ditto, ditto..... You can load a single channel ok via the virtual vfo, and it stays in memory like it's supposed to, and the last channel loaded from a bank download is good UNTIL you change something, then it too kicks back to ant 1. IF power is cycled after the last channel downloads, before anything else is touched, it is locked into memory, but only the last ch loaded..... Strange, er what????????????? Butel is working on it, too, but just wondered if anyone else has seen anything like this.....
Cheers n beers y'all..
Don

I don't even understand why the '93 is only a dual trunking scanner. RS already HAS a dual trunking scanner. I thought the new scanner would at LEAST be an 'upgraded' '92 multi-trunking unit, which apparently is not the case.

I looked at the radio on E-Bay, but this one confuses me.

This radio can be had used for $100 to $125 (and sometimes
much less) any day of the week. It also has 200 channels.

Why go to all the trouble to "convert" a BC100XLT?

Just curious.

5092. FOR SALE: UNIDEN BC 147XLT PROGRAMMABLE SCANNER

Newsgroup: rec.radio.scanner
Date: 2001-09-19 16:09:59 UTC
From: r8500@aol.com
Message-ID: <20010919120959.07024.00001489@mb-fo.aol.com>
Source record: 59608

Uniden BC 147XLT 16 ch. base/mobile programmable scanner in excellent working order. Covers VHF low, VHF high, UHF and T band. Features one touch weather channel access, priority channel monitoring, and individual channel lock out. Has a small bit of "sticky tape" residue on bottom corners but otherwise looks great. Comes with AC wall wart, telescoping whip antenna, and original box & manual. $25.00 plus shipping from zip 84404, and payment must be received within 10 days. David, R8500@aol.com.

5093. Re: need opinion on Rs pro94 vs new pro93 please

Message-ID: <3BA8C3DF.C9F9A2B7@worldnet.att.net>
Source record: 59609

And why in the world would they drop (as reported) CTCSS support?

And why in the world would they drop from 500 to 300 memory channels?

Looks like the PRO93 is just a dumbed down, cheapened down, scanner.
In no way a replacement for the PRO92.

Walt

I thought they were wefax. and I do know they aren't pagers cause of the data sound. It does remind me of fax. but wefax sounds different then this. The page that had these fax transmissionson is gone now. oh well. I may just post a smallpeice of wav. Just curios.since this is what ham/scanner hobby is. by the time I even thing I am getting reception. it changes frequency or phases bad. the images are nothing. oh well

You use PL tones only to lock out certain stations when more than one transmitter shares a frequency... for example, my local police here in north jersey use some of the same frequencies as the nassau county police on long island.

This causes interference, and so our police us a PL tone so that our cars do not have to listen to their transmissions all day. Our police desk transmits a PL tone so that our cars hear him.

Hope this helps... sorry but i have not details on the 32A

No. They are the last three digits/letters of civilian private aircraft. The last three are used to speed up radio communications. Thus, 90papa is used instead of something like november 56490 papa. Try saying that fast three times.

I have an old Uniden Bearcat 20/20 with a cracked circuit board... I fixed it once by jumpering the circuit traces with solder (Just a cheap, quick repair), and it worked fine for a while. Now it is intermittent again.. Would probably work if you soldered in actual wires across the broken traces, but I'm not going to bother with it... It is the display board that is cracked. I'm sure there are other circuits on that board as well, but I know for sure that it controls the display...

If you are interested, let me know by replying to the group...

Put the cock ring around the antenna outside. This should make the reception better all the time. By doing this, you won't have to stand around naked, in front of the window, touching the back of the scanner any more... Besides, I hear your neighbors are getting pretty disgusted by the site of your naked body anyway.. I think they would appreciate it...

A good scanner which supports CTCSS, like the PRO92, will display any
PL or DPL tone being received. You can then program the code into the
scanner.

Walt

PS: DPL is a digital code system sometimes used as an alternative to
the PL tone code system.

Message-ID: <3BA945CF.3AB6054E@worldnet.att.net>
Source record: 59629

Maybe you have the wrong PL tones?

Un-program all the PL tones you entered. Watch the display when a
transmission is heard, and, if the MODE is set to PL or DPL, the
correct PLtines'codes will be displayed. Watch for a long enough
period so you will catch ALL such tones/codes which are being used.

Also, the bank must be CLOSED if you expect a non-programmed tone/code
to be locked out. If the bank is OPEN, you will hear all such coded
transmissions.

Walt

Ok, so I got the voltage rating reversed with the current rating :-)
As a tech, I see what people put in their radios. Some guy even had a 30A
one time...
Also, I've worked on a few where people have hooked up 110vAC to the 12vDC
input - what a mess...

I'm just saying that he should use the the part that the manufacure
originaly had in...
otherwise, they would have put in a 1N4001 - had to be a reason...

Hey Guys

I'm not sure if this should go here but, I have a brand new Pro-94 for sale. It's A week old if that much, the scanner is in excellent condition, box, manuals, antenna. I'm asking for $150 Money Order only. I've done a few sales via the internet so I need a contact number to reach you. If you cant provide a number please don't read further. If you're looking for a great, clean scanner, with low usage please contact me at my email address so I don't take up bandwidth. If you're from New York City even better.

Thanks

I'm local to the NYC area, 12 miles west of Manhattan, and have heard what sounded like logistical support comms on 125.125, but only the first day or so subsequent to the raid. There is an obvious military presence in NYC airspace, most notable during hours of darkness when up to 7 aircraft (one heavy jet and 6 smaller ones) can be seen on clear nights engaged in constant airborne vigil, doing laps all night long. They are small and high, therefore, hard to see once the sky lightens-up in the morning.

God Bless Us All.

They have broken our hearts, but never our spirits.

AOR is twice the price, but twice the quality!! Elements are cut to cover a wider consistent bandwidth, not to mention at least three times the diameter which also helps for broader bandwidth, and comes with 50' of coax. AOR takes a TNC connector, while the R/S takes a PL-259 (I used an adapter on the AOR, since I already had coax ran, with a PL-259 on it). If you want the best specs on the AOR, and a accurate picture, go to www.aoruk.com. For some odd reason, 95% of the pictures shown around about show the 3000 looking like the atypical discone - it's not..
I have both, and the AOR consistently out performs the R/S most of the time, but some bands are a draw. For UHF >800 I have a home brew 5/8 wave g/p with 6' of coax, just sitting on top a bookcase, that waxes them both (a beam & rotor in the attic are next for uhf [:->)!

Chances are they could broadcast them in the 800 band, they might even
use a cell phone connection, which thakns to the CTIA, is illegal to
listen to.

Just as a warning, I believe that M.D.T.s are illegal to listen to
also.

If you do not hear any data type transmissions on there regular channel then they must use a differernet frequency.

Good luck

About a week ago, I visited the WPIX-TV website and sent them an
inquiry about their over the air transmissions (i.e., are they on the
air?, what location?, future plans, etc.). Below is the "reply" I
received today.

Dear Viewer,

Thank you very much for your email. We will forward your comment or
question to the correct personnel, and you may receive a response
should your email warrant. Unfortunately, we receive so much email
here at
WB11 that sometimes we can't get to responding to it all. So, if you
don't
hear from us, it doesn't mean we're ignoring you, it just means we're
busy
taking care all of the things about which viewers have written.

Thanks again, and write back whenever you feel like you have something
to say.

Yours,
WB11

I am looking for a handheld scanner for use in the San Francisco, California area as an emergency radio. Specifically, I'd like coverage of the police & fire frequencies (do they use "trunking??" do I need this feature?) and the AM/FM commercial broadcast bands. A big plus would be coverage of the HF bands for BBC coverage and/or commercial broadcast TV Audio.

Any recomendations are appreciated :-) Also, are there other bands or features I should look for? Are there any sites with table comparisons of different models of scanners?

Thanks again,

Eric

5139. NJ State Police & 245xlt ??

Newsgroup: rec.radio.scanner
Date: 2001-09-20 21:37:38 UTC
From: tbone107@aol.com
Message-ID: <20010920173738.02159.00000275@mb-da.aol.com>
Source record: 59555

Thanks for reading. I'm looking or help getting my BC245XLT to RX the NJSP, not all barracks, just the Totowa barracks for I-280 and the Bloomfield barracks for the Garden State Parkway. The NJSP are on an 800 trunked system, the scanner is new, and I miss the old days of "program and listen"...this TrunkTracking stuff has me dazed and confused. I'm a PO in a nearby municipality through which both 280 and the GSP pass. Also, one neighboring town went to 800 trunked, and they visit quite often, unfortunately they get lost because the fun-loving children in my town have swiped a lot of the street signs, so when they call for help, it would be nice to hear them too. I've always like the heads-up of knowing what they have coming our way, and I finally stepped-up from my 100XLT to the 245. The frequencies are known, but all this talkgroup and fleetmap stuff has me feeling like an idiot. Anyone with programming help and an anti-idiot solution is very much appreciated.

Thanks,
Tom KB2FIK

This has been extensively discussed here before. Quite recently in fact.

Briefly, anything that isn't explicitly approved by the airline or by the
FAR is banned. Here's the relevant reg:

TITLE 14--AERONAUTICS AND SPACE

PART 121--OPERATING REQUIREMENTS: DOMESTIC, FLAG, AND SUPPLEMENTAL
OPERATIONS

Subpart K--Instrument and Equipment Requirements

Sec. 121.306 Portable electronic devices.

(a) Except as provided in paragraph (b) of this section, no person
may operate, nor may any operator or pilot in command of an aircraft
allow the operation of, any portable electronic device on any U.S.-
registered civil aircraft operating under this part.

(b) Paragraph (a) of this section does not apply to--

(1) Portable voice recorders;

(2) Hearing aids;

(3) Heart pacemakers;

(4) Electric shavers; or

(5) Any other portable electronic device that the part 119
certificate holder has determined will not cause interference with the

navigation or communication system of the aircraft on which it is to be used.

(c) The determination required by paragraph (b)(5) of this section shall be made by that part 119 certificate holder operating the particular device to be used.

[Doc. No. FAA-1998-4954, 64 FR 1080, Jan. 7, 1999]

This by the way is from http://frwebgate.access.gpo.gov/cgi-bin/get-cfr.cgi?TITLE=14&PART=121&SECTION=306&YEAR=2000&TYPE=TEXT , just in case anyone wants to make sure that I'm not making this up. If you want to see more context, try this link: http://www.access.gpo.gov/nara/cfr/waisidx_00/14cfr121_00.html and click on the "121.306" link from there.

Now the logic there is a bit tricky. Paragraph (a) starts out by banning ALL "portable electronic devices" (PEDs). Then paragraph (b) allows a few explicitly, and then adds clause (b)(5), which allows the "part 119 certificate holder" to add things to the "approved" list.

The "part 119 certificate holder" is the airline -- see http://www.access.gpo.gov/nara/cfr/waisidx_00/14cfr119_00.html (that's part 119).

So, unless the airline you're flying on explicitly states that the gadget in question is ok to use, it isn't.

(Airborne cellphone use is ALSO banned by FCC regs, because it MAY cause problems for the ground-based part of the system... which assumes that if you're in one cell you're rather farther from other cells, which can therefore reuse the same channel you're on. The fact that cellphones do occasionally work from the air does not prove that they always will or will never cause such problems.)

Now. Until recently, at least, Delta specifically approved the use of both VHF scanners and GPS receivers -- see http://www.delta.com/travel/trav_serv/bag_info/Portable_Electronics/index.jsp .

The last time I flew on US Airways, they allowed them also, by exclusion: Their inflight mag said that you couldn't use portable TVs, radio transmitters, or remote controlled toys, but that:

"other portable electronic devices may be used except during taxi, takeoff, and landing, when they must be turned off and properly stowed. In addition, cellular telephones may only be used while the aircraft is parked at the gate and must be stowed for taxi."

I can't find their PED rules on their web site. I suppose I could scan and post the relevant page from the inflight mag...

I swear that I remember seeing a provision allowing scanners in Alaska Airlines's inflight mag, but I haven't found it (nor any statement at all about PEDs) in there recently. It might have been on the late, lamented Reno Air.

Most other airlines I've been on seem to be more restrictive, listing radios and sometimes even explicitly mentioning scanners in their "banned" list.

So, where does this leave you? You may not have "heard" that these things were banned, but that doesn't mean anything -- if an airline doesn't want to allow something, they don't have to say it is NOT allowed; all they have to do is NOT list it as "allowed to be used".

AA recently (no, not within the last week) added GPS receivers to their "explicitly banned" list, not that that was legally necessary, but I guess the FAs needed a bit of printed word to point to as authority when passengers tried to claim "it's not a radio".

The "reason" might simply be "we got a great deal on these 1N4003's in
production quantities, so that's what we used." That sort of thing
happens all the time.

get a hold of winScan for the 245xlt. it will do it for you.
then you get great stuff to play with and look at and then you can even talk to it with it's "remind me I'm blind" soft-ware will come in Handy. get it? Handy?

oh i/m on a roll....

Home - About Motorola - Products and Services - Shop

Updated 20 September 2001
All of us continue to be deeply affected by the tragic events of September 11. Nevertheless, it is critical that we help each other get through this tragedy and help the world recover.

Motorola Emergency and Customer Response

Motorola is continuing extensive efforts to globally expedite new shipments and meet numerous customer requests for emergency help to support police, fire, ambulance and other emergency services in the affected areas.

Motorola business and logistic teams and manufacturing facilities worldwide will remain on full alert and will continue to give priority to public safety emergency orders as needed.

To date, Motorola has delivered at least 86 trucks with communications equipment to field teams and customers in the New York City area, Virginia and Maryland. In addition, seven planes carried Motorola equipment into the affected areas at the height of these disasters.

Additionally, three major communications systems were delivered, including a 900 MHz ï¿½trailerï¿½ radio system and an 800 MHz ï¿½trailerï¿½ radio system in New York City, and an 800 MHz ï¿½trailerï¿½ system which is being used at the plane crash site in Pennsylvania. A fourth major system, an 800 MHz, 15-channel communications system, was delivered to New York to provide back-up communications for emergency services. Motorola workers produced the system, which typically takes about three weeks to assemble, in 30 hours for shipment to the emergency areas.

Approximately 9,500 of our portable radios, 16,000 batteries and 3,000 chargers have been delivered so far. Further, about 120 base stations, and nearly 5,000 pieces of miscellaneous accessories, such as cabling and antennae equipment, have been delivered. Motorola has also delivered 700 Iridium satellite telephones to emergency agencies in the New York City area. We also provided 1,000 cellular

phones to a major insurance company for its policyholders in the affected areas.

Motorola has also donated 10,000 iDEN multi-function phones to various federal, state and local government agencies, plus about 88,000 batteries, chargers and other accessories. Nextel will provide the phone service.

The Motorola Foundation will donate $1 million in support of relief efforts, dispersed to: New York Police, Fire & Rescue; the Federal Employee Education and Assistance Fund (World Trade Center / Pentagon Fund); General Relief Fund in New York; Abilities, Inc.; and Employee Match to the One Motorola Responds Fund.

We all have the opportunity to redefine what it means to be heroic. We must focus our energies on collaboration and reconstruction. We need heroes and heroines of epic proportion working to strengthen the world one step at a time.

FOR IMMEDIATE RELEASE

September 17, 2001

BROADCAST ELECTRONICSï¿½ EQUIPMENT BEING
USED
IN SEARCH FOR WORLD TRADE CENTER
SURVIVORS

After receiving a call from Motorola to assist in the rescue mission at the World Trade Center, a team of engineers led by Jerry Westberg modified a BE AM-500A this past Friday evening, September 14, then drove it to Motorolaï¿½s facility in Chicago late that night.

This highly modified broadcast transmitter retuned to a VLF frequency is being used to search for trapped survivors/victims at the WTC. Keep in mind, this is VERY experimental and is one of several other options being used. (A couple hams thought this up....)

All WTC employees received smart cards last August, which operate on some VLF channels. Normally, the wall packs emit only a few mW of power at 125kHz to reach the card at a distance of one foot to three feet, and the smart cards emit a code back at 187.5kHz.

The theory is the higher power transmitter will allow that signal to penetrate the rubble and activate those cards that are in the rubbleï¿½either in the pocket/purse of the holder or their desk. Another experimental high sensitivity receiver and loop antenna will be used with the decoder to listen for the cards and pinpoint their location. Digging can then focus on that area first.

It is estimated that the system can see a card through several layers of walls and floor decks. More testing is being done.

As of 10:00 AM this morning, Motorolaï¿½s corporate jet flew the transmitter to Motorolaï¿½s facility in New York, where it will be demonstrated for the Port Authority. They hope to have the transmitter at ground zero by this afternoon. If one person is found alive as a result of this, all the hours

of hard work that were put in will be far beyond well worth the effort.

This technology could be a possible breakthrough in general for search and rescue missions where the cardholder is not visible, but near by (i.e. - lost at sea, in a forest, smoky fire, building failure, landslide, flood, earthquake, mine collapse...etc).

About Broadcast Electronics

Headquartered in Quincy, Illinois, Broadcast Electronics, Inc. is a global leader in the design, manufacture and sales of broadcast studio systems, radio frequency (ï¿½RFï¿½) transmitters and remote broadcasting equipment for the worldwide radio market. The company was founded in 1959 and has been a pioneer in the development of many leading technologies for the radio broadcast market.

Hi Maz,

That HPF sounds like a possible solution. Do you know if there are any plans/calculations online for such a filter? I would like to build one myself, so that I can also experiment a little bit.

I've built filters with OPAMPs but this was just for LF applications and is of course not applicable to HF filters.

Cheers,
/Marc

The reason is that 50 volts is too low for a 12 volt automobile.
Intel describes The Automotive Environment in their application note:
AP-125. Transients up can be 200 volts and more.

See:
http://www.tiac.net/users/rdh/http/Urq/rt02.txt

Do you really think it would be worth the trouble? Do you want to do this because your PC is not close to a telephone jack? If that's the reason, there are other ways of getting a connection from here to there. I suspect it wouldn't be all that reliable or secure either.

I bought it from some dude on eBay and that's as much information I
have. If you do a search on eBay for completed items you can see that
others have sold as well. I'm not sure how he did it, but he did it.

Message-ID: <TGOq7.240$wF5.163990@newsfeed.slurp.net>
Source record: 59578

I posted this @ other newsgroup and didn't get a response
so I thought I'd give this group a try.

I have a BC780XLT Trunk Tracker III digital scanner and am
trying to listen to fire, rescue, and state police. I can listen to
some conversations on the scanner but in the middle of the conversation
they switch and go elsewhere. Can someone give me some tips.
I'm mostly interested in the state police. I can't figure out why I
can here the dispatchers and not the car. The local troopers
headquarters is in Raybrook NY.

Thanks
jim

Don't think that's new video, think they have been showing that film about as long as Bin Laden has been making headlines. I've noticed that antenna in the past. Suspect it's low vhf but also suspect he changes frequently.

Does it actually receive anything in the 800 MHz range? I mean making it scan that range may be easy, however actually hearing something and knowing it is an actual 800MHz transmission is quite another thing.

if you do, do it. you may be able to make it like a wireless network in a way. but you may be able to do it. may have to open up the bandwith a bit. and such. but. never know. try it and see. I know the before modems were very popular. I know you were able to use your ear piece and mic for rx and tx. but max bandwidth was 2400 baud. maybe if you found a discriminator point. I forget what the other word is for discriminator tap. for the rx. and un filter the mic. you may get faster speed.

2 problems
1. sounds like they are on a trunking system. my trunking scanner has to be programmed for the trunking system I want to hear. It was more trouble to program than I cared to invest. Check your manual.

2. dispatcher may be closer and/or transmitting at higher power than mobile units.

Loks like an ICOM, or a GE Portable he's using, to me.

Maybe 800 MHZ Freq., as in FROM 800-806, Public-Service band, not reachable, thru most scanner/Receivers,BUT THAT WOULD BE LOCAL, I.E., MOUNTAINS in afghanistan, or--->

Lower Band, for Distance...., perhaps a Military 30-32 MHZ., in 20 or 40 khz. stepped Frequencies, for Longer distance(s)!

I have the PRO91 also. Works great but I could have saved some money and got a non trunking unit. We have trunking systems being used here in St. Louis but it's a major pain to program so I don't use it. Don't spend the money for a trunking unit unless you are into this hardcore. I'm more of a casual listener.

(for Charleston, SC).

Subscribe to the Charleston-Scan list on Yahoogroups.com. You'll find frequencies / talkgroups / information for the city, county and SCANA trunked systems and sites.
Some of the members are mil-air enthusiasts, and there is also information on Beaufort NAS and Charleston AFB.

Paul is the Charleston-Scan list owner. His personal site has alot of the information above, including a link to subscribe to the list:

http://www.webgroomers.com/chs-scan/index.html

I can receive plenty of short wave with the RS center-loaded telescopic whip (20-006) and with some different dipole and long wire setups with my Yaesu VR-500. I have also used it to decode amateur RTTY using the sound card with a long wire antenna. If short wave is your real interest, the VR-500 is NOT the best choice, but it receives about as well as my Grundig Porsche shortwave radio, and it offers the flexibility for both different antenna arrangements, it has an attenuator function for when you're using long wires, and it has very fine frequency resolution (down to 50 Hz steps), SSB decoding and a CW filter for listening to the HF amateur activity. The IC-R2 doesn't do SSB, but it's a lot cheaper and an excellent radio overall.

Not only did the FCC make it illegal but you can't buy a radio in the US capable of receiving cell freqs unless you have a special permit. But they are sold in other countries around the world.

From what I understand, Ebay doesn't allow modified or modifyable radios to be auctioned as well.

Quite frankly, phone conversations are mostly boring but about 12 years ago I heard this hot little neighbor gal next door to me having phone sex. It was pretty intense.

Get or build a pbx simulator if you want to simulate dial tone but it's not necessary as modems can be programmed to blind dial. All you really need to do is simulate the 9vdc off hook voltage. A 9v battery works well for this.

exactly what he said. in canada it is not illegal to listen. once you tape.
you need permission form both parties. recording I think is almost the same
law everywhere. but listeningmay be different.

so what are you talking about. cordless or cell. you were saying cells are illegal. but you listen to cordless ? I am lost on your post. but. EBAY will not even allow canadian radios. Some loser from one of the news groups told ebay about my pcr-100 being canadian and what that meant. They deleted it right away. Move to a true free country if you want to listen to anything you want. except decoding encrypted signals.

From: David Trickle <gumby1@core.com>
Message-ID: <3bacf9ee$0$93671$272ea4a1@news.execpc.com>
Source record: 59537

I have a BC200XLT that scans Ok. I can input Frequencies OK. If I turn the squelch control I can hear the noise. I can not receive my local traffic. The PD and Fire are in the 155 Mhz range (of cource). I hear nothing. Another scanner right next to it will pick up these frequencies. I have put the scanner in the test mode so some channels have weird frequencies in them and I have heard squelch on a few of those channels and at one time I even heard a voice. What should I be looking at. I do have the schematic and I do know a LITTLE about electronics. Please do not refer me to the online tips for the BC200XLT.I have read them all. The problem with the loss of audio and dial lamp (Q201 being the problem) is not the problem. I have audio and the back light works. If you have any ideas drop me a message. If you would like to e-mail me feel free. dtrickle@coredcs.com Thanks for at least reading this message.

5222. FS: ICOM IC-R100 COMMUNICATIONS RECEIVER

I have for sale a mint Icom IC-R100 Communications Receiver. This radio has never been mobile and I am a non smoker. I have the box, owners manual, sales brochure and all included standard accessories. The R-100 covers 0.1-800MHz in the AM, FM and FM wide modes.
I am asking $425.00 plus shipping from 48026.

TITLE 47--TELECOMMUNICATION

CHAPTER I--FEDERAL COMMUNICATIONS COMMISSION

PART 15--RADIO FREQUENCY DEVICES--Table of Contents

Subpart A--General

Sec. 15.9 Prohibition against eavesdropping.

Except for the operations of law enforcement officers conducted
under lawful authority, no person shall use, either directly or
indirectly, a device operated pursuant to the provisions of this part
for the purpose of overhearing or recording the private conversations
of others unless such use is authorized by all of the parties engaging
in the conversation.

This would appear to be a sweeping rule, however several States have wording in their laws that amend this FCC Ruling by giving provisos. For the State of Oregon, that proviso is that Oregon is considered a One Party State and is defined as meaning that only ONE of the participants of a phone call must acknowledge and give consent to recording of the conversation, generally conceived as the party placing the call, as opposed to a Two Party state in which all participants must give consent. In this case, the FCC Law regarding eavesdropping is only enacted if NEITHER party is aware of taping or if the phone call crosses state lines in which case the stricter of the states through which the call is conducted becomes jurisdictional. In Oregons case, a 1968 and 1979 law claim the State of Oregon is an ALL Party state meaning all parties must give consent, however in 1999 this ruling was overturned in the Supreme Court of the State of Oregon in Salem, Oregon as being a violation of the State Charter. In any event, in several court cases regarding taping of phone calls (WestLaw), the court found that for the party initiating the call, no law exists to prohibit that party from taping the conversation provided it is local within the state, while at the same time stating that the receiving party must give information stating that the call may be monitored. This covers all hard wired and wireless telephone devices only.

This next section speaks specifically to the manufacture, sale, or modification of scanning receivers as it relates to cell phones. Note that it specifically calls out the receiver manufacturing specifications as it relates to the ability to modify by a user. Nowhere does it make statement that a user may not listen to cell phone calls using older receivers that are able to scan those bands. In these instances, I would agree that FCC 15.9 (above) would apply due to no party involved in the call being made aware. This would certainly constitute a violation of Federal law in this case. However the point being made is that the FCC does not make law regarding the use of existing scanners that do not have those bands blocked prior to establishing new build regulations. Therefore, while it is not illegal to use a scanner that can scan cell phone bands (pre-existing devices only, not modified) it IS illegal under Federal and FCC law to TAPE the call if NEITHER PARTY of the call is aware.

In that respect (scanners) I was incorrect; nonetheless, in the State of Oregon, as long as the party intitiating the call is the one who does the taping, it is legal without informing the receiving party. Any attorney will verify this.

On the same note, using sweeping statements such as "You don't know what you're talking about" is a generality that is offensive. My business is a recognized FCC Compliance Facility which means we conduct FCC testing on various devices for industry compliance and are ourselves required to complete and pass rigid FCC Technical Expertise Compliance Testing on an annual basis. This does not cover FCC Consumer Use Law. Obviously, we must know something about what we're

talking about. Next time, try using "you're wrong on this one"
instead. We all make mistakes, that doesn't mean we have zero
knowledge about the topic.

TITLE 47--TELECOMMUNICATION

CHAPTER I--FEDERAL COMMUNICATIONS COMMISSION

PART 15--RADIO FREQUENCY DEVICES--Table of Contents

Subpart B--Unintentional Radiators

Sec. 15.121 Scanning receivers and frequency converters used with
scanning receivers.

(a) Except as provided in paragraph (c) of this section, scanning
receivers and frequency converters designed or marketed for use with
scanning receivers, shall:
(1) Be incapable of operating (tuning), or readily being altered
by
the user to operate, within the frequency bands allocated to the
Cellular Radiotelephone Service in part 22 of this chapter (cellular
telephone bands). Scanning receivers capable of ``readily being
altered
by the user'' include, but are not limited to, those for which the
ability to receive transmissions in the cellular telephone bands can
be
added by clipping the leads of, or installing, a simple component such
as a diode, resistor or jumper wire; replacing a plug-in semiconductor
chip; or programming a semiconductor chip using special access codes
or
an external device, such as a personal computer. Scanning receivers,
and
frequency converters designed for use with scanning receivers, also
shall be incapable of converting digital cellular communication
transmissions to analog voice audio.
(2) Be designed so that the tuning, control and filtering
circuitry
is inaccessible. The design must be such that any attempts to modify
the
equipment to receive transmissions from the Cellular Radiotelephone
Service likely will render the receiver inoperable.
(b) Except as provided in paragraph (c) of this section, scanning
receivers shall reject any signals from the Cellular Radiotelephone
Service frequency bands that are 38 dB or higher based upon a 12 dB
SINAD measurement, which is considered the threshold where a signal
can
be clearly discerned from any interference that may be present.
(c) Scanning receivers and frequency converters designed or
marketed
for use with scanning receivers, are not subject to the requirements
of

paragraphs (a) and (b) of this section provided that they are manufactured exclusively for, and marketed exclusively to, entities described in 18 U.S.C. 2512(2), or are marketed exclusively as test equipment pursuant to Sec. 15.3(dd).
(d) Modification of a scanning receiver to receive transmissions from Cellular Radiotelephone Service frequency bands will be considered
to constitute manufacture of such equipment. This includes any individual, individuals, entity or organization that modifies one or more scanners. Any modification to a scanning receiver to receive transmissions from the Cellular Radiotelephone Service frequency bands voids the certification of the scanning receiver, regardless of the date
of manufacture of the original unit. In addition, the provisions of Sec. 15.23 shall not be interpreted as permitting modification of a scanning receiver to receiver Cellular Radiotelephone Service transmissions.
(e) Scanning receivers and frequency converters designed for use with scanning receivers shall not be assembled from kits or marketed in
kit form unless they comply with the requirements in paragraph (a) through (c) of this section.
(f)(1) Scanning receivers shall have a label permanently affixed to
the product, and this label shall be readily visible to the purchaser at
the time of purchase. The label shall read as follows:
WARNING: MODIFICATION OF THIS DEVICE TO RECEIVE CELLULAR RADIOTELEPHONE SERVICE SIGNALS IS PROHIBITED UNDER FCC RULES AND FEDERAL LAW.
(2) ``Permanently affixed'' means that the label is etched, engraved, stamped, silkscreened, indelibly printed or otherwise permanently marked on a permanently attached part of the equipment or on
a nameplate of metal plastic or other material fastened to the equipment
by welding, riveting, or permanent adhesive. The label shall be designed
to last the expected lifetime of the equipment in the environment in which the equipment may be operated and must not be readily detachable.
The label shall not be a stick-on, paper label.

I am looking for active military freqs in the SE TX area.
Mostly ones related to "Homeland Defense".
I live near Houston,TX(75 miles East of) and have a hard time picking up Ellington ANGB. I have also tried the usual military UHF aero freqs, but don't hear anything.
PLEASE tell me some ACTIVE frequencies I can program into my scanner and listen to.
Thanks.

5232. 900 Mhz Cordless Phone Freqs

Newsgroup: rec.radio.scanner
Date: 2001-09-23 03:38:23 UTC

Source record: 59448

Can someone tell me the rest of the freqs for the AT&T model 9311 900 Mhz cordless phone? Preferably the base frequencies.
I just recently bought this phone brand new and searched the 900 Mhz CT band w/ my scanner and have the first frequency. Of course I didn't want to fool around w/ using my scanner to find the other 29 freqs!
Please help.
Thanks.

OK...SOME ADVICE FOR YOU, FIRST!

BEARCAT'S ARE "NOT" SCANNERS.., THEY'RE TOYS!!

IF YOU WANT A RELIABLE SCANNER, BUY YUPITERU, AOR, EVEN EARLIER VERSIONS OF
RADIO-SHACKS, ARE BETTER THAN BEARCAT GARBAGE!!

SECONDLY:
BEARCAT
'S SUFFER FROM 'HORRIBLE' SIGNAL OVERLOAD

THIRD:

THROW THE BEARCAT AWAY..PUT IT ON EBAY FOR SALE.., BUT GET A 'REAL' SCANNER..,
ORRY JUST MY EXPERIENCE!!

| "Josey" <joseyrose1@yahoo.com> wrote in message
| news:kCMo7.38530$i96.1237774550@newssvr15.news.prodigy.com...
|
| The September 18, 2001 Los Angeles Times had information that no other "newspaper" has
| yet reported.
|
| "Mexican immigration officials said they had taken into custody a man identified as
| Abdel Salem Imal, 26, near the Piedras Negras border crossing (about 100 miles
| south-west from San Antonio) for carrying apparently false identification indicating
| Brazilian nationality. Police searching Imal's baggage became suspicious after finding
| telephone numbers for Afghanistan, New York, Canada and Germany and separate
| identification showing a different name, Imad Mohammed Abed."
|
| http://www.latimes.com/news/nationworld/nation/la-000074973sep18.story
|
| The reporting of news about who the FBI is seeking and where they came from has been
| something worse than sketchy. That shouldn't be a surprise as these facts are directly
| at odds with the policy of the American two party fraud that has been perpetrated upon
| the American people. If the truth of how these animals got into the country is ever
| focused upon the "open borders" policy that has invited the world to invade will have
to
| end. This would also end the central long term goal of the shadowy "New World Order"
| that was proclaimed by George Bush Sr. back in 1991.
|
| There is further evidence of a possible Mexican entry by the terrorists as well. The
| same Los Angeles Times article reports the arrest of two others in Dallas:
|
| "The FBI office in Dallas reported Monday that two men, Mohammed Abdo and Anwar Al
| Marabi, were arrested over the weekend on immigration violations and were now being
| questioned in connection with the attacks."
|
| Of course no further information is available and you'll have a frustrating time
| locating even this scrap of fact if you look somewhere other than the Los Angeles
Times
| (which did not give any notation as to the geographical proximity of the largely

unheard
| of border crossing known as "Piedras Negras" to San Antonio). However, there was an
| article on the 18th of September in the Washington Post by Mary Beth Sheridan. This
was
| about U.S. Immigration policy and was less than favorable toward the backlash that may
| be coming, but which the Post, Times (both L.A. and N.Y.) and the bogus flag waving TV
| media are profoundly opposed to. Let's examine some of the nuggets of wisdom culled
from
| this piece:
|
| "Fifteen of the 19 hijackers came into the country on tourist or business visas,
| according to the U.S. official who did not want to be identified. Also, at least one
of
| the terrorists entered on an M-1 vocational-training visa, apparently to attend flight
| school, the official said. There was no information on how the other three arrived.
|
| FBI Director Robert S. Mueller III told reporters last week that some of the hijackers
| were "out of status," a phrase meaning that they had either stayed beyond the limits
of
| their visas or sneaked into the country. He provided no further details.
|
| In addition, 49 people who are related in some way to the investigation are in custody
| for possible immigration violations, the Department of Justice announced yesterday.
|
| "We're going to have to do a better job of making sure we know who comes into the
| country, how long they're supposed to be here and whether they've left or not," said
| Rep. Lamar S. Smith (R-Tex.), a member of the House immigration subcommittee.
|
| In addition, he said, Congress needs to improve the system to ensure that visitors
| eventually return home. He noted that about 40 percent of all undocumented immigrants
| are people who came to the United States with visas but didn't leave when the visas
| expired.
|
| The number of people entering the United States to study, visit or work for short
| periods has soared in recent years. From fiscal 1981 until 1998, the latest data
| available, the number of annual admissions of visitors with visas nearly tripled to
| about 30 million, according to INS data."
|
| http://www.washingtonpost.com/wp-dyn/articles/A46769-2001Sep17.html
|
| Clearly the entry point in the future for these monsters of Islam will be through
| Mexico. Canada will tighten up its immigration laws in light of what has happened
| whether that is from domestic embarrassment or pressure from Washington. Mexico though
| cannot do anything about who gets into their country. This "Abdel Salem Imal" would
not
| have been detained if not for the world wide scale of revulsion and the high level of
| consciousness that exists about the attack. Mexico is so ridiculous that a factory
| worker in an "American" automobile assembly plant that once paid American workers $30
an
| hour now pays Mexicans $5 per DAY. A police officer in Mexico does not make anymore

than
| that and most make less. Under normal circumstances this "Abdel Salem Imal" could have
| given the immigration police there (probably making $20 per WEEK!) the equivalent of
$5
| and been on his way to America. These terrorists were paying $15,000 each to learn to
| fly a plane plus their rent in nice middle class enclaves throughout America, all this
| while not working a job to pay for any of this. Mexico is much cheaper to live.
| Assembling "safe houses" and erecting an "underground railroad" through Mexico to
| America is relatively simple and quite cheap for these wealthy, sophisticated
characters
| that are willing to work fulltime to make themselves into a human missile.
|
| America may secure its airports to the point where this cannot happen again but these
| terrorists will not go home or stay there because they cannot steal a jet plane. The
| truck bomb that destroyed the Federal building in Oklahoma City is thought to have
cost
| less than $5,000 to assemble. That is one third the cost of training one human missile
| to fly a jet plane. Imagine two hundred of these guys each driving a Ryder truck into
| several American cities next September 11, 2002? The last truck bomb detonated in the
| now obliterated World Trade Center almost took it out. Imagine four Ryder trucks
rolling
| into an underground garage, one loaded with the ammonium nitrate explosive and the
other
| three loaded floor to ceiling with 55 gallon drums of gasoline. The first truck parks
in
| the center on the top floor of the garage just underneath the first floor of the
| building. The other three trucks then park along side the bomb and one behind. They
then
| gather together like four musketeers for Islam, yell "God is great!" and boooom! A
| wicked, life destroying ball of fire goes straight up through several floors of the
| skyscraper and likely three hours later the building collapses with most people still
| trapped inside.
|
| Sure there is a little wooden gate and a couple of "security" guards at the entrance
to
| the garage but is that going to stop four guys trying to blow themselves up?
|
| It is also important to remember that this is the most rudimentary bomb that could be
| assembled and these individuals have much better capabilities. Many have enough
| education to manufacture a large quantity of C-4 plastic explosive and to acquire
| flammable materials that produce temperatures several thousand degrees higher than
| gasoline or jet fuel.
|
| What about biological agents and nerve gas? These are things which are not beyond
their
| capabilities to produce.
|
| In short, if they can get into America and stay here for months or longer than they
will
| strike again in the future. It is no longer theory, they now have experience. Close

```
the
| border with Mexico, seal it with troops or there will be more lethal incidents in the
| future.
|
|
|
```

The CFR is all very well, but it's not the law that prohibits cellular and
cordless listening in the US.

You want 18 USC Sec. 2511, the Electronic Communications Privacy Act, which
directly prohibits monitoring cellular, cordless, and some other things.

See: http://uscode.house.gov/usc.htm for a searchable version of the USC.
Search on electronic and communications and privacy and cellular, or just
directly search for title 18, section 2511.

The FCC regulations are simply implimentations of that act, to stop you from
manufacturing a receiver that is designed to monitor cellular.

Yes, the FCC has clarified that 'modifying' a scanner to receive cellular is
'manufacturing' within this rule, and a violation.

If you read it carefully, you'll see that it specifically details that
USE of the content is illegal, not merely listening in, so I'll say
once more, it is not illegal to listen. Qualifying that, it IS

illegal to convey the content in any manner.

EEng.

There are many ISPs and newsservers who are not supporting binary groups at all
because of too much traffic they have to pay for. So all 3 newsservers I have
access to do not support any binary groups :-((

I have a like new Sangean 505 Shortwave radio that I would like to swap for a Radio Shack Pro 60 hand held scanner. Will also consider swapping for other hand held scanners.

The 505 is like new with all original accessories - manual and carrying case. It will be shipped in the original box.

Some of the features of the 505 - 45 memories, 18 SW, 9 MW, 9 FM, and 9 LW. BFO for listening to ssb transmissions. Lighted display, dual clocks, 1 kHz tuning, tuning knob, seek and scan tuning, and FM stereo. Uses 4 XAA batteries which last forever.

For a review of the 505 go to: http://www.rnw.nl/realradio/ats505.html

I have a like new Sangean 505 Shortwave radio that I would like to swap for a Radio Shack Pro 60 hand held scanner.
Will also consider swapping for other hand held scanners.

The 505 is like new with all original accessories - manual and carrying case. It will be shipped in the original box.

Some of the features of the 505 - 45 memories, 18 SW, 9 MW, 9 FM, and 9 LW. BFO for listening to ssb transmissions. Lighted display, dual clocks, 1 kHz tuning, tuning knob, seek and scan tuning, and FM stereo.

For a review of the 505 go to: http://www.rnw.nl/realradio/ats505.html

I picked up one of these antiques at the auction yesterday- probably paid too much, but that is a different sob story.

Anyway, RS's web page for manuals is down for the last day, at least, and I am itching to try it out. Before I spend too many hours trying to reverse-engineer how to program it, does anyone have a pointer to a FAQ or mirror site with the steps?

Replies via e-mail also, please- my newsfeed is less than reliable.

You will find very few cell capable receivers for sale in Canada! Yes it's illegal to listen even here in Canada. The law however is somewhat in a grey area here. Frankly if listening to other peoples' cell calls do something for you then go ahead. As long as you don't record and use the info for some sinister purpose, no one will be the wiser. Eventually all cells will be digital and no one will be able to decode them unless someone comes out with a decription algorythm. But with all the different companies out there, it may be difficult to stay on top!

I have had good results using a cellular phone articulated stalk type of mount. Just attach the bracket that came with the scanner to the top bracket of the phone mount then screw the phone mount to the floor. After that just use the adjustment points on the stalk to angle the radio to a convenient viewing position.

Regards
Mark

Eric,

Given your specific requirements, you need a Storm Tracker scanner -
For anyone who travels the roads, getting up to date weather and
highway information is crucial to your safety. This scanner (from
Uniden Bearcat) is pre-programmed with 1,583 frequencies covering all
50 states and Canada. Continually scan all seven NOAA weather
frequencies, local police and highway patrol, local news media
coverage, and D.O.T. coverage. With its priority scan feature, you?ll
be alerted to transmissions (via an audible and visual alarm) from
"mobile extender" radios in highway patrol vehicles, regardless of
what form of speed monitoring they?re using. With the severe weather
alert, you?ll know ahead of time if there?s any impending weather in
your immediate area. Interested in traffic reports? Monitor news
frequencies to hear traffic information between radio updates. Bad
winter weather? Listen to state road repair, snow clearing and weigh
station crews for the trouble spots that may lie ahead. The unit
includes a "quick-clip release" dual suction windshield mount,
cigarette lighter adapter plug, hard-wired power cord, 360 degree high
gain flexible rubber antenna and window mount antenna for extended
range.

Hi all.
I am looking for a decent small size Marine radio that I can use on my aluminum boat.I don't want an ht,as I already have one.I want a mobile style and looking for one that is cheap or you no longer need.The ht one I have is more of a nuisense and gets in the way most of the time.Let me know what you got and your best deal shipped to 01930.Thanks for any help.

You clearly have no idea what you're talking about. EBay routinely has
sellers remove cell-phone capable radions from auction.

Here is what they say in their seller policy:

"Scanners - Generally, scanning receivers and radios may be listed on eBay.
However, you may not list any scanning receiver or radio that receives
cellular transmissions or has "full 800mz" coverage. "

Now shut the hell up and stop acting like a know it all.

You really should forward this information to the design engineers at AOL (and several others), who OBVIOUSLY wasted their time with this antenna, because Radio Shack has perfected the discone, and it's all a figment of the users IMAGINATION that the AOL blows the R/S away (for the most part), since all the parameters are etched in stone..... (;->))=
Cheers & beers y'all!
Don

Both Durham Radio and Radioworld, in the Toronto area have an inexpensive mount, so any dedicated radio store in the states must have it also.

You get two triangular metal mounts. The top part of each mount attaches to the scanner's bracket holes in the side of its case. A bracket secures the bottom of the scanner case. The isoceles side of the metal triangle has a toothed design that grips the carpet. It holds the scanner at a 45 degree angle so that the control surface and read-out point up at a useful angle. The mount was cheap. And you don't have to drill anything.

One of the Radio Shack's classics.
Date code is 3A3
What's included: Scanner, extendable antenna, I will even include the batteries I was using. Manual is available at radioshack.com
Frequency Coverage:
30-50 MHz.50-54 MHz.108-136.975 MHz.137-144 MHz.144-148 MHz.148-174 MHz.380-450 MHz.450-470 MHz.470-512 MHz.806-823.9375 MHz.851-868.9375 MHz.896-960 MHz
Condition: It's in a good condition. It has some scratches due to its use over time. I put it to a good workout. It seems to work fine. You may need to press the program button a little bit harder than the other buttons but besides that it seems to work fine.
Capabilities: I was able to pick up the cell phone "images" in the 852-866 MHz range. It can pick up cordless in the 43-47 MHz range using the included extendable antenna.
Price: $130. I will pay the shipping. I prefer paypal but will also accept money order.
Email me at dss@wongfaye.com if interested. Have plenty of ebay feedbacks.
The picture is located at http://www.geocities.com/cjenson10/pro39.GIF

You should save some - you'd probably have to have the radio
volume pretty high to hear it from its own speaker in a noisy
environment like a car, while you could have the volume set pretty
low running it thru the car speakers and raising it by the car stereo
volume. I would think much of the power is used by driving the
internal speaker, and the more you turn it up, the more consumed.
Of course, you should also be able to plug the scanner into the lighter
with an adapter and not use the batteries at all in the car.

Hi all,
I am considering buying a DJ-X2000. Since I have never owned an Alinco unit before, I would appreciate any comment on their equipment, and this radio in particular.

I intend to use it mainly for the VHF and UHF airbands, so I would appreciate any comment on the units performance, i.e. selectivity and sensitivity, on these frequencies.

As always, many thanks in advance

Troy

5266. Code 11??

Newsgroup: rec.radio.scanner

According to the recent usenet police, this is a "discussion" type of newsgroup. Although I've personally read the charter to this NG, and it does indeed say that this NG is intended to be a discussion newsgroup. I would avoid the newsgroup police and post to rec.radio.swap . People have argued over this, that "It doesn't say to NOT to do it", or the spammers' eye view of "everyone just use filters.". I know that the charters for NG's have been written at the time of NG creation. The chartors are written by the creator, and the creator writes how he wants his NG to be like. The creator does not think into the future when his NG will be used inappropriately, he just writes the charter to how he wants his NG to be like. So the statement "It doesn't say to NOT to do it." just doesn't apply. Because of the recent NG police watching over this NG, I would save myself a canned warning letter from my ISP, and post to rec.radio.swap .

Anyone have a definite release date for this model? I bought a Pro-92 and the reception (particulary for the 800 Motorola trunked system) was very weak. I am hoping (due to several bad reviews) that RS has made improvements to this Pro-93.

Since "John k." is obviously using an invalid ID and return e-mail address,
I'd take whatever advice he has to share with a LARGE grain of salt! There never
has been a prohibition of private for sale or for auction notices in this news
group until a bunch of self appointed news group busybodies, envious of others
who have something to sell and basically antithetical to the idea of private
bargain and sale transactions, began meddling by spreading misinformation to
various users ISP's. If any of you so harassed can determine from your ISP the
actual identity of the individual(s) making these complaints a number of users
would be interested in learning who it is with a view to making a cyberstalking
complaint to the appropriate service providers.

<sigh> I've read it, which you apparently haven't, very well. I realize it's rather impenetrable, especially on a screen instead of printed out where you can follow the nested clauses, EEng, but yes, it DOES prohibit you monitoring, listening, intercepting, at all. First section: You are prohibited from INTERCEPTING, regardless of what you do with it. That only affects whether you get only a fine, or a fine or jail time, in the penalty area. If what you do meets any of a) thru e), you're in violation. They're all seperate violations, you don't have to do both a) and b), etc.

---

(1) Except as otherwise specifically provided in this chapter any

person who -

(a) intentionally intercepts, endeavors to intercept, or procures any other person to intercept or endeavor to
^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^
intercept, any wire, oral, or electronic communication;

(b) intentionally uses, endeavors to use, or procures any other person to use or endeavor to use any electronic, mechanical, or other device to intercept any oral communication when -

(i) such device is affixed to, or otherwise transmits a signal through, a wire, cable, or other like connection used in wire communication; or

(ii) such device transmits communications by radio, or interferes with the transmission of such communication; or

(iii) such person knows, or has reason to know, that such device or any component thereof has been sent through the mail or transported in interstate or foreign commerce; or

(iv) such use or endeavor to use

(A) takes place on the premises of any business or other commercial establishment the operations of which affect interstate or foreign commerce; or

(B) obtains or is for the purpose of obtaining information relating to the operations of any business or other commercial establishment the operations of which affect interstate or foreign commerce; or

(v) such person acts in the District of Columbia, the Commonwealth of Puerto Rico, or any territory or possession of the United States;

(c) intentionally discloses, or endeavors to disclose, to any other person the contents of any wire, oral, or electronic communication, knowing or having reason to know that the information was obtained through the interception of a wire, oral, or electronic communication in violation of this subsection;

(d) intentionally uses, or endeavors to use, the contents of any wire, oral, or electronic communication, knowing or having reason to know that the information was obtained through the interception of a wire, oral, or electronic communication in violation of this subsection; or

(e)(i) intentionally discloses, or endeavors to disclose, to any other person the contents of any wire, oral, or electronic communication, intercepted by means authorized by sections 2511(2)(a)(ii), 2511(2)(b)-(c), 2511(2)(e), 2516, and 2518 of this chapter,

(ii) knowing or having reason to know that the information was obtained through the interception of such a communication in connection with a criminal investigation,

(iii) having obtained or received the information in connection with a criminal investigation, and

(iv) with intent to improperly obstruct, impede, or interfere with a duly authorized criminal investigation,

shall be punished as provided in subsection (4) or shall be subject to suit as provided in subsection (5).

5277. Frequencies Just North of Kansas City, Missouri

Newsgroup: rec.radio.scanner
Date: 2001-09-24 04:59:05 UTC
From: ke4yqz@earthlink.net
Message-ID: <3bae6ac8.88186360@news.earthlink.net>
Source record: 59494

There have been several messages left here in the past on what is there to listen to here in the Clay County/Liberty Missouri/North Kansas City area. I've never posted it before, but here is what I have on my scanners, and what they are primarily used for. I hope someone gains some knowledge by this message, and has fun using these frequencies as well. There is only one frequency I have in my banks that so far has never been used, but I continue to listen anyway because many counties here in Missouri _DO_ use this frequency for its stated purpose - 156.1500. Everything that I have read indicates that this frequency is used for the County Sheriff's Private Dispatch. The Clay County Sheriff's Office nor the Liberty Police Department uses this frequency, but I continue to listen "Just in Case" as well as when I'm traveling in and around the KCMO area.

Good Signals and Enjoy

Roger D. Cravens, Jr.
Liberty, Missouri
==========
---[Liberty/Clay County, Missouri]---
---[Master List, Last Update: 09/07/2001]---
---[800 MHz Frequencies Not Trunked]---
---[Call Signs (North & South): KLD836 (S) KLD837 (N)]---

I use the following list and information on all of my scanners.

Scanner Ident Use
------------------ ------------------------
(1) BC-200 Hand-Held/Mobile
(2) BC-245 Hand-Held/Mobile
(3) BC-780 Base
(4) Pro-2067 Mobile
(5) Pro-2006 Base
(6) Pro-2026 Stand-By Base/Stand-By Mobile

Scanner Bank #1 on my BC-780 is used for listening to Kansas City, Missouri frequencies on their trunked system.

Programmed In Scanner Banks #2 & #3 on my BC-780:

Programmed in Scanner Bank Number 0 on my BC-780 is for Kansas City, Kansas.

The weigh stations mentioned here are the North and South trucking weigh stations located on I-35 North and South approxmately half way between Liberty and Kearney.

469.8125 L WPIZ301 City of Liberty, Liberty Public Schools & School Busses

These 800MHz frequencies are not trucked, neither do they have radio traffic on these either. I've been monitoring these since I moved back to Liberty in December and I have yet to hear one work of Liberty/Clay County radio traffic. I've even checked the FCC's database of frequencies and by using the Call Sign of these frequencies, I was unable to identify what they are used for. As soon as I find out, I'll post that information here.

If anyone else out there happens to know what they are used for, I'm all ears - please share that information. They may be for sometime in the future when either Liberty or Clay County figures out what they are going to do with these. In the meantime, don't waste your precious channel spacing try to find out - up until now, it has been totally wasted channels.

There could also be other problems involved if he's trying to monitor
somebody on an EDACS trunked system. If it's EDACS, you not only need
to have all of the freqs programmed, but you even need to have them
programmed in a specific order (some even have blank channels that
cannot be ignored).

Dev wrote:

>You *still* don't know what you're talking about.
>Read my lips: IT IS ILLEGAL TO LISTEN ALSO!!!!!

Well I'll tell you what, you re-read all the sections that apply to
this topic and you'll see that they all talk about conveying the
content, whether by mouth, by pen and paper, or by tape or any other
method of conveyance as being illegal (besides manufacturing rules).
They do not stipulate that the mere listening is illegal. Now, since
you insist on becoming insulting rather than having a normal
conversation, you go on my kill list.

Hi Maz,

Checked that page. Seems like it could do the job.
Since they talk about a '6 meter' filter, I reckon that the cut off
point is around 50 MHz.

I found a site with highpass and lowpass filters where the values of
the components can be calculated online:
http://members.aol.com/maxfro/private/butter.html

However, the difference with these circuits and the one of the
6 meter filter, is that for the filters on the above mentioned page,
ground is just throughconnected. The 6 meter filter you refer to has
also a capacitor in the ground connection, which means that the
shield of the coax is basically disconnected from the scanner for
low frequencies.

If the shield of my coax cable is indeed working as a 'antenna', then
I think I need to build a filter like the 6 meter filter. With a 'normal'
LPF, the coax shield is still connected to my scanner.....

Did you build this filter, or now somone that has experience with it?

Thanks,
/Marc

Hi Troy,i did get your personal email btw,and will mail you personally soon,as i do more playing around.

as stated in previous postings in regard to the AOR8200 posts furter down,i will be specific to vhf/uhf airband,or rather mainly vhf

vhf airband have running most of the time at home,and it goes very well,shame about the scan speed,but not a real problem being slow,as with many scanners the way you program can affect scan speed,and on banks where i have gone in freq order it def seems faster.

i have a variety of cut and wideband "rubber duck" type antennas and i have used my tv active aerial and also my active aerial up in the loft,although until last night i was using the active with no power.

copy is generally clean with little breakthrough until you get to using the active aerials without the use of attenuation,an active aerial puts so much into the signal you have to attenuate,on some freqs 10 db is fine others 20 db,but when doing this it totally cleans the signal up,and now i can get ground tx from one NATS relay site and that includes Luton radar and Stansted radar that normally i cannot pick up by other means,as with a radio like i would expect for this price,there are other ways of cleaning up a freq to improve on reception in regard to single freq transmissions as in AM airband as follows.

tun into published freq,ie for me Essex radar 120.625,reset the step size to 50 hz,open squelch and just retune slowly as you would for sideband,and watch for the strongest peak on signal meter,and then store that to memory.

remember ATC relay stations are offset slightly anyway,and very rare to find any transmitter 100%,so always worth a play around,also of course initially reset the squelch just to the threshold,and then see how far you can go before ground transmissions are lost.

uhf airband so far i have only tried at airshows,as finding the time for milair is not always possible the times i work,but will report back.

but try one out,hopefully your local dealer will let you buy one,and if you think it is deaf or for whatever reason doews not do the job,then try for a refund or swap,a good dealer has to accept not all radios are going to do the job the way you want it.

as for other functions and thoughts on the ALINCO,then for those interested read the mails regarding this radio i posted on subject header "AOR8200" further down.

but i am very happy with this unit.

the radio is not as sensitive as some,at home using the supllied rubber is in most cases a waste of time,i would hope thst at the very least you use a more longer type rubber duck or banded/telescopic or of course a more potent aerial outside or in loft,if you do then this radio excels in all areas,out and about with sometimes my stubby aerial,in high rf areas it does whats required,it monitors those local signals i am after,without any real problems of pager interference and if there is then i can use various methods to clean the signal,then when i get back indoors connect up to something better,and it does the job again.

regards

Hi Marc
I havent tried this filter so i've no idea how effective it is.
Fortunately i've not had enough of a breakthru problem to warrant building
it. However it is fairly common cicuit as ive come across it in a few
publications. Being a ham design it will handle being used with a
transmitter. I take it you only need it for receiving so you could try
substituting the coils for axial-lead inductors.
Sorry i cant be of more help
Maz

If it's simple audio inversion, there is a free program that can be downloaded from the internet that will do it. ..... it uses your sound card..... A Google search should find it. If not, post the question here again and I'll dig through my bookmarks and see if I can find it.

Dan...
not so sure my harrasser was 'self appointed'. The email complaint letter to me was addressed to my 3 @home user names, 2 of which I forgot I even had, so I presume it was an official Nazi! I have demanded that the Police show me the exact source that specifically forbids a 'for sale' post to this NG. Their initial reference that I went to showed me NOTHING! I still await specifics from them. They actually threatened to TERMINATE my ISP service if I violate this 'rule' again, after my ONE violation of a so-far non existant rule...
So I expect from the @Home gestappo either a definite reference OR an apology....won't hold my breath on either!

Sex slavery thriving in Holy Land
By Megan Goldin NEVE TIRZA PRISON, ISRAEL

Christina, an 18-year-old university student from Moldova, has been bought and sold so many times she has lost count.

Christina, who declined to give her real name, studied classics and anthropology and played basketball as a hobby before she was lured from a rural town in one of Europe's poorest countries to sex slavery in Israel.

She is not alone.

Hundreds of thousands of 'Christinas' have been bought like merchandise, beaten, raped and chained in Western brothels in a 21st century form of slavery.

Christina received top marks in her anthropology studies but couldn't scrape together enough money to pay for photocopies, let alone buy textbooks.

Her dire economic situation made her fair game for women hired by criminal gangs to lure young, naive girls from Moldova and other financially-strapped Eastern European countries into prostitution with promises of large sums of money.

"I never thought I would actually have to do it," Christina said in bewilderment. "I thought once I arrived I would find a way to escape and find other work, as a waitress or something."

Christina was flown to Egypt where along with 20 other Moldovan and Russian women aged between about 18 and 24, she was escorted across the Sinai desert into southern Israel by a Bedouin smuggler.

They walked over dunes, eventually crawling under a barbed-wire border fence in the middle of the night.

Rolls of money changed hands between the Bedouin and the Russian-speaking men who bought the women. Christina doesn't know how much they paid, but the market price for a woman like her in Israel is around $8,000.

Frightened, an illegal alien, unfamiliar with Hebrew or Israeli geography, Christina had no real hope of escaping.

Instead she was taken to a brothel in northern Israel where she was forced to have sex with around 15 men every day, raped, beaten and threatened with

death if she ran away.

Eventually she did and is now a witness in a court case against the pimp who bought and mistreated her under a new Israeli law that makes human trafficking punishable by up to 16 years in prison.

"It's very easy. You just put them on a plane, walk them through the desert and you have slaves," said lawyer Nomi Levenkron, who represents women like Christina who are locked in a special wing of the Neve Tirza prison near Tel Aviv while they wait to testify or to be deported for entering Israel illegally.

Sex slavery, or white slavery as it was called in the 19th century, is almost as old as prostitution itself. But it has had a sudden resurgence since the collapse of the Soviet Union in 1991 devastated many eastern European economies.

Women who earn around $20 a month in Moldova are promised $1,000 a month abroad to work as prostitutes. It is a tempting offer for young women with bleak futures in their home countries or burdened with supporting a large family.

Sometimes the women don't know they are being sent to work as prostitutes and are told they will be waitresses or secretaries. Others are simply kidnapped.

Almost always they are trafficked by the local Mafia, frequently on a forged passport and threatened that if they don't behave, their family back home will suffer the consequences.

"They come from a place with no money, a very poor family in a poor village, looking for a better future," said Levenkron, a legal adviser to the Hotline for Migrant Workers, the only organization in Israel that helps former sex-slaves.

"These women are so na&#65533;ve, they don't realize people are lying to them," she said.

Israel is a popular destination for the human trade. It is not difficult to smuggle and hide Russian-speaking women in a country where almost a million people originate from the former Soviet Union.

"It's very easy for them to disappear between all the Russian-speaking women in Israel," Levenkron said. "It's very easy for traffickers to bring women here and when you have the supply, you have the demand."

A recent U.S. State Department report on human trafficking put Israel on a list of countries where the phenomenon is rampant. It has until 2003 to implement "minimum standards for the elimination of trafficking" or face stiff economic sanctions.

According to Zahava Gal-On, who heads an Israeli parliamentary committee on trafficking, that means deterring traffickers with hefty prison sentences instead of a few months in jail, the usual punishment handed down by Israeli

courts.

It also means putting women like Christina in safe houses instead of jail, thereby encouraging them to stay and testify.

In the past the victim has been locked up, sometimes for as long as six months, while the pimp is let off with a small fine or a brief stay in jail although under the law, it is the brothel owner, not the woman, who has committed a crime.

Like most former sex-slaves, Christina is penniless. Those lucky enough to be paid a paltry sum, usually a few dollars, by their pimps save the money to buy themselves freedom from their brothel-prisons. Often they are sold before they can do so.

"They are slaves and slaves of the worst kind," Levenkron said. "They are disposable people because it's so easy to buy a person."

Human trafficking is becoming a modern day scourge, said Tal Raviv, an advocate for the International Organization for Migration who works in Kosovo where trafficking is widespread.

"This has become a huge phenomena in the last decade," said Raviv during a visit to Israel. "The estimates are between half a million to 700,000 women trafficked every year just to the West, but the global figures are for millions."

Law enforcement officials say human trafficking is almost as rampant as drug and weapons smuggling. Many of the women being trafficked are forced to work in brothels.

In Africa and Asia, men are often sent to sweatshops and children forced to work in cocoa plantations in West Africa. Some of those trafficked are slated to be unwilling donors for black market organ transplants, Raviv said.

"Trafficking people is much easier than trafficking drugs and weapons," she said.

"It's easier because if you find drugs or the arms, there is no question something illegal has happened. But if you find a person with a passport, how do you know this person is not traveling out of their own free will?"

Raviv says the only difference between the 21st century version of slavery and that of the plantations in the Americas some 200 years ago is that today slavery is illegal.

"When you buy and sell a person, then it means a person is merchandise and that is slavery," Raviv said. "The person has no freedom, no control over his or her fate."

Don't forget that child sex and slavery is very common in Nepal, Thailand, and many parts of SE Asia. And that 35000 children starve to death in the world every day. Our problems seem pretty minor sometimes, but perhaps it is a good thing that we are suddenly awakened to all the nasty stuff that really is going on out there.

Hi. I'm looking for the 4(?) MURS frequencies, the old business "Color Dot" frequencies. I know one is 154.600. Does anyone have the others handy? These are the ones recently opened-up to the general public on a no-license-needed basis. I could dig through a pile of "PopComm"'s or "Monitoring Times", but don't know how far back to go. I'm hoping someone has them right there in their head or on their desk. Thanks.

The outlaw CBers in rec.radio.cb share your pain. They cry because
they want to sell illegal equipment and not be 'dissed' for it. They
often cite 'bigger crimes' as the reason they should be allowed to
break laws.

5300. AT&T 9311 Cordless Phone Frequencies

Newsgroup: rec.radio.scanner
Date: 2001-09-25 01:49:40 UTC
From: db77619@aol.com
Message-ID: <20010924214940.20490.00000603@mb-cn.aol.com>
Source record: 59417

Does anyone have a list of frequencies for the AT&T 9311 900 Mhz Cordless Phone(Base Frequencies)?
We just recently purchased one brand new.
I have the first frequency and need the other 29. I found the first frequency by searching the 900 Mhz Cordless phone band. I don't seem to have enough time to search for the others.
Thanks in advance.

The "self appointed" individual I was referring to was the jerk who made a complaint to your ISP ("@home"). I doubt that the people at "@home" just happened to notice this and take action on their own. No, so twit wrote and told them that what had done was wrong and they blindly took his word for it. If you can find out who did it, let us know on this news group and we can write that person's ISP and get him for cyberstalking.

Larry,
Given the number of flames, BS, spam, and outright crap posted to these NGs from people with @home.com addresses, I think you'd be better off with another server, anyway. I'd be embarrassed to have a home.com address, myself. Tell them either to substantiate their charges or apologize, or you'll switch servers and get everybody you know to do likewise. Hit them where it hurts, in the pocketbook.

BTW, got one of those consumer watchdogs at one of your local TV stations? If so, call them and complain about home.com's tactics. A piece on the air will really make them worry.

Mark

Can anyone confirm any search and recovery traffic? Are'nt the men reporting thier findings while still underground via radio?? Would this be FDNY? FEMA? NYPD?

Also can anyone confirm any FBI activity reguarding WTC.

There should be a lot of desaster related traffic, but I'm not even getting anything interesting from District 1. What should I be scanning?

Source record: 59426

For years, CTCSS was not commonly used, and we suffered without it.
But as the frequencies have become more crowded and overloaded, the
agencies using those frequencies have found it to be to their
advantage to implement CTCSS.

So it is used, it is available, and it is a simple, inexpensive
addition to common scanners, why should the scanner users be deprived
of it because some marketing nerd made a mistake. When scanners
without CTCSS do not sell as well as those with it, RS will see the
error of their ways.

After seeing what it can do to relieve the nuisance of distant,
undesired, agencies breaking squelch, I will never buy another scanner
without it!

RS take note!!

First of all, I'm not in your scanner NG. You've cross posted to I
don't know how many. Second, if you carefully read all the statutes
and laws, they repeatedly deal with the manufacture of current
systems. Some also make pointed reference to the legality of
listening in. They stipulate recording and making use of that
content. In the very few that mention listening, aka eavesdropping,
they are very specific about the conveyance of content. They mention
recording by any means, repeating by any means. They do not stipulate
listening EXCEPT to talk about the difference between One party and
Two party States. I already said that in that context, using a
scanner to listen to others in a conversation you are not part of is
illegal and I admitted I was incorrect on that point. What more do I
have to say and why would you insist on beating that dead horse? Are
you expecting me to repeat what I already said and beg your
forgiveness? I admit when I'm wrong. I did so like a man, now you
insist on continuing it? That's juvenile. By the way, how about
keeping your topics in your own channel and stop cross posting to

everyone. Goodbye. I will not address this issue again and all of you from alt.scanners or whereever you are owe the other NGs that are NOT about scanners an apology for wasting their time.

Search for BATTERIES on Yahoo, go to their ADVANCED SEARCH link, right by the SEARCH button. I only found 2 or 3 places that carried them last year when I was looking for them. Maybe, just maybe, one of the places was batteries.com. You might also look for a BATTERIES R US, or something like that in your area yellow pages, it's a place that will replace battery packs in almost anything they can open up, they may know of someplace that handles the dry-cell cases.

Good luck!

- Robyn

The listowner shut it down after the WTC attack. He felt that
posting military activity in time of war was inappropriate.

Agree or disagree, he is the listowner and he can shut it down
if he so chooses.

My hose doesn't have a radio...is this a common option? ;)

>all it is. is a headphone type male jack hooked up to a small transmitter.
>transmitting on normal fm radio.

Wasn't there somebody making one of these that actually hooked up
inline between the antenna and radio? Seems to me that it would be
less likely to get outside interference that way. If I could find one
like that, it would be preferable, IMO, to have a selector switch
and/or a mixer on the dash controlling what feeds it, than to have all
my gear running to Rat Shack external speakers that will soon be
competing with each other for the limited mounting space.

This came to me through e-mail. I do NOT know how true this is. So please be very careful.

Date: 9/25/01 9:08AM
Subject: FW: VOTE virus

Apparently, there is another new virus going around that comes as an e-mail
asking you to vote on whether we should go to war because of the World Trade
Center attacks. The attachment will be called WTC.EXE.

DON'T OPEN IT. DELETE IT. I hope we have learned the lesson from the NIMDA
virus from last week.

Norton doesn't have the virus files yet to detect and protect against this
yet, so use some common sense when opening e-mails. The e-mail may come from
someone you know, but that is how some viruses work.

As soon as new virus files are on the web-site, we will send them out.

Thanks.

It is true.
So far as I know 2 different firms say two different things.
One says it will mass delete html and dll files or all files
The other say it trys to reformat the hard drive.

Beware.

Lord Cyberwize

then buy a frequency counter.
900 Mhz cordless's freq change from one manufacturer to the next. but mose start around 902 and end at 906 about. for both sides of the conversation. but most still keep the 12.5 Khz steps. Some I have seen not. so. as there was someone who posted you some freqs. I forget where it was. probably in alt.radio.scanner. it is probably easier to scan them out. or use a frequency counter.

> enforcement, but who??

That's a BLM freq, usually associated with fire air-ground ops out west.
I'd heard they pulled most of their Law Enforcement folks from out here
in the west to support the disaster effort, so that may be who you're
hearing.

whoops, that was inre to 169.750, that you mentioned in the body, not
169.975.

169.975 I see listed as USFS Toiyabe National Forest, but also is marked
as "classified" in the consolidated freq list I have.

Bud, between the lines is a cut & paste from this newsgroup
from 2 years ago:
==

As long as you don't need an EL larger than 1.7"x 3.75", then I've
found a source...

Details on the EL kit are located here:

http://www.microstru.com/ELexp-kit.html

The kit is $22.95 and includes the EL and different color lenses.
If you just want the white EL panel, it sells for $15.95.

For pricing and info on ordering, follow this link:

http://www.microstru.com/EL-Lamps.html

While I haven't ordered any yet, I will this weekend. I saw their
ad in Nuts & Volts magazine. I have no affiliation with their
company.

Robert
http://dune.globe-net.net/~rc123/Robert/

There's the standard milair comms and then there's the fringe.
I'm looking for the U-2 and SR-71 freqs. that may be out there. We can assume that the U-2's are likely to be out of Incerlik, Turkey or Peshawar Pak. as the bases are there. This probably means VHF/UHF and scrambled. And way far away for us. Flights may originate from Edwards or Nellis which leaves this Easterner SOL. But true high fliers may have to resort to HF, especially if they're crossing Russia which may be implied in Putin's comments about "sharing intelligence."

But then we get to the fringe, the un-proven, the,.....plain weird?
I'm talking about all the rumors and supposed sightings of Aurora and other Black Craft (including pilotless) that have been discussed from Av.Week to Art Bell to the ng's and beyond. I've known more than one who's wondered what the heck that really was that went by almost too high to see and faster than a bat outa hell. And hey, wouldn't this be a great time for all those Area 51 saucers and projects to come up out of the Nevada desert and do some ass-whomping on Afganistan??

Now please, I'm not trying to draw flames, I'm just asking for comments on whether "mundane" freqs like U-2 and SR-71 are knowable. Also curious to speculate on what freqs might be used if some of the wilder stuff is flying around up there. I am not trying to come across as a kook. Instead I'm suggesting that everyone expects to SEE such things but as scanners we ought to be trying to HEAR them which (if they were real) would be a whole lot more likely. Thoughts???

The White slavery in Israel has gone on for at least two decades and was covered up entirely for more than a decade by all Western media sources who were quite aware of it. The "Russian Mafia" is still described by Western media sources as "Russian" with no mention that it is composed of Jews. This is done not for the bogus reasons given when confronted but because international crime-the mafia-is a Jewish controlled phenomenon. Visit the FBI website and peruse the "Most Wanted" lists. Jews are quite prevalent. They launder the money for Columbian drug lords and import weapons from Russia for the various communist rebel groups fighting the Columbian government and before long U.S. soldiers. When they are discovered and arrest warrants issued they flee for Israel where the Israeli government plays dumb, pretending that they are not in the country. Then these criminals train other Jews and send them out to continue the enterprise.

Most of the Ecstasy is manufactured in Israel and then smuggled to Europe and America.

It's also interesting to note that in the article the Israeli government is holding these raped and beaten women-many of whom were kidnapped and brought to Israel-in prison! When they are done with their bogus show trial of the Jew pimps, rapists and kidnappers they say without embassassment that these despoiled women will be deported back to the impoverished countries where they came from. Forget about becoming Israeli citizens and getting a real job. Israel is an explicitly racist state and these women are considered to be animals (goyim) by the racist, Zionist state of Israel.

Not sure. What kind of postings?

There have been many off-topic an irrelevant posts, so that is probably not it.

I've had a few of mine go MIA in other NG's.

Message-ID: <Vmds7.54134$n5.6082309@typhoon.nyc.rr.com>
Source record: 59374

Can the Frequencies on the BC 220xlt be change to find ones that do not come in already. I need to get the freq. range of 398.605 up to 399.030. If it can not be done, I guess the only other way is to buy a scanner that does, what is the cheapest scanner out that can pick these freq. up. Thanks for the time.

Peter

5360. Opto Scout and 2.4 Ghz phone

Newsgroup: rec.radio.scanner
Date: 2001-09-26 06:28:49 UTC
From: Rob <rb357@REMOVEbellsouth.net>
Message-ID: <3BB175A1.3119@REMOVEbellsouth.net>
Source record: 59376

Hey,

I have the early version of the Optoelectronics Scout frequency counter, the one that went all the way up to 2.8 Gigahertz. I've tried to use it to scan a 2.4 Gig cordless multi-line phone made by Siemens but it doesn't register.

When I hold it near the antenna (unit or base...the units don't actually have external antennas) the signal strength meter kind of immediately goes all the way up, but it doesn't light fully it just flickers or pulses and is very weakly lit.

Is this phone digital or otherwise encoded for the 2 handsets and multiple lines?

Thanks, Rob

OT stands for OFF TOPIC. Some people that pay child support also have scanners. Although they are not related, neither are most of the topics that are listened to on the scanner. I have owned a scanner for over 6 months now and I have never picked up on a conversation about scanners.

Believe it or not, the SR-71 pilots use standard aviation frequencies when arriving or departing US airspace (which ends at flight level 600, or roughly 60,000 feet).

The call sign in the past has been something like "Aspen-20".

I was told by a Denver Center Air Traffic Controller that they're supposed to announce their altitude as an offset from some secret reference, such as "Angels-200" so that a casual listener would never be quite sure how high they are.

I have no idea what other spy-planes do...

Sounds like what I hear as "10-50 PI" Which is auto accident with
Personal Injury. 10-50 PD would be with Property Damage only. The
Code could be a call for ambulance or as the other guy said it could
have been a call for the coroner if it was certain death.

Subject: FW: A new virus
Subject: FW: Fw: VIRUS WARNING
Virus Warning DO NOT OPEN "NEW PICTURES OF FAMILY"
This looks like a bad one that's coming. Forward this to others.
Please read and forward to everyone you know.....
DO NOT OPEN "NEW PICTURES OF FAMILY" It is a virus that will
erase your whole "C" drive. It will come to you in the form of an
E-Mail from a familiar person. I repeat a friend sent it to me, but called
& warned me before I opened it. He was not so lucky and now he can't even
start his computer! Forward this to everyone in your address book. I
would rather receive this 25 times than not at all. Also: Intel announced
that a new and very destructive virus was discovered recently. If you
receive an email called "FAMILY PICTURES," do not open it. Delete it right
away!
This virus removes all dynamic link libraries (.dll files) from your
computer. Your computer will not be able to boot up.

Here is something interesting: The Data frequency transmitts in the
clear.
That means that you can pick up all the Talk Groups but you will not
know as to which Talk Group goes with what service.

Well, how would he know what the specific virus was called if it erased
his computer? Most people don't remember the subjects of emails.

> I would rather receive this 25 times than not at all.

I wouldn't.

> Also: Intel announced
> that a new and very destructive virus was discovered recently. If you

And what, pray tell, is Intel doing making virus announcements? I'd
believe it if NAI, Symantec, or F-Secure made such an annoucement, but
Intel makes chips and doesn't track viruses.

> receive an email called "FAMILY PICTURES," do not open it. Delete it right
> away!

Has anyone every gotten an email with a subject as outlined in the
"virus warning" emails? I never have.

> This virus removes all dynamic link libraries (.dll files) from your

What models are you considering? What are you using for a comparison?

When you say hf scanner are you talking about a scanner that also
covers vhf/uhf along with hf?

5382. mobile scanner gets a hum when I accelerate

Newsgroup: rec.radio.scanner
Date: 2001-09-26 21:36:54 UTC
From: quickdrawf150@hotmail.com
Message-ID: <5b71d1ee.0109261336.74ab34af@posting.google.com>
Source record: 59298

I have a RS PRO-2066 which WAS on a bracket near the floor of my truck. Put it into the dash a few weeks ago and now have a hum which is there--and it increases in pitch as I accelerate. The only difference between before and now is that instead of using the speaker on the unit as I did when it was mounted in the bracket, I have an external speaker mounted so I can hear transmissions instead of the sound going to the middle of the dash. Any suggestions as to what is causing the hum and how I can eliminate it?

In an Astro system that contains any analog talkgroups the control data will be analog, thus able to be decoded by current edition Trunktrackers and the various trunked data decoding programs.

Many Astro systems are set up this way. In the Chicago area a regional dispatch service has an Astro system with several analog talkgroups in use by Public Works and Street Department personell. This allows the use of cheaper, non-digital radios for less demanding applications.

Since we all know that Astro (as well as it's cousin APCO25) is not encryption then "In the clear" might be a bit misleading...

Any hum that varies in pitch when accelerating is most likely coming from the alternator. As someone else pointed out, grounding your rig could help resolve the problem. Otherwise take a look some noise proofing methods used by hams and cd'ers for years. I think a small amount of capacitance across the power leads or one at the truck's coil were common, however I don't recall the exact method.

Oh, so according to you, people that use the scanner newsgroup should only discuss scanners, is this correct? There's been some virus warnings, how do these relate to scanners? What about discussing the World Trade Center bombing, does that have to do with scanners? Are you the moderator of this newsgroup? Most newsgroup policies hold that off topic posts should contain OT in the subject line. If you are the moderator of this newsgroup and OT posts are not allowed, please let me know, I will apologize and will never post an OT post here again.

If you are not the moderator of this newsgroup, why do you think your judgement is correct re: OT being inappropriate and being worse than OT posts without OT in the subject line?

I don't know about this newsgroup, but in others OT in the subject line is the appropriate way to discuss off topic subjects.

Scanner buffs should be able to discuss what they want, if it is of no interest to you, mark it read and go on. The majority of the posts are not something I'm interested in but that doesn't mean others should not discuss what they want. But, there are a few posts on here that discuss what I'm interested in or what I have question on.

Are you the one that was reporting abuse for the FA eBay ads?

It could very well be from your fuel pump(s) - I saw a product
once that one wired into the fuel pump circuit to kill noise. I
also recall a BIG problem with Ford Taurus fuel pumps several
years ago, where they disturbed CB's and many other electronics
because they threw off so much RFI. Is your truck a Ford? Maybe
it's got the same pump(s). [many F.I. vehicles have 2 fuel pumps]

Sure is... Otherwise, you can feed your scanner audio through your computer, and use some software to descramble it. Note, however, that the only type of descrambling either the software or the kit/unit will do is speech inversion. If this fits your needs, let me know, and I'll dig up some links for both....

is it a highpitch humm or a lower type one. most common is the alternator one. sometimes happens when you have a ground loop. That means that your antenna may be grounded but not the radio anymore. Sounds like a grounding problem and you are receiving alternator RF.
but. you may get away with re-grounding it to the body of the vehicle.

Excellent Frequency List

Do you want a List of Frequencies
That originate around your home?
Any address can be done.

I can get you that list!

I live just outside Cleveland and ran the list, I received over 4,000 freq's.
Many of which I was not aware of.
Many businesses, schools, malls.

E-mail me if intrested, $5 for complete list, 5 mile radius
(any bigger the file gets too large, If you really want bigger I can try!)

Hello-

I just purchased the PC connection cable for the PRO-92 and was wondering if anyone has the Radio Shack part number for the 2.5mm to 3.5mm adapter plug, which is needed to complete the connection?

Also, can anyone recommend a part number for some rechargeable batteries for the PRO-92 ?

Thanks!

Where did you purchase this cable? What cable is it? The "PC
connection cable for the PRO-92" does not require any adapters.

Go to any RS store and ask for four (4) Nickel Metal Hydride AA
batteries.

Walt

Mine doesn't do that, except on a trunk system that I was working.
Once I set it up for trunking, the beeps were minimized.

This does not only happen in Israel, it happens in all of eastern
AND western Europe as well. OVer half the prostitutes in Denmark are
foreigners by now, and too scared that they would be sent back home
to help the police.

Their prostitution is not the problem. It is the symptom of poor
countries.

> The "Russian Mafia" is still described by Western media sources as "Russian" with no
> mention that it is composed of Jews. ...

Now we have some racism. No matter what religion or color, it is
CRIMINALS doing the drug and slave traffic'ing.

And no, I am not jew, colored, muslim or anything like that. I am
ateist with a christian value background, and according to a little
dark skinned dark haired guy I knew, who was member of the danish
nazist party,my racial traits places me as a supreme human being.

I live in a country where the general income level is high enough
that we don't need a common enemy to blame for not getting a job
from sitting in front of the TV drinking beer and wanking off all
day. You need to get out. If you can't find a job, create your own
business - That is what you probably blame the jews for doing.
Here in Denmark, we actually like the immigrants/refugees who opens
their own business instead of staying on social welfare.

>... Israel is an explicitly racist state and these women
> are considered to be animals (goyim) by the racist, Zionist state of Israel.

Have you seen how arab countries treat asians, even asian muslims ?
The treat them worse than slaves.

The world is complicated. And don't see a symptom as the a sickness
in itself.

thanks for the input thus far. answers to your questions:

the hum is low pitched, but it grows higher as the RPM's increase.

the frame of the unit was not grounded previously, so that shouldn't be an issue. if it is, instruct me how to properly ground it to avoid the ground-loop effect.

the antenna is the same one as before.

the truck is a ford.

the CB in the truck does not have this problem with a hum and it's wiring is routed the same as the scanner.

thanks for your help.

Source record: 59250

Sure you can subscribe to percon for $24 for 6 months or $45 for one year.
Also this is a better list than that I have gotten off of the per-con database.

Of course frequencies are public information. but they are not always sent
directly to you in a nice list.

I knew there would be those of you that would not like the fact that I would
like $5 for my time. For those I say your not the person who might be
intrested in this list. If you are happy with your old per-con databases
enjoy. For those who would like a good current list around your area then all
I am asking is for $5 for my time.

I have been a scanner and shortave listener for 15 years and after printing
this list I actually found more frequencies that I did not know about before.

I am not forcing anybody to do this... If you are intrested e-mail me...If not
keep spending your money on old outdated books and CD's.

Thanks for listening - Scannerfreq1

Hey by the way, I just went to cityfreq.com and looked up my city.

Guess what they still have the old low band frequencies listed for the police and fire...

well they are both on 400 mhz. now.

I seriously hope that is not your main reference for frequencies.

try a wire that is grounded. or a "-" from your wire harness. if it goes away then it is a ground problem. can always try as others said a capacitor. or a filter. but low. could be a ground problem. I have the same problems some day with my scanner too. next day it is gone. I shook my coax and such. never had it happen. still don't know what has caused it. but my 2 meter mobile has no problem. hope you find the problem.

Sorry, I didn't realize you were this groups moderator deciding what can and can not be discussed here. You need to get busy, it looks like 20-25% of the posts on here are not scanner related.

Here's an example of your logic applied to different subjects:

They shouldn't have signs cautioning for dangerous situations, it makes it even worse because they knew there was a dangerous situation.

Very similar to your reasoning:

OT in the subject line makes it worse because it shows the poster knew it was off topic.

My subject line had OT in it so people that didn't want to read off topic posts could just skip it. I was trying to be as considerate as possible by only posting a short summary in the newsgroup and including a link to a more detailed account. I guess you weren't bright enough to skip off topic posts if you didn't want to read them.

If you're against OT posts, why would you make 3 OT replies?

You should get a transciever instead of a scanner, that way you could tell people what they can discuss. I heard some ladies on a ham radio talking about what they ate for breakfast, you need to get on to them. Go get'em Barney Fife!

That's correct the cable does not require any adapter if you bought it
from GRE.

You may be thinking of the AC Power Cord which does require an adapter
to fit the 92.

On Thu, 27 Sep 2001 22:07:20 GMT, Walt Bertram
<wbertram@worldnet.att.net> wrote:

I reviewed my comment and I didn't say anything about the per-con site. Why would I pay them when i'm not going to pay "U"? All one has to do in sit in front of their computer and do a little searching. Heck, your just a pup at 15 years, there are thousands of us out there with over 30 years at this. For myself, I started back in 1963. It doesn't matter how many years one has enjoyed the hobby, it's what they have learned and enjoyed about it. I like sharing my experiences and knowledge with anyone that needs assistance. By the way, that's at NO Charge. Enjoy the hobby, share.

Well, my question would not be to slam you for what some could get for free.
Rather I'm curious about *active* vs. assigned freqs.

Case in point; The McDonald's Corp. uses a range of freqs. nationwide. But
that doesn't mean all of them are used in your particular area. Even regional
lists are not right on. I found my local McD's freqs. on the web, but had to
wade through a list to find the ones for my actual local McD's.

So let's try a challenge; My QTH is Fairfax City, VA. Zip 22030. My callsign is
KG4JBM so you can get everything off that if you need more info.

CHALLENGE IS:

There are 3 McD's (2 with Drive-thrus) and 1 Burger King and 1 Wendy's
in my hometown. Both the BK and Wendy's have drive-thrus. All are within
3 miles of my QTH. What are the Drive-thru freqs. (where Joe Public orders
his food) of at least 3 of the 4 Drive-thrus ??

Get it right and I will admit it here in public and send you my five dollars.
No out-to-get-you attitude on my part. Just a Challenge.
Andrew

Go to my site and see if you can find an advertisement anywhere.

You should check things out before you shoot your mouth off.

I run the www.PA-SitRep.com page and the PA-SitRep mail list at my own expense and the list is free to join to anyone willing to abide by the list rules and posting protocol. I pay for the server space and mail list out of my own pocket so that I can avoid any advertisements or marketing ANYWHERE on the page or the list.

>.THNAK YOU!

That should be "THANK YOU". And you're welcome.

How does spread spectrum work?

Thanks, Rob (remove in email)

5453. Pennsylvania Amateur Emergency Net notification delivery system

Newsgroup: rec.radio.scanner
Date: 2001-09-28 17:02:42 UTC
From: pasitrep@pa-sitrep.com
Message-ID: <3bb4ad26.268219774@news.city-net.com>
Source record: 59268

I own and operate www.PA-SitRep.com and the PA-SitRep (Pennsylvania [Emergency] Situation Report) e-mail list. I am opening the list for an additional function for hams: Amateur Radio Emergency Net Activation notification.

Subscriptions to the list are free, subscribers may unsubscribe at any time and the list contains no spam, chat or advertisements. List traffic is limited to ONLY major emergency situation reports within the State of Pennsylvania and the list traffic is extremely low volume. I am opening the list to all HAMS within the State of PA and offering Net Controls the ability to notify all list members of Pennsylvania EMERGENCY Net Activations via the mail list to the list subscribers' digital cell phones or their home computers.

The PA-SitRep list message posting protocol caters to the limited character capacity of digital cell phones and text pagers by limiting the first portion of the posted message to 100 characters or less. Information on how to use your digital cell phone for alphanumeric messaging is available on my site at the following address:

http://www.pa-sitrep.com/cell.htm

If the need arises to call up an Emergency Net within the State of PA, the net control could simply post a message to the list. Here's an example:

07/21/01 14:30 WPA: TORNADO WARNING - SKYWARN NET ACTIVATED ON 149.090

Within about 5 - 60 seconds after sending the message to the list, all list subscribers with digital cell phones (and home PC e-mail users) will receive the message. It's an easy and free way to reach multiple users instantly via e-mail to cell phone. Additionally, all subscribers will receive the emergency situation reports that are posted to the list.

Information regarding the list is available at:
http://www.pa-sitrep.com/pasitrep.htm

To subscribe, visit:
http://pa-sitrep.com/mailman/listinfo/pa_pa-sitrep.com

Please consider the use of the list and any questions or comments may be e-mailed to:
pasitrep@pa-sitrep.com

Thanks very much and we'll look forward to your participation.

-Dave (KB3FXI)

Source record: 59271

Spread Spectrum operates usually by "Frequency Hopping," that is, the transmitter and receiver jump between different frequencies several times per second (it would still work if it went slower than that because you are usually transmitting human voice conversations, and if you could only hear such a conversation 1 second out of every 10 then the dialogue would be unintelligible) and both transmitter and receiver know a "key" which indicates which frequencies will be used and when. This is sometimes called "Code Division Multiple Access" or "CDMA." The general principle is called "Frequency Division Multiplexing" and trunked radio systems operate in this fashion. The reason it is called "trunking" is that several different private conversations can be held on one frequency but within a "band" on that frequency, e.g. 1.25 MHz on either side of 900 MHz.

5455. Re: scanner or transceiver?

Newsgroup: rec.radio.scanner
Date: 2001-09-28 19:36:12 UTC
From: Harris <n2ah@spam.sprynet.com>
Message-ID: <Mi4t7.30057$w7.5764468@news02.optonline.net>
Source record: 59272

"Scanners" that cover hf through UHF tend to perform marginally at hf. On the other hand, some of the better hf receivers are as good if not better than some tranceivers. Depends on what you want to do. If you want to listen to Shortwave broadcasts in AM, a receiver with selectable wide/narrow selectivity would be an advantage.

If you are planning to get a ham license to operate on hf, a transceiver with general coverage receive is the way to go (but expect to pay >$1500). Otherwise, an hf receiver makes more sense. Many transceivers operate off 12V and require a separate power supply.

Be careful when you say "same capabilites." Just because two radios cover the same frequencies doesn't mean their performance is the same.

Roger,

These groups may of help to you:

alt.support.single-parents
alt.support.parents.with-custody
alt.support.divorce

Many of us have had challenges surrounding child support, public aid and such however, qualifying a post with OT doesn't justify
such. Perhaps you can find satisfaction in the above forums.

Hi
We just replaced the battery pack after 2-3 years thinking that it would fix the problem but it does not. Even when we use the power plug, it runs for a minute or two, the battery light flashes as though it's low on juice, and the screen goes blank (scanner turns off). We're ready to call the 1-800 number but I would prefer to get info from you guys/gals first off. Can anyone help?

Helga

Sounds Like the Batterys are dead! Try this:
Leave radio on, UNTIL COMPLETELY DEAD...THEN,
CHARGE THE BATTERIES, FOR THE MAXIMUM TIME, then try it again. A common problem w/ Ni-Cads, are, they have to be "FULLY" Discharged, at least 1 time, before they'll retain a Charge!!

Another reason I wont use Ni-Cads, by the way..., you have a common problem, to a lot of Bearcat owners.., happened to my 2500, and 60-xlt, mor ethan once!! I hope i helped ya, if not.., try BUYING NEW BATTERIES, THEN MAKING SURE YOU FULLY DISCHARGE EM, THEN RE-CHARGE EM, MAX.! BYE (-:

Thanks for the info. So why does this prevent my Opto Scout from reading
the frequencies being used?

Is there a freq. counter or scanner that can receive these frequencies?

Thannks-These are new batteries!!! just opened the package tonight. I
think the only way I can do a total recharge is to plug the power plug
into the "power-in" plug on the scanner becasue there is no other way to
charge the batteries...right?

I have one and it's great for tracking, once you learn how!!! Good for
setting up scan lists and easily switching or mixing them..It does NOT work
with GE systems (?EDACCS??) or something like that...

The answer, as best as I can say it, is that your Opto Scout tunes into a certain frequency and stays there, just like an AM radio in your car, etc. The scanner does not know the code used to control the frequency hopping, and cannot figure it out on its own. It scans sequentially up and down within the range you specify. All a scanner does is hunt up and down the "dial" as if it had a tuning knob with a motor on it, and the "motor" stops when the signal strength is big enough. Some later model cars have "scanners" in them, but just in the standard broadcast band. If several conversations are happening on the same frequency band, your scanner will not differentiate between each conversation and the result to you, the listener, will be gibberish. This is the whole point, that is, security to any punk, drug dealer, etc. who has a cell phone--and where would we be without that??

There are "trunk tracking" scanners out there which can lock into trunked radio system frequency hopping transmissions, but the algorithms used to control such hopping appear, so far as I can tell, to have passed into the public domain--unlike cell phone CDMA algorithms.

Feel free to ask more questions if you wish and I will do my best to answer them. My knowledge of this subject is quite limited, otherwise I would be listening in on cell phone calls right now!

Regards,

Ian D.

Check your wall wart (AC adapter or power plug). It has probably died. I saw the same symptoms about a year ago with a friend's SC150. Mine has a no-load output of 16.40 volts. You can get a replacement at Radio Shack, just take the old one in to match the ratings when selecting a replacement.

Hey I will concede the active vs. assigned argument.

As far as paying for the list I am amazed that a $5 list is a sin but their are books and cd's that cost much more and cover way more than you need. In my experience once you buy the books the info is outdated before the book hits the shelf.

Enjoy your scanning - Scannerfreq1

5482. FS: PRO-2050 TrunkTracker $100 + Shipping

Newsgroup: rec.radio.scanner
Date: 2001-09-29 13:53:23 UTC

Message-ID: <7490b6ed.0109290553.4fc5ee41@posting.google.com>
Source record: 59199
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I have for sale a Radio Shack PRO-2050 TrunkTracker. Radio is in "used" condition. Some scratches on display. Body of radio has hole in each side as radio was mounted in a mobile environment. Operating condition is 100% sound. Trying to sell to gather money for new radio purchases. This radio is currently at work collecting dust in my shack. :). I have the original box and manual.

Asking $100 PLUS UPS ground shipping. Payable in advance or COD with Postal Money Order only. Please contact me at halligan@mediaone.net if interested. Thanks for reading.

Scott

5483. FS: PRO-2004 w/HB232 interface and many mods $350

Newsgroup: rec.radio.scanner
Date: 2001-09-29 13:57:27 UTC
From: halligan@mediaone.net
Message-ID: <7490b6ed.0109290557.62c8ca29@posting.google.com>
Source record: 59200
Cross-posted to: rec.radio.scanner,alt.radio.scanner

For Sale: Realistic PRO-2004 Scanner with External HB232 computer-control interface. Pictures available on request. Detailed information follows:

The Radio: Radio is in very good condition. It has been through numerous modifications:

1. Full coverage restoration.
2. Increase from 300 to 400 channel capacity.
3. Capability of 36 independent "banks" of 400 channels each, controlled by toggle switches in rear of radio. Only one 400 channel "bank" can be scanned at a given time but it affords for numerous different scanning schemes selected by the switch positions.
4. Pushbutton control on rear of radio to select/deselect keyboard beeps.
5. Removal of 120 volt power transformer to accomodate interface and HB232 makings, radio runs on 12 volts only.
6. Front mounted large signal meter. Mounted to the left of the volume control. As a result the headphone jack is not available.
7. FM discriminator tap on rear of scanner for data decoding.
8. Radio did suffer the infamous PRO-2004 "poor solder" syndrome and has had such problems repaired.
9. Blue keyboard overlay exhibits 40 channel per bank setup.
10. LCD display is in good shape.
11. Radio has always been in an indoor environment; never used in a mobile capacity.

The HB232 Interface: Mounted in 8"W x 6"D x 3"H project box. Connects to radio through short DB25 male cable to DB25 connector mounted vertically on rear of radio. Connects to computer via DB9 Female cable. Original HB232 software burned onto CD will be included, as well as the DEMO version of Redshift, a Windows 95/98/ME software package for the 2004/HB232 combo.

Miscellaneous: PRO-2004 Owner's manual and PRO-2004 service manual. Pictures are available on request and will be e-mailed to you directly. Power supply is NOT included; I run the radio directly from a custom power setup in my shack. There was never a "wall wort" type supply included with this radio and as previously mentioned the 120V transformer was removed to accomodate the DB25 connector and internal makings of the HB232 interface. The power supply is a standard coaxial type and is readily available for cheap $$ at Radio Shack.

Reason for selling: Not seeing much use in my shack these days; I'm gathering money for other radio purchases.

Price: $350 O.B.O., including UPS COD shipping.

Method of payment: Advance payment by POSTAL money order only, or UPS COD with POSTAL money order only.

Please do not reply here, if interested E-Mail me at halligan@mediaone.net

Thanks for reading.

Haven't seen the 2002 version, yet. I got the 2000 version.
I guess it has the same stuff as the book. I got some good
trunking info out of the book. Didn't have the CD with me
at the time. For the non-trunked they have a lot that is not
used or maybe used for data.

I hear it's supposed to be out 01 OCT.

specifically the power of CNN. All around the world we are subjected to >>3
or 4 huge news distributors, and one of them - as you well know - is CNN.
Very well, I guess all of you have been seeing (just as I've been) images
from this company. In Particular, one set of images caught my attention: the
Palestinians celebrating the bombing, out on the streets, eating celebration
sweets and making funny faces for the camera.
Well, THOSE IMAGES WERE SHOT BACK IN 1991!!! Those are images of
Palestinians celebrating the invasion of Kuwait! t's simply unacceptable
that a super-power of communications as CNN uses images which do not
correspond to the reality in talking about so serious of an issue.

P.S. All a frequency counter will tell you (if you can get close enough to the transmitter you are investigating) is 1) whether it is transmitting, and 2) what frequency it is transmitting on (as long as the bandwidth is narrow enough in a certain time period, controlled by the "gate speed" on the counter). It is then up to you to guess whether the message being transmitted on the carrier wave (the frequency of which the counter has told you) is being sent via AM, FM, "public domain" trunked radio, or the cellular variety of CDMA. If it is the first two, then the priciest piece of hardware you need in order to get the voice, etc. message out of the signal would be a scanner--perhaps even an ordinary AM or FM radio. The third type of signal requires more-expensive-but-still-legal trunked radio scanners to listen in on, and you can buy such scanners off the shelf at Radio Shack. If the signal is of the fourth type (this includes some of the later model cordless phones), and if you are like me, then you are right back in the woods!!

I have one still in occasional use after over 20 years! Here is a
quote regarding this scanner from the review FAQ that used to be
regularly posted in this group (Note: This scanner does not cover
800 MhZ band.):

"BC300 (Electra): 1979 vintage. 50 channel top of the line
scanner. Service Search feature contains 11 ROM banks of
preprogrammed channels See US patent 4,270,217, granted May
26, 1981. Switching power supply failure noted in early
units due to insufficient capacitance - component value was
changed in newer units. Schematics show at least 100
components changed between earliest and later units. Preset
squelch pot, mounted internally on circuit board,
misadjusted in new units - adjustment usually required after
burn-in period. Good sensitivity. Built in clock. I leave
it on 24 hours a day. This is a favorite. See US patent
4,409,688, granted 11/11/83 for further insight."

In Motorola II Trunktracking, is it possible to identify/track an individual user's ID with a scanner? My 235 and 895 do not, as far as I know. They are just capable of ID groups of 5 digits. A policeman told me his dad has a scanner that displays his son's individual radio ID of 6 or 7 digits when he keys the mike, the number that is affixed to the police radio. Bull or fact??? If fact, what kind of scanner can do this????

God, don't you wish you could get one as surplus<grin> ?

Anyway, so what? NASA has performed numerous military missions
in its lifetime. STS-36 as an example. (I'm showing off here as I went
to H.S. with the mission specialist Pierre Thout.) In fact, recently de-
classified material on "Operation Corona" (from the Discovery Ch.
of all places) has shown that even those early flights with dogs and
chimps were really cover stories for intel ops. utilizing early satellite
photos.

But an even more interesting question would be; If the SR-71 is now
"junk", what's taking its' place?? The gov't anounced several years
ago its intention to change its' sat. program from large expensive
platforms to many, many smaller, cheaper vehicles. This apparently is
still going forward. But the whole argument for U-2's and SR-71's was
that sats are forever prisoners of their orbital data where as aircraft
could be directed anywhere.

The two basic theories put out by rags like Pop. Sci. and Avi. Week.
are: 1. The Aurora Program. 2. Pilotless hi-G manuever craft.
The Aurora appears to be what was in the sixties called the " X-30",
I believe and was several generations beyond the Shuttle which was
"X- 26" (?? Not sure, help me out). Basically Aurora is a space shuttle
capable of take off and landing without large, disposable, expensive
"booster rockets" like the Shuttle now uses. Best evidence for the
Aurora is a throwaway mention is '84 (?) budget and even better that,...
although Area-51 has been much quieter supposedly, the runway is shown
by public domain sat photos to have been lengthened by 6 miles!! Total
length is like 12 or 18 miles. The longest on earth !! Nothing known needs
it. Why was it built???

The pilotless craft have less evidence but it's interesting to note that they
are basically what you and I would call UFO's. Hence, the interest in them.
It should be noted there is lots of military interest in pilotless craft but
most are small RC "toys" that benefit from modern high-tech.

Bottom line is always assume the Gov't is 10 years ahead of what you think you know and then be prepared to be surprised if you learn the truth. If any of these craft are real they would be the ultimate in our aviation inventory and hence, the ultimate in milair scanning to snag one. I have no proof or special knowledge one way or the other. but I have theories and I feel certain that my goverment does a much better job of insuring domestic tranquility than we ever find out about and I think that Bin Laden doesn't have a rat's ass chance in Hell if we're prepared to really go after him with our hands untied. You don't need to be deaf, blind and ignorant to be loyal.

Attack on America: How to Find Terrorists and Spies on the Air - Part 2

Ham radio operators across the nation and around the world continue
to look for ways to help in the United States war against terrorism.

Some are still providing communications in the New York City area
Others have headed the call by FCC Special Counsel Riley Hollingsworth to
watch the radio spectrum and report suspicious transmissions.

Last week, monitoring specialist Joe Schroeder, W9JUV, gave us a bit of
insight into what to listen for on the high frequency bands. Joe is
back with a look at the spectrum above 50 MHz and the way that terrorists
cells might try to use it: FRS probably not an option because there are
just to many people on it.

There's not so much the chance of being overheard and having the whistle
blown.

More likely, some kid is going to inadvertently break in and break up
the communications. Especially in a mall or some downtown area.

CB at 27 MHz is also a no. I would also say that the ham bands are not a
good alternative because there is to much of an opportunity for radio

amateurs to come across such communications and recognize that it is not
normal ham radio talk. What hoes on in the Amateur VHF and UHF bands is
so normal sounding that many hams readily recognize all of the voices. If
there was something abnormal going on it would stick out much more than
on an HF band like 20 or 40 meters.

One thing Riley Hollingsworth suggested was to tape any suspicious
communications. If you do, we would suggest using fresh tape and also
using a direct connection to your recorder from your station receiver.

This will eliminate the chance of room noise obscuring what you are trying to record.

And, if you do happen across something that needs to be reported probably the best place to forward it is directly to the Federal Bureau of Investigation. The FBI has set up a toll free number for leads or other information on the terrorist attack. It's at: (866) 483-5137

A worthy idea. Some suggestions and comments if you don't mind.
I'd also like a copy of Part 1 of this.

First, it would be good if the Commish would make it clear that in this time of crisis Hams and others are freed from the usual threat of prosecution and/or seizure of equip. or license if they can demonstrate at least good intentions. A formal premission would be re-assuring.

Second, is this extended to non-ham bands such as scanners are often used for? What about "unintentional" monitoring of Cell-freqs.? If pertinent info is forwarded to FBI.etc. will the party that sends it be free from having their non-blocked scanner consficated and themselves prosecuted ? More than remarks by the Commish are needed.

Third. It's easy enough to escape detection by most Hams or Scanners , just speak in Arabic, There's already some Russkies rag-chewing every nite on 17M and 40M too. Not to mention the Hispanic chit-chat. They all sound like they're running FT-1000's at 1500W+ and you wonder how many actually have a ticket. Regardless, suspect that translating Arabic is a job for Sigint, not Hams, Scanners.

So where does that leave us?? Well, if I were a No-Good-Nik I'd be thinking whatever I used would need DX, Power, and ability to Duck and Run. To me that is easy choice. Pirate Radio. You can find web sites that'll teach you how. No license needed. You can step on or in-between comm'l and Gov't freqs. and at 0400Z who's to know? If you can get a Comm'l pilot's license you sure as hell can learn to throw a Pirate Station together and use PGP-protected e-mail to arrange the sked.

Then again, why not just rely on PGP to begin with?? Example; I have a friend who recently returned from 2 years as Peace Corps in Morroco. They stayed in a small towm, several thous. pop. No local radio or TV. But there was an E-CAFE installed in their 2nd year there. Go figure !! and yes, the locals are learning to use it. Alahu Akbar, Baby.

Bottom line: Happy to help out. Will report anything suspicious and will make an effort to take a pause from chasing DX once in a while to do some scanning. In the meantime however, would suggest that Intel had their chance at this guy. Now it's time for some 7.62mm Full Metal Jacket. Hopefully in LARGE numbers. How to sort them out?? Easy. Start at North end and march to South end. Kill everyone who raises a gun, refuses to surrender, tries to run, or refers to the USA while using harsh or colorful language.

No disrespect to you personally, just my 2cents worth. Hope to hear back from you.

For those of you who do not know out there, that in fact 800 Mhz is possible with the Pro-35. Although you cannot physically do any modifications inside the case to achieve this, you can however purchase a "GRE Super Converter" (I'm not sure if you can get these anymore). I've got one on my Pro-35 and it's been running great for years. You have to occasionally change the 9-volt battery inside, but all that takes is removing 2 screws. With the converter attached between your antenia and the unit, set your scanner to scan between 410 and 512 Mhz and BANG! 800 Mhz.

His Dad may have a system transceiver that will display the individual
units designation. Or a scanner and computer running one of the trunking
diagnostic hobby programs, this might have that capability.

When listening to tampa pd, how do you know what the other channels are...say for example...an officer requests another one to go to channel 8...how do you know or find this channel? On the police call CD, a certain freq does not show when you search the p for police, but it shows up on the local. What is the difference?...do most police department use local gov freqs for the additional channels such as chan 8? I would like to have all the freqs that tampa pd uses.

TIA

I have a Uniden CR-2021 SW radio that I would like to trade for a 1st generation trunk tracker hand held scanner - BC 235, Pro 90 or Pro 91. The Uniden is 6 to 7 cosmetically, some scratches and nicks on the case but all the features work and reception is very good on all bands. Listed below are the features of the CR 2021 radio from dxing. com. Radio comes with copy of manual.

General Coverage Communications Receiver Rating (1-5): ***(3)
Made In: Taiwan 1983-1984 Voltages: 120 VAC 11-16 VDC
Coverage: 150-30000 kHz Readout: Digital LCD 1.
Modes: AM/SSB-CW Selectivity: 3/2.5 kHz
Circuit: Triple Conversion Physical: 13x6.5x3.5" 5 Lbs.
Features: &#65533;" Head. Jack, S/Battery Indicator, Attenuator, BFO, Tone, 3 Position RF Gain, Sleep Timer, Two Tuning Steps, Carry Handle, Record Jack, Sweep, Antenna Trimmer, Keypad, 12 Memories, Dial Lamp, Dial Lamp Switch, Antenna Terminals.
Accessories:
New Price: $150-170 Used Price: $100-130
Comments: The CR-2021 can store six FM stations and six non-FM stations for a total of twelve. Operates from six C cells and two AA cells. The Realistic DX-400 is similar, but features an analog S-Meter rather than a LED S-Indicator.

5520. Pro 2067 Question. When I turn the scanner on }?

Newsgroup: rec.radio.scanner
Date: 2001-09-30 15:06:47 UTC
From: "Chad C. Graybill" <chadg@epix.net>
Message-ID: <byGt7.9646$KD2.3877580@news1.epix.net>
Source record: 59236

Bought a pro 2067 scanner for our new fire engine. Hooked it up.
When I turn it on, it reads Welcome dual trunking etc. then it automatically goes to bank 00 channel 00 and stays their. It will not start scanning until I hit the "scan" button. Is there a way to automatically have the scanner starting scanning at startup??? Or is this unusual for this unit?
Thanks in advance.

From: Andy Brinkley <andy@brinkleyelectronics.com>
Message-ID: <3BB7574B.BF923A44@brinkleyelectronics.com>
Source record: 59241

I have for sale (1) ICOM R-10 handheld Scanner, is in like new condition (9.5+). Complete with rubber duck antenna, belt clip, instruction manual (never opened - still in sealed plastic) , battery charger, nicad rechargeable batteries, original box.

This radio covers from DC to daylight, never carried, was used as a base scanner. Radio is guaranteed not to be DOA, works 100% other than the nicads which probably need to be replaced with Ni-Mh batteries if you are going to carry it much.

$225.00, includes shipping to lower 48 states.

I am looking for a two way radio that gets a "wide" range of frequencies. I used to own an Alinco DJ-X2000 Scanner that was excellent, but it lacked what I needed. I am currently looking for a two-way radio, that can get frequencies of that caliber. I know it is impossible for a scanner to have mods to do this, so I am asking, is there a two-way radio transmitter or transceiver that is cabable of doing this? I am looking for handheld. I realize this may be against some people's views, but I assure you my use of such an item is completley harmless. Thank you for your time and please respond if you have any information that could help me.
